

Bridgeton Landfill, LLC

November 5, 2014

Mr. Chris Nagel
Director, Solid Waste Management Program
Missouri Department of Natural Resources
1738 East Elm Street
Jefferson City, Missouri 65101

Dear Mr. Nagel:

**Corrective Action Plan
Bridgeton Landfill, Bridgeton, Missouri
Permit No. 0118912**

Enclosed with this letter is the "Corrective Action Plan, Potential Northward Progression of Subsurface Smoldering Event" ("Plan") prepared by Civil & Environmental Consultants (CEC). This Plan was prepared to respond to the formal notice to prepare a Plan which was conveyed in your letter dated October 7, 2014.

As you know, Bridgeton Landfill has made extraordinary—and successful—efforts to keep the subsurface smoldering event (SSE) from entering the North Quarry. In addition, Bridgeton Landfill has already voluntarily moved forward with actions specified in the MDNR-approved North Quarry Action Plan.

This Corrective Action Plan incorporates the current efforts and existing commitments, and presents the possibility of additional heat extraction if needed in the future. This Plan will be updated based on the results of the current, ongoing heat extraction pilot study and the conditions that exist at the time of a future Plan update. The first progress report for the pilot study will be presented with the Monthly Data Submittal to be submitted on January 20, 2015.

If you have any questions or comments, please contact me at 314-744-8165.

Sincerely,

Bridgeton Landfill, LLC

Brian Power
Environmental Manager
