Re: Interceptor Trench Modifications at the Bridgeton Landfill
Bridgeton Landfill, Bridgeton, Missouri
Permit No. 0118912

Dear Mr. Nagel:

Bridgeton Landfill, LLC (“Bridgeton Landfill”) continues to evaluate and implement improvements to enhance the landfill gas extraction system at the facility. These efforts are summarized each quarter in the Landfill Gas Corrective Action Plan Quarterly Report. As part of this on-going effort the Bridgeton Landfill is preparing to install two additional sumps as presented in Attachment A. The plans include the installation of two new extraction sumps. The sumps are proposed to increase liquid removal capacity and thus improve the efficiency of interceptor trenches adjacent to the South Quarry.

The Bridgeton Landfill is preparing to install these sumps in early September of 2015. The actual date of installation will be based on weather and the procurement of necessary materials. The as-built location of the sumps will be included in the subsequent Quarterly Infrastructure Update to be submitted to the Missouri Department of Natural Resources.

Please feel free to call if you have any questions or wish to discuss this improvement.

Sincerely,

Brian J. Power
Environmental Manager
Bridgeton Landfill, LLC.
