SUBJECT: 2006 Census of Missouri Public Water Systems

The Department of Natural Resources is pleased to publish the annual census of Missouri Public Water Systems. This census provides government entities, the regulated community, and citizens of the state with detailed information regarding the volume, sourcewater type, population, and other characteristics of water systems. In addition, test results for selected chemicals are included along with the types of treatments used by Missouri water systems.

We hope this report will serve as a helpful reference guide when you are reviewing a permit, inspecting a water system, or simply wanting to know more about the water coming out of your tap. While this publication provides summary information about individual water systems, you may be interested in additional resources as well. For the first time, the census will be available online. It will be found at the Water Protection Program page at:

http://www.dnr.mo.gov/env/wpp/pub/index.html

In addition, our Annual Compliance Report (ACR) indicates violations by individual water systems as well as statewide data for the calendar year. This is available at:

http://www.dnr.mo.gov/env/wpp/fyreports/index.html

If you find information in the census that is incomplete or inaccurate, need additional copies, or have other comments and concerns, please contact the Public Drinking Water Branch at (800)361-4827 or (573)751-8330.

III. COMMUNITY WATER SYSTEM INVENTORY INFORMATION

COMMUNITY WATER SYSTEM INVENTORY INFORMATION
INTRODUCTION
KEY TO CODES AND ABREVIATIONS

The Community Water System Inventory Information section contains data on community public water systems regulated by the Missouri Department of Natural Resources' Public Drinking Water Branch. A community public water system serves at least 15 service connections and is operated on a year-round basis or regularly serves at least 25 residents on a year-round basis (Missouri Safe Drinking Water Regulations 10 CSR 60-2.015). These systems include but are not limited to cities, water districts, subdivisions, mobile home parks, and institutions.

Community Water System Inventory Information provides basic information such as the required water system operator level and the required distribution system operator level, the year the system began providing water, the ownership type, the number of people served and the number of service connections. These systems are divided by type of community into three alphabetical lists. The first list contains city systems, the second list contains water district systems, and the third list contains subdivision, mobile home park, institution and miscellaneous systems. This section also provides a list of systems that sell water and whom they sell to and a list of systems that buy water and whom they buy from.

AVG = Average

MGD = Million Gallons per Day

WATER SYSTEM OPERATOR LEVEL (Listed 1st, if available, under Operator Level, example: "A1", or "A "):

A – Requires a minimum of 5 ½ years of plant operator experience.
B – Requires a minimum of 3 ½ years of plant operator experience.
C – Requires a minimum of 1 ½ years of plant operator experience.
D – Requires a minimum of ½ year of plant operator experience.

DISTRIBUTION SYSTEM OPERATOR LEVEL (Listed 2nd, if available under Operator Level, Example: "A1" or " 1"):

1 – Requires a minimum of ½ year of distribution operations experience.
2 – Requires a minimum of 1year of distribution operations experience.
3 – Requires a minimum of 3 years of distribution operations experience.

Both the Water System Operator Level and the Distribution Systems Operator Level for community public water systems are classified according to system capacity, source of water, character of water, character of water being produced, complexity of treatment and other physical conditions that may affect a system. The department uses this classification system to determine the certification level necessary for the chief operator to supervise the operation of a facility (Missouri Safe Drinking Water Regulations 10 CSR 60-14.010).

OWNER TYPE:

F – Federal Government
P – Private
S – State Government
L – Local Government

SOURCE WATER PERCENTAGES:

PCT GRD = Percent of Source that is Ground Water
PCT PUR GRD = Percent of Source that is Purchased Ground Water
PCT PUR SUR = Percent of Source that is Purchased Surface Water
PCT SUR = Percent of Source that is Surface Water

IV. NON-COMMUNITY WATER SYSTEM INVENTORY INFORMATION

NON-COMMUNITY WATER SYSTEM INVENTORY INFORMATION INTRODUCTION

The Non-Community Water System Inventory Information section contains data on non-community public water systems regulated by the Missouri Department of Natural Resources' Water Protection Program, Public Drinking Water Branch. There are two types of non-community public water systems. One type of non-community public water system is a transient non-community public water system. This is a public water system that is not a community water system, which has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least sixty days out of the year (Missouri Safe Drinking Water Regulations 10 CSR 60-2.015). This means that for the most part the population changes daily. These systems include, but are not limited to recreational areas, restaurants, highway rest areas, hotel/motels, campgrounds, etc. The second type of non-community public water system is a non-transient non-community public water system. This is a public water system that is not a community water system and that regularly serves at least twenty-five of the same persons over 6 months per year (Missouri Safe Drinking Water Regulations 10 CSR 60-2.015). This means that for the most part, the same population returns daily to the facility. These systems include but are not limited to factories, large businesses and industries, schools, etc.

Non-Community Water System Inventory Information contains a complete listing of active non-community water systems. This list contains the system name, county of location, system identification number, system type and season begin and end dates. The non-community listing is first by county and then alphabetical within the county.

VII. CHEMICAL ANALYSES OF COMMUNITY WATER SYSTEMS

CHEMICAL ANALYSES OF COMMUNITY WATER SYSTEMS
INTRODUCTION
KEY TO CODES

The Chemical Analyses of Community Water Systems section contains data on inorganic chemical test results. Under Missouri's Public Drinking Water Regulations (10 CSR 60-4), systems utilizing surface water sources in whole or in any part are required to submit water samples every year for chemical analyses. Those systems utilizing only ground water sources are required to submit water samples for nitrates every year and inorganic chemical samples once every three years. These analyses are performed by the Missouri Department of Natural Resources' laboratory. Results are given in this section for a group of common inorganic chemicals that each community system tests for.

Below is a list of chemicals included in this section. In parentheses behind some of the chemicals are suggested upper limits or regulatory maximums given in Milligrams Per Liter. In addition to the below named chemicals, analyses was also completed for the following inorganic chemicals: Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, and Thallium. The complete results of all of the chemical analyses are on file in the office of the Missouri Department of Natural Resources' Public Drinking Water Branch.

AG – Silver (100.0)
ALK – Alkalinity
CL – Chloride (250.0)
F – Fluoride (2.0)
K – Potassium
MN – Manganese (50.0)
NO3 – Nitrate (10.0)
SO4 - Sulfate (250.0)
