

Section (6) Permit Required

Regulated Activities:	<p>The construction or modification of a minor installation, or process, such that the construction or the modification has the potential to emit at or greater than the <i>de minimis</i> level of a regulated air contaminant, but less than major source levels per year</p> <p>Minor installations are those with potential emissions greater than the <i>de minimis</i> levels, but less than the major source threshold. Existing installations with potential emissions greater than the major source threshold for NSR permitting do not qualify for minor permits unless the project emissions are solely hazardous air pollutants <u>and</u> a maximum achievable control technology (MACT) standard applies to the equipment.</p>
Fees:	<p>\$250 filing fee \$75 per hour of review time and modeling time</p>
Required Documents:	<p>Two copies of the completed application form</p> <p>Supplemental documentation, such as air quality modeling, may be required, depending on pollutants emitted. Air quality increments as well as air quality standards apply to these permits.</p>
Length of Permit:	<p>This permit does not expire. However, construction must commence within two years of permit issuance. The permit may be revoked if construction is not started within this time frame. The applicant may apply for an extension for commencing construction as long as the conditions of 10 CSR 10-6.060 (6)(E)2 are applicable.</p>
Pre-Construction Prohibition Waiver:	<p>An applicant may request a pre-construction prohibition waiver. This allows <i>construction</i> of the applicable equipment. The department may grant the waiver if the applicant meets all criteria for a waiver. An applicant must receive the permit prior to start-up of operations. A fact sheet on pre-construction waivers is available at http://dnr.mo.gov/pubs/pub2014.htm.</p>
Processing Time:	<p>State regulations require the department to issue a minor new source review permit within 90 days of receipt of a complete application. If additional technical information is requested during the permit review, the time spent by the applicant preparing this information is not included in the 90 days.</p>
Pre-application Meetings:	<p>Pre-application meetings or conference calls are encouraged for projects with potential emissions of particulate matter or sulfur oxides greater than 50 tons per year. These projects do require air quality modeling and are more complicated in nature.</p>
Public Participation:	<p>None required</p>
Applicable Statutes:	<p>RSMo 643.075</p>
Applicable Rules:	<p>10 CSR 10-6.060, 10-6.020, and 10-6.010</p>
