PART 70
PERMIT TO OPERATE

Under the authority of RSMo 643 and the Federal Clean Air Act the applicant is authorized to operate the air contaminant source(s) described below, in accordance with the laws, rules, and conditions set forth herein.

Operating Permit Number: OP2011-020C
Expiration Date: May 8, 2016
Installation ID: 071-0003
Project Number: 2014-05-036

Installation Name and Address
Ameren Missouri Labadie Energy Center
226 Labadie Power Plant Road
Labadie, MO 63055
Franklin County

Parent Company's Name and Address
Ameren Corporation
P.O. Box 66149, MC 602
St. Louis, MO 63103

Installation Description:
Ameren Missouri Labadie Energy Center is a power plant that converts the energy from coal and other fuels to produce steam that powers electrical generating equipment. There are four tangentially fired boilers on site. The installation has coal unloading, conveying, stockpiles and pulverizing equipment to supply the coal fired boilers. The facility is a major source of CO, CO$_2$, NO$_x$, PM$_{10}$, PM$_{2.5}$, SO$_x$, VOC, HAP, Hydrogen Flouride (7664-39-3), and Hydrogen Chloride (7647-01-0).

This is an amended operating permit to modify the installation's CAM plan; therefore, the expiration date has not changed.

I. Installation Description and Equipment Listing

INSTALLATION DESCRIPTION

Ameren Missouri Labadie Energy Center is a power plant that converts the energy from coal and other fuels to produce steam that powers electrical generating equipment. There are four tangentially fired boilers on site. The installation has coal unloading, conveying, stockpiles and pulverizing equipment to supply the coal fired boilers. The facility is a major source of CO, CO2e, NOx, PM10, PM2.5, SOx, VOC, HAP, Hydrogen Flouride (7664-39-3), and Hydrogen Chloride (7647-01-0).

Amendment A modified the reasonably anticipated operating scenarios and added the newly applicable requirements of MACT UUUUU.

Amendment B modified the installation’s CAM plan to reflect newer stack testing data.

Amendment C modifies the date for repeat CAM testing. The installation is undergoing control system upgrades in anticipation of MACT UUUUU. The control system upgrades will be staggered due to timing, site congestion, resource constraints, and unit availability. CAM testing will occur in a timely manner after the control system upgrades have been completed. Attachment G was added to the permit which contains a list of abbreviations and acronyms used throughout the permit.

EMISSION UNITS WITHOUT LIMITATIONS
The following list provides a description of the equipment that does not have unit specific limitations at the time of permit issuance.

Description of Emission Source
3,382,751 gallon Empty Tank, TK-1
15,000 gallon Diesel Equipment Fuel Oil Storage Tank, TK-2
7,930 gallon Emergency Diesel Fuel Oil Storage Tank, TK-3
7,930 gallon Empty Tank, TK-4
Two 12,000 gallon Turbine Lube Oil Storage Tanks, TK-5 and TK-6
16,000 gallon Turbine Lube Oil Storage Tank, TK-7
Two 13,825 gallon Turbine Lube Oil Reservoirs, TK-8 and TK-9
Two 10,290 gallon Turbine Lube Oil Reservoirs, TK-10 and TK-11
8,000 gallon Used Oil Storage Tank, TK-12
1,000 gallon Kerosene Storage Tank, TK-13
Eight 200-500 gallon Fuel Oil Storage Tanks, TK-14 through TK-21
Two 300 gallon Fuel Oil Tanks for Diesel Driven Fire Pumps, TK-22 and TK-23
354,888 gallon Start-Up Fuel Oil Storage Tank, TK-24
1000 gallon Diesel Fuel Oil Storage Tank, TK-25
49,875 gallon Empty Tank, TK-26
Two 650 gallon Emergency Diesel Generator Day Tanks
Two Fuller Model 48DS8 Jet Pulse Dust Collectors
II. Plant Wide Emission Limitations

The installation shall comply with each of the following emission limitations. Consult the appropriate sections in the CFR and CSR for the full text of the applicable requirements. All citations, unless otherwise noted, are to the regulations in effect as of the date that this permit is issued.

None.
III. Emission Unit Specific Emission Limitations

The installation shall comply with each of the following emission limitations. Consult the appropriate sections in the CFR and CSR for the full text of the applicable requirements. All citations, unless otherwise noted, are to the regulations in effect as of the date that this permit is issued.

PERMIT CONDITION (B-1 through B-4) – 001
Boilers Units 1, 2, 3 and 4
10 CSR 10-6.260 Restriction of Emission of Sulfur Compounds

**Emission Limitations:**
The permittee shall not cause or allow emissions of SO₂ into the atmosphere from the combustion of any fuels in excess of 4.8 pounds of SO₂ per mmBtu actual heat input on a daily average. In addition, each source may emit SO₂ at a rate not to exceed the allowable rate by more than 20 percent for not more than three days in any one month.

**Monitoring/Recordkeeping:**
1. Install, maintain, and operate a CEMS for measuring the SO₂ emission rate (lb SO₂/mmBtu) in accordance with 40 CFR Part 75 and NSPS Appendix A, Method 19.
2. Comply with the quality assurance requirements in 40 CFR Part 75, Appendix B.
3. Conduct, on the frequency required in 40 CFR Part 75, Appendix B, a Relative Accuracy Test Audit on the CEMS, pursuant to 40 CFR Part 75, using Reference Method 6c for SO₂, or equivalent EPA approved method.
4. Retain hourly records of the SO₂ emission rate (lb SO₂/mmBtu) in accordance with 40 CFR Part 75 and NSPS Appendix A, Method 19.
5. All records shall be maintained for five years and shall be made available for inspection to the Department of Natural Resources upon request.

**Reporting:**
1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.
2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.
3. The following shall be submitted in quarterly reports:
   a) Exceedances of the SO₂ limitations set forth in this rule recorded by the monitoring system. If any exceedances were recorded, give the day, length of time the emission unit was out of compliance, and a data summary of the exceedance (the data summary shall consist of the magnitude in actual pounds of SO₂ per mmBtu actual heat input averaged over the day). Additionally, the report shall give a detailed explanation of why the plant exceeded (nature and cause) and corrective action taken to bring the emission unit back into compliance.
   b) Report when the monitoring system is down due to inoperative periods, repairs, malfunctions, or monitor adjustments. The report shall give a reason why the monitor was down, the duration of the downtime event, and provide the percent of the total operating period the monitor experienced downtime. The report shall distinguish between those downtime events that were due to quality assurance activities and those events that occurred for other reasons.
   c) If no excess emissions occurred within the quarter and the continuous SO₂ monitoring system has not been inoperative, repaired, or adjusted, that information shall be included in the report.

4. Quarterly reports shall be postmarked by the 30th day following the end of each calendar quarter.

**PERMIT CONDITION (B-1 through B-4) – 002**

<table>
<thead>
<tr>
<th>Boilers Units 1, 2, 3 and 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 CSR 10-6.220 Restriction of Emission of Visible Air Contaminants</td>
</tr>
</tbody>
</table>

**Emission Limitation:**

1. The permittee shall not cause or permit to be discharged into the atmosphere from these emission units any visible emissions with opacity greater than 20 percent.

2. Exception: The permittee may discharge into the atmosphere from any source of emissions for a period(s) aggregating not more than six minutes in any 60 minutes air contaminants with opacity up to 40 percent.

**Monitoring:**

The permittee shall install, calibrate, operate and maintain a certified COMS in accordance with NSPS Performance Specification 1 with an automated data acquisition and handling system for measuring and recording the opacity of emissions (in percent opacity) discharged to the atmosphere through the stack.

**Recordkeeping:**

1. Retain a file (hard copy or electronic version) of all information reported in the quarterly reports:
   a) Recordkeeping shall consist of the following information as applicable:
      i) Summary information on the number, duration and cause (including unknown cause, if applicable) of exceedances, as applicable, and the corrective actions taken;
      ii) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable).
      iii) If no excess emissions have occurred during the reporting period and the COMS has not been inoperative, repaired or adjusted, this information shall be stated in the report.

2. Retain a file (hard copy or electronic version) of all six-minute opacity averages and daily Quality Assurance/Quality Control Records.

3. All records shall be made available for inspection to the Department of Natural Resources’ personnel upon request.

4. All records must be maintained for five years.
**Reporting:**
1. Quarterly reports shall be postmarked no later than 30 days following the end of each calendar quarter. The reports shall be submitted to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102.
2. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.
3. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

**PERMIT CONDITION (B-1 through B-4) – 003**

Boilers Units 1, 2, 3 and 4

10 CSR 10-6.405 Restriction of Particulate Matter Emissions From Fuel Burning Equipment Used for Indirect Heating

40 CFR Part 64 Compliance Assurance Monitoring

---

**Operational Limitation:**

1. The permittee shall perform stack testing for filterable PM using Method 17, Method 5 using a front half filter temperature of 160°C ± 14°C, or other method upon written approval by the Air Pollution Control Program by no later than the dates provided in the following table:

<table>
<thead>
<tr>

<tr>
<td>3</td>
<td>No later than June 30, 2016</td>
</tr>
<tr>
<td>4</td>
<td>No later than August 31, 2015</td>
</tr>
</tbody>
</table>

a) The permittee shall submit a Proposed Stack Test Plan to the Air Pollution Control Program no later than 30 days prior to the date of stack testing so that the test plan may be reviewed and approved and an observer may be present during the testing.

2. The permittee shall apply for an operating permit significant modification or permit renewal application to update the CAM monitoring approach within six months of completion of the above required stack testing. The significant modification application or permit renewal application shall include stack testing results and either:
   a) A new filterable PM to Opacity correlation along with proposed opacity levels for excursions and exceedances. All calculations for the correlation shall be included as well as explanations for the determination of the excursion and exceedance levels. Or
   b) Proposed PM levels for excursions and exceedances from a PM CEMS calibrated for MACT UUUUUU compliance. All calculations for the correlation shall be included as well as explanations for the determination of the excursion and exceedance levels.

3. The permittee shall perform repeat stack testing every three years:
   a) The permittee shall submit a Proposed Stack Test Plan to the Air Pollution Control Program no later than 30 days prior to the date of stack testing so that the test plan may be reviewed and approved and an observer may be present during the testing.
   b) The permittee shall perform the stack testing using Method 17, Method 5 using a front half filter temperature of 160°C ± 14°C, or other method upon written approval by the Air Pollution Control Program for filterable PM and Method 202 or Method OTM28 for condensable PM.
c) The permittee shall apply for an operating permit significant modification or permit renewal application to update the CAM monitoring approach within six months of completion of the above required repeat stack testing. The significant modification application or permit renewal application shall include stack testing results and either:
   i) A new filterable PM to Opacity correlation along with proposed opacity levels for excursions and exceedances. All calculations for the correlation shall be included as well as explanations for the determination of the excursion and exceedance levels. Or
   ii) Proposed PM levels for excursions and exceedances from a PM CEMS calibrated for MACT UUUUU compliance. All calculations for the correlation shall be included as well as explanations for the determination of the excursion and exceedance levels.

**Emission Limitations:**
The permittee shall not emit PM in excess of 0.12 lb/mmBtu of heat input for each individual boiler.

**Monitoring:**
1. The permittee shall install, certify, operate and maintain a certified COMS with an automated data acquisition and handling system for measuring and recording the opacity of emissions (in percent opacity) discharged to the atmosphere in order to provide a reasonable assurance of the performance of the ESPs. Previously installed and certified monitoring systems that conform to provisions of the Performance Specification 1 for COMS meet the monitoring requirements.
2. The performance requirements for the COMS and an excursion with its associated averaging time for each emission unit shall be as specified in the following table:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Opacity</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Measurement Approach</strong></td>
<td>COMS</td>
</tr>
<tr>
<td><strong>Indicator Range</strong></td>
<td>Based on stack test data submitted by the permittee, the baseline three-hour average opacity is in the range of 8-10 percent for each boiler. An excursion is defined as a one-hour average opacity greater than 34 percent for Boilers 1 and 2, 24 percent for Boiler 3, and 26 percent for Boiler 4. Excursions trigger an inspection, corrective action, and a reporting requirement. Based on stack test data submitted by the permittee, a PM exceedance has occurred if the three-hour average stack opacity exceeds 36 percent for Boiler 1, 38 percent for Boiler 2, 25 percent for Boiler 3, and 28 percent for Boiler 4.</td>
</tr>
<tr>
<td><strong>Performance Criteria</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Data Representativeness</strong></td>
<td>Each boiler discharges to a dedicated stack with no bypass capabilities. Each stack is equipped with a COMS located downstream of the ESP that complies with the applicable version of NSPS Appendix B, Performance Specification 1 (PS-1).</td>
</tr>
<tr>
<td><strong>Verification of Operational Status</strong></td>
<td>Not applicable since the selected monitoring approach utilizes existing COMS that were initially installed and evaluated per the applicable version of PS-1.</td>
</tr>
<tr>
<td><strong>QA/QC Practices and Criteria</strong></td>
<td>Perform a daily zero and calibration drift check, periodic cleaning of optical surfaces and other periodic QA/QC checks as specified in applicable version of PS-1.</td>
</tr>
<tr>
<td><strong>Monitoring Frequency</strong></td>

</tr>
<tr>
<td>Reporting</td>
<td>Summary information on the number, duration, and cause for any excursions and COMS downtime will be reported on a semi-annual basis.</td>
</tr>
</tbody>
</table>

3. Proper maintenance. At all times, the permittee shall maintain the monitoring equipment, including but not limited to, maintaining necessary parts for routine repairs of the monitoring equipment. [§64.7(b)]

4. Continued operation. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permittee shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions units are operating. Data recorded during monitoring malfunctions, associated repairs, and required quality assurance or control activities shall not be used for purposes of this part, including data averages and calculations, or fulfilling a minimum data availability requirement, if applicable. The permittee shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the monitoring to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions. [§64.7(c)]

5. Response to excursions or exceedances: [§64.7(d)]

a) Upon detecting an excursion or exceedance, the permittee shall restore operation of the pollutant-specific emissions unit (including the control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. The response shall include minimizing the period of any startup, shutdown or malfunction and taking any necessary corrective actions to restore normal operation and prevent the likely recurrence of the cause of an excursion or exceedance (other than those caused by excused startup or shutdown conditions). Such actions may include initial inspection and evaluation, recording that operations returned to normal without operator action (such as through response by a computerized distribution control system), or any necessary follow-up actions to return operation to within the indicator range, designated condition, or below the applicable emission limitation or standard, as applicable. [§64.7(d)(1)]

b) Determination of whether the permittee has used acceptable procedures in response to an excursion or exceedance will be based on information available, which may include but is not limited to, monitoring results, review of operation and maintenance procedures and records, and inspection of the control device, associated capture system, and the process. [§64.7(d)(2)]

6. Documentation of need for improved monitoring. After approval of monitoring under this part, if the permittee identifies a failure to achieve compliance with an emission limitation or standard for which the approved monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing indicator ranges or designated conditions, the permittee shall promptly notify the permitting authority and, if necessary, submit a proposed modification to the Part 70 permit to address the necessary monitoring changes. Such a modification may include, but is not limited to, reestablishing indicator ranges or designated conditions, modifying the frequency of conducting monitoring and collecting data, or the monitoring of additional parameters. [§64.7(e)]
Quality improvement plan (QIP):
1. The permittee shall develop and implement a QIP if any boiler has accumulated excursions exceeding five percent duration of the operating time during the reporting period.
2. Elements of a QIP: [§64.8(b)]
   a) The permittee shall maintain a written QIP, if required, and have it available for inspection. [§64.8(b)(1)]
   b) The plan initially shall include procedures for evaluating the control performance problems and, based on the results of the evaluation procedures, the permittee shall modify the plan to include procedures for conducting one or more of the following actions, as appropriate: [§64.8(b)(2)]
      i) Improved preventive maintenance practices. [§64.8(b)(2)(i)]
      ii) Process operation changes. [§64.8(b)(2)(ii)]
      iii) Appropriate improvements to control methods. [§64.8(b)(2)(iii)]
      iv) Other steps appropriate to correct control performance. [§64.8(b)(2)(iv)]
      v) More frequent or improved monitoring (only in conjunction with one or more steps under §64.8(b)(2)(i) through (iv)). [§64.8(b)(2)(v)]
3. If a QIP is required, the permittee shall develop and implement a QIP as expeditiously as practicable and shall notify the permitting authority if the period for completing the improvements contained in the QIP exceeds 180 days from the date on which the need to implement the QIP was determined. [§64.8(c)]
4. Following implementation of a QIP, upon any subsequent determination pursuant to §64.7(d)(2) the Administrator or the permitting authority may require that the permittee make reasonable changes to the QIP if the QIP is found to have: [§64.8(d)]
   a) Failed to address the cause of the control device performance problems; or [§64.8(d)(1)]
   b) Failed to provide adequate procedures for correcting control device performance problems as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. [§64.8(d)(2)]
5. Implementation of a QIP shall not excuse the permittee from compliance with any existing emission limitation or standard, or any existing monitoring, testing, reporting or recordkeeping requirement that may apply under federal, state, or local law, or any other applicable requirements under the Act. [§64.8(e)]

Recordkeeping:
1. The permittee shall comply with the recordkeeping requirements specified in §70.6(a)(3)(ii). The permittee shall retain records of monitoring data, monitor performance data, corrective actions taken, any written quality improvement plan required pursuant to §64.8 and any activities undertaken to implement a quality improvement plan, and other supporting information required to be retained under this part (such as data used to document the adequacy of monitoring, or records of monitoring maintenance or corrective actions). [§64.9(b)(1)]
2. Instead of paper records, the permittee may retain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable recordkeeping requirements. [§64.9(b)(2)]
3. All records shall be kept for five years and be made available to any Missouri Department of Natural Resources’ personnel upon request.
**Reporting:**
1. The permittee shall submit monitoring reports to the permitting authority in accordance with §70.6(a)(3)(iii). [§64.9(a)(1)]
2. A report for monitoring under this part shall include, at a minimum, the information required under §70.6(a)(3)(iii) and the following information, as applicable: [§64.9(a)(2)]
   a) Summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken; [§64.9(a)(2)(i)]
   b) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable); and [§64.9(a)(2)(ii)]
   c) A description of the actions taken to implement a QIP, if a QIP is required, during the reporting period as specified in §64.8. Upon completion of a QIP, the permittee shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or exceedances occurring. [§64.9(a)(2)(iii)]
3. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.
4. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.
5. Emissions in excess of the level of 0.12 lb/mmBtu of heat input during periods of start-up, shutdown, and malfunction shall be reported as required by the provisions of 10 CSR 10-6.050, *Start-up, Shutdown and Malfunction Conditions*. Based upon information submitted by the permittee and any other pertinent information available, the Director shall determine whether the excess emissions constitute a malfunction, start-up, or shutdown and whether the nature, extent, and duration of the excess emissions warrant enforcement action.

   **PERMIT CONDITION (B-1 through B-4) – 004**
   **Boilers Units 1, 2, 3 and 4**
   10 CSR 10-6.270 Acid Rain Source Permits Required
   40 CFR Parts 72, 73, and 75 through 78

**Emission Limitation:**
1. The permittee shall obtain an Acid Rain Source Permit for the combustion units (Boiler 1 B-1, Boiler 2 B-2, Boiler 3 B-3, and Boiler 4 B-4) pursuant to Title IV of the Clean Air Act.
   a) An acid rain permit OP2012-012 (Missouri Department of Natural Resources Project 2011-06-092) was issued to this facility on February 28, 2012. Attachment F contains a copy of this permit. The permit expires on December 31, 2016. The permittee shall submit a renewal application no later June 30, 2016.

**Monitoring/Recordkeeping:**
1. The permittee shall retain the most current acid rain permit issued to this installation on-site.
2. The permittee shall make the effective acid rain permit available to any Missouri Department of Natural Resources' personnel upon request.
**Reporting:**
1. Annual Compliance Certification.
2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and annual compliance certification required by Section V of this permit.

**PERMIT CONDITION (B-1 through B-4) – 005**

**Emission Limitation:**
1. The permittee shall obtain a CAIR Permit for the combustion units (Boiler 1 B-1, Boiler 2 B-2, Boiler 3 B-3, and Boiler 4 B-4) pursuant to Title IV of the Clean Air Act.
   a) This facility submitted a CAIR application to the Missouri Department of Natural Resources on July 2, 2007. Attachment H contains a copy of this permit. The permit has been incorporated into this operating permit and is, therefore, effective as long as this Part 70 operating permit is effective. The permittee shall submit a renewal CAIR application at the same time as they submit a renewal Part 70 operating permit application.

**Monitoring/Recordkeeping:**
1. The permittee shall retain the CAIR permit issued to this installation onsite.
2. The permittee shall make the CAIR permit available to any Missouri Department of Natural Resources' personnel upon request.

**Operational Limitation:**
The permittee shall combust less than 11.0 tons per day of municipal solid waste.

**Monitoring/Recordkeeping:**
1. The permittee shall maintain a log of all municipal solid waste combusted using Attachment L or an equivalent form generated by the permittee. The log shall include:
   a) Date of acceptable material burning.
   b) Type of acceptable material burned.
   c) Amount (tons) of acceptable material burned.
2. These records shall be made available for inspection to the Department of Natural Resources' personnel upon request.
3. All records shall be maintained for five years.
4. Acceptable materials are listed in Section V of this permit under Reasonably Anticipated Operating Scenarios.

**Reporting:**

1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this condition, or any malfunction, which could possibly cause an exceedance of this condition.

2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

**PERMIT CONDITION (B-1 through B-4) – 007**

**Boilers Units 1, 2, 3 and 4**

10 CSR 10-6.075 Maximum Achievable Control Technology Regulations

**Applicability:**

B-1 Boiler 1, B-2 Boiler 2, B-3 Boiler 3, and B-4 Boiler 4 meet the definition of a coal-fired EGU within §63.10042. The boilers were constructed in 1966, 1966, 1967, and 1967, respectively, classifying them as existing coal-fired EGU and affected sources per §63.9982(a)(1). The boilers combust coal with a heat content in excess of 8,300 Btu/lb meeting the requirements for the subcategory of non-low rank virgin coal in §63.9990(a)(1).

**Compliance Dates:**

1. The permittee shall comply with MACT UUUUU no later than April 16, 2015. [§63.9984(b)]

2. The permittee may apply for an extension allowing up to one additional year to comply with the standards of MACT UUUUU. [CAA §112(i)(3)(B)]

3. The permittee shall meet the notification requirements in §63.10030 according to the schedule in §63.10030 and in MACT A. Some of the notifications must be submitted before the permittee is required to comply with the emission limits and work practice standards in MACT UUUUU. [§63.9984(c)]

4. The permittee shall demonstrate that compliance has been achieved, by conducting the required performance tests and other activities, no later than 180 days after April 16, 2015. [§63.9984(f)]

**Emission Limitations and Work Practice Standards:**

1. The permittee shall meet the following requirements at all times: [§63.9991(a)]

   a) The permittee shall meet each emission limit and work practice standard in Tables 2 and 3 of MACT UUUUU that applies, except as provided under §63.10009. [§63.9991(a)(1)]

   b) The permittee shall meet each operating limit in Table 4 of MACT UUUUU that applies. [§63.9991(a)(2)]

2. As provided in §63.6(g), the Administrator may approve use of an alternative to the work practice standards in §63.9991. [§63.9991(b)]

3. The permittee may use the alternate SO\textsubscript{2} limit in Table 2 of MACT UUUUU only if the EGU: [§63.9991(c)]

   a) Has a system using wet or dry FGD technology and SO\textsubscript{2} CEMS installed on the unit; and [§63.9991(c)(1)]
b) At all times, the permittee operates the wet or dry FGD technology installed on the unit consistent with §63.10000(b). [§63.9991(c)(2)]
**Table 2 to MACT UUUUU**

[As stated in § 63.9991, the permittee shall comply with the following applicable emission limits]¹

| EGU subcategory | Pollutants (a, b, and c) | Emission Limit | Using these requirements, as appropriate (e.g., specified sampling volume or test run duration) and limitations with the test methods in Table 5 of MACT UUUUU...

<td>Coal-fired EGUs during startup</td>
<td>The permittee shall operate all CMS during startup. Startup means either the first-ever firing of fuel in a boiler for the purpose of producing electricity, or the firing of fuel in a boiler after a shutdown event for any purpose. Startup ends when any of the steam from the boiler is used to generate electricity for sale over the grid or for any other purpose (including on site use). For startup of a unit, the permittee shall use clean fuels, either natural gas or distillate oil or a combination of clean fuels for ignition. Once the permittee converts to firing coal, the permittee shall engage all of the applicable control technologies except dry scrubber and SCR. The permittee shall start the dry scrubber and SCR systems, if present, appropriately to comply with relevant standards applicable during normal operation. The permittee shall comply with all applicable emissions limits at all times except for periods that meet the definitions of startup and shutdown in MACT UUUUU. The permittee shall retain records during periods of startup. The permittee shall provide reports concerning activities and periods of startup, as specified in §63.10011(g) and §63.10021(h) and (i).</td>
</tr>
<tr>
<td>Coal-fired EGUs during shutdown</td>
<td>The permittee shall operate all CMS during shutdown. Shutdown means the cessation of operation of a boiler for any purpose. Shutdown begins either when none of the steam from the boiler is used to generate electricity for sale over the grid or for any other purpose (including on-site use) or at the point of no fuel being fired in the boiler. Shutdown ends when there is both no electricity being generated and no fuel being fired in the boiler. During shutdown, the permittee shall operate all applicable control technologies while firing coal. The permittee shall comply with all applicable emissions limits at all times except for periods that meet the definitions of startup and shutdown in MACT UUUUU. The permittee shall retain records during periods of startup. The permittee shall provide reports concerning activities and periods of startup, as specified in §63.10011(g) and §63.10021(h) and (i).</td>

</tbody>
</table>

**General Requirements:**

1. The permittee shall be in compliance with the emission limits and operating limits in MACT UUUUU. These limits apply at all times except during periods of startup and shutdown; however, for coal-fired EGUs, the permittee is required to meet the work practice requirements in Table 3 of MACT UUUUU during periods of startup or shutdown. [§63.10000(a)]

2. At all times the permittee shall operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. Determination of whether such operation and maintenance procedures are being used will be based on information available to the EPA Administrator which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source. [§63.10000(b)]
3. Initial performance testing is required for all pollutants, to demonstrate compliance with the applicable emission limits. [%63.10000(c)(1)]
   a) The permittee may conduct the initial performance testing in accordance with §63.10005(h), to determine whether the unit qualifies as a low emitting EGU (LEE) for one or more applicable emissions limits, with the following exception: [%63.10000(c)(1)(i)]
      i) The permittee may not pursue the LEE option if the coal-fired EGU is equipped with an acid gas scrubber and has a main stack and bypass stack exhaust configuration, and [%63.10000(c)(1)(i)(A)]
   b) For a qualifying LEE for Hg emissions limits, the permittee shall conduct a 30-day performance test using Method 30B at least once every 12 calendar months to demonstrate continued LEE status. [%63.10000(c)(1)(ii)]
   c) For a qualifying LEE of any other applicable emissions limits, the permittee shall conduct a performance test at least once every 36 calendar months to demonstrate continued LEE status. [%63.10000(c)(1)(iii)]
   d) If the coal-fired EGU does not qualify as a LEE for total non-Hg HAP metals, individual non-Hg HAP metals, or filterable PM, the permittee shall demonstrate compliance through an initial performance test and the permittee shall monitor continuous performance through either use of a PM continuous parametric monitoring system (PM CPMS), a PM CEMS, or compliance performance testing repeated quarterly. [%63.10000(c)(1)(iv)]
      i) If the permittee elects to use PM CPMS, the permittee will establish a site-specific operating limit corresponding to the results of the performance test demonstrating compliance with the pollutant with which the permittee chooses to comply: total non-Hg HAP metals, individual non-Hg HAP metals or filterable PM. The permittee will use the PM CPMS to demonstrate continuous compliance with this operating limit. If the permittee elects to use a PM CPMS, the permittee shall repeat the performance test annually for the selected pollutant limit and reassess and adjust the site-specific operating limit in accordance with the results of the performance test. [%63.10000(c)(1)(iv)(A)]
      ii) The permittee may also opt to install and operate a PM CEMS certified in accordance with Performance Specification 11 and Procedure 2 of NSPS Appendices B and F, respectively, in accordance with §63.10010(i). [%63.10000(c)(1)(iv)(B)]
   e) If the coal-fired EGU does not qualify as a LEE for HCl, the permittee may demonstrate initial and continuous compliance through use of an HCl CEMS, installed and operated in accordance with MACT UUUUU Appendix B. As an alternative to HCl CEMS, the permittee may demonstrate initial and continuous compliance by conducting an initial and periodic quarterly performance stack test for HCl. If the EGU uses wet or dry FGD technology (this includes limestone injection into a fluidized bed combustion unit), the permittee may apply a second alternative to HCl CEMS by installing and operating a SO₂ CEMS in accordance with 40 CFR Part 75 to demonstrate compliance with the applicable SO₂ emissions limit. [%63.10000(c)(1)(v)]
   f) If the coal-fired EGU does not qualify as a LEE for Hg, the permittee shall demonstrate initial and continuous compliance through use of a Hg CEMS or a sorbent trap monitoring system, in accordance with MACT UUUUU Appendix A. [%63.10000(c)(1)(vi)]
4. If the permittee demonstrates compliance with any applicable emissions limit through use of a continuous monitoring system (CMS), where a CMS includes a CPMS as well as a CEMS, the permittee shall develop a site-specific monitoring plan and submit this site-specific monitoring plan, if requested, at least 60 days before the initial performance evaluation (where applicable) of the CMS. This requirement also applies if the permittee petitions the Administrator for alternative monitoring parameters under §63.8(f). This requirement to develop and submit a site-specific
monitoring plan does not apply to affected sources with existing monitoring plans that apply to CEMS and CPMS prepared under Appendix B to 40 CFR Part 60 or 75, and that meet the requirements of §63.10010. Using the process described in §63.8(f)(4), the permittee may request approval of monitoring system quality assurance and quality control procedures alternative to those specified and, if approved, include those in the site-specific monitoring plan. The monitoring plan shall address all of the following provisions: [§63.10000(d)(1)]

- a) The site-specific monitoring plan shall include the information specified in §63.10000(d)(5)(i) through (vii). Alternatively, the requirements of §63.10000(d)(5)(i) through (vii) are considered to be met for a particular CMS or sorbent trap monitoring system if: [§63.10000(d)(2)]
  - i) The CMS or sorbent trap monitoring system is installed, certified, maintained, operated, and quality-assured either according to 40 CFR Part 75, or MACT UUUUU Appendix A or B; and [§63.10000(d)(2)(i)]
  - ii) The recordkeeping and reporting requirements of 40 CFR Part 75, or MACT UUUUU Appendix A or B, that pertain to the CMS are met. [§63.10000(d)(2)(ii)]

- b) If requested by the Administrator, the permittee shall submit the monitoring plan (or relevant portion of the plan) at least 60 days before the initial performance evaluation of a particular CMS, except where the CMS has already undergone a performance evaluation that meets the requirements of §63.10010 (e.g., if the CMS was previously certified under another program). [§63.10000(d)(3)]

- c) The permittee shall operate and maintain the CMS according to the site-specific monitoring plan. [§63.10000(d)(4)]

- d) The provisions of the site-specific monitoring plan shall address the following items: [§63.10000(d)(5)]
  - i) Installation of the CEMS or sorbent trap monitoring system sampling probe or other interface at a measurement location relative to each affected process unit such that the measurement is representative of control of the exhaust emissions (e.g., on or downstream of the last control device). See §63.10010(a) for further details. For PM CPMS installations, follow the procedures in §63.10010(h). [§63.10000(d)(5)(i)]
  - ii) Performance and equipment specifications for the sample interface, the pollutant concentration or parametric signal analyzer, and the data collection and reduction systems. [§63.10000(d)(5)(ii)]
  - iii) Schedule for conducting initial and periodic performance evaluations. [§63.10000(d)(5)(iii)]
  - iv) Performance evaluation procedures and acceptance criteria (e.g., calibrations), including the quality control program in accordance with the general requirements of §63.8(d). [§63.10000(d)(5)(iv)]
  - v) On-going operation and maintenance procedures, in accordance with the general requirements of §63.8(c)(1)(ii), (3), and (4)(ii). [§63.10000(d)(5)(v)]
  - vi) Conditions that define a CMS that is out of control consistent with §63.8(c)(7)(i) and for responding to out of control periods consistent with §63.8(c)(7)(ii) and (8). [§63.10000(d)(5)(vi)]
  - vii) On-going recordkeeping and reporting procedures, in accordance with the general requirements of §63.10(e), (e)(1), and (e)(2)(i), or as specifically required by MACT UUUUU. [§63.10000(d)(5)(vii)]

5. As part of the demonstration of continuous compliance, the permittee shall perform periodic tune-ups of the EGU(s), according to §63.10021(e). [§63.10000(e)]

6. The permittee is subject to the requirements of MACT UUUUU for at least six months following the last date the emission unit met the definition of an EGU subject to MACT UUUUU (e.g., six months
after a cogeneration unit provided more than one third of its potential electrical output capacity and more than 25 MW electrical output to any power distribution system for sale). The permittee may opt to remain subject to the provisions of MACT UUUUU beyond six months after the last date the emission unit met the definition of an EGU subject to MACT UUUUU. [§63.10000(f)]

7. If the emission unit no longer meets the definition of an EGU subject to MACT UUUUU the permittee shall be in compliance with any newly applicable standards on the date the permittee is no longer subject. The date the permittee is no longer subject to MACT UUUUU is a date selected by the permittee, that shall be at least six months from the date that the emission unit last met the definition of an EGU subject to MACT UUUUU. The permittee shall remain in compliance with MACT UUUUU until the date the permittee selects to cease complying. [§63.10000(g)]

8. If it has been at least six months since the emission unit was operated in a manner that caused the emission unit to meet the definition of an EGU subject to MACT UUUUU, the permittee may, consistent with §63.10000(g), select the date on which the EGU will no longer be subject to MACT UUUUU. The permittee shall be in compliance with any newly applicable §112 or §129 standards on the date the permittee selected. [§63.10000(i)(1)]

9. The permittee shall provide 30 days prior notice of the date the EGU will cease complying with MACT UUUUU. The notification shall identify: [§63.10000(i)(2)]
   a) The name of the owner or operator of the EGU(s), the location of the facility, the EGU(s) that will cease complying with MACT UUUUU, and the date of the notice; [§63.10000(i)(2)(i)]
   b) The currently applicable subcategory under MACT UUUUU, and any 40 CFR Part 60, 62, or 63 subpart and subcategory that will be applicable after the permittee ceases complying with MACT UUUUU; [§63.10000(i)(2)(ii)]
   c) The date on which the permittee became subject to MACT UUUUU; [§63.10000(i)(2)(iii)]
   d) The date upon which the permittee will cease complying with MACT UUUUU, consistent with §63.10000(g). [§63.10000(i)(2)(iv)]

10. All air pollution control equipment necessary for compliance with any newly applicable emissions limits which apply as a result of the cessation or commencement or recommencement of operations that cause the EGU to meet the definition of an EGU subject to MACT UUUUU shall be installed and operational as of the date the source ceases to be or becomes subject to MACT UUUUU. [§63.10000(j)]

11. All monitoring systems necessary for compliance with any newly applicable monitoring requirements which apply as a result of the cessation or commencement or recommencement of operations that cause the EGU to meet the definition of an EGU subject to MACT UUUUU shall be installed and operational as of the date the source ceases to be or becomes subject to MACT UUUUU. All calibration and drift checks shall be performed as of the date the source ceases to be or becomes subject to MACT UUUUU. The permittee shall also comply with the provisions of §§63.10010, 63.10020, and 63.10021. Relative accuracy tests shall be performed as of the performance test deadline for PM CEMS, if applicable. Relative accuracy testing for other CEMS need not be repeated if that testing was previously performed consistent with CAA §112 monitoring requirements or monitoring requirements under MACT UUUUU. [§63.10000(k)]

**Affirmative Defense:**
The permittee shall refer to §63.10001 for information regarding asserting an affirmative defense under MACT UUUUU.
**Initial Compliance:**

1. **General requirements.** For each EGU, the permittee shall demonstrate initial compliance with each applicable emissions limit in Table 2 of MACT UUUUU through performance testing. Where two emissions limits are specified for a particular pollutant (e.g., a heat input-based limit in lb/MmBtu and an electrical output-based limit in lb/MWh), the permittee may demonstrate compliance with either emission limit. For a particular compliance demonstration, the permittee may be required to conduct one or more of the following activities in conjunction with performance testing: collection of hourly electrical load data (MW); establishment of operating limits according to §63.10011 and Tables 4 and 7 of MACT UUUUU; and CMS performance evaluations. In all cases, the permittee shall demonstrate initial compliance no later than the applicable date in §63.10005(f) for tune-up work practices for existing EGUs and in §63.9984 for other requirements for existing EGUs. [§63.10005(a)]

   a) To demonstrate initial compliance with an applicable emissions limit in Table 2 of MACT UUUUU using stack testing, the initial performance test generally consists of three runs at specified process operating conditions using approved methods. If the permittee is required to establish operating limits (see §63.10005(d) and Table 4 of MACT UUUUU), the permittee shall collect all applicable parametric data during the performance test period. Also, if the permittee chooses to comply with an electrical output-based emission limit, the permittee shall collect hourly electrical load data during the test period. [§63.10005(a)(1)]

   b) To demonstrate initial compliance using either a CMS that measures HAP concentrations directly (i.e., an Hg or HCl CEMS, or a sorbent trap monitoring system) or an SO₂ or PM CEMS, the initial performance test consists of 30 boiler operating days of data collected by the initial compliance demonstration date specified in §63.10005 with the certified monitoring system. [§63.10005(a)(2)]

      i) The 30-boiler operating day CMS performance test shall demonstrate compliance with the applicable Hg, HCl, PM, or SO₂ emissions limit in Table 2 of MACT UUUUU. [§63.10005(a)(2)(i)]

      ii) If the permittee chooses to comply with an electrical output-based emission limit, the permittee shall collect hourly electrical load data during the performance test period. [§63.10005(a)(2)(ii)]

2. **Performance testing requirements.** If the permittee chooses to use performance testing to demonstrate initial compliance with the applicable emissions limits in Table 2 of MACT UUUUU for the EGU, the permittee shall conduct the tests according to §63.10007 and Table 5 of MACT UUUUU. For the purposes of the initial compliance demonstration, the permittee may use test data and results from a performance test conducted prior to the date on which compliance is required as specified in §63.9984, provided that the following conditions are fully met: [§63.10005(b)]

   a) For a performance test based on stack test data, the test was conducted no more than 12 calendar months prior to the date on which compliance is required as specified in §63.9984; [§63.10005(b)(1)]

   b) For a performance test based on data from a certified CEMS or sorbent trap monitoring system, the test consists of all valid CMS data recorded in the 30 boiler operating days immediately preceding that date; [§63.10005(b)(2)]

   c) The performance test was conducted in accordance with all applicable requirements in §63.10007 and Table 5 to MACT UUUUU; [§63.10005(b)(3)]

   d) A record of all parameters needed to convert pollutant concentrations to units of the emission standard (e.g., stack flow rate, diluent gas concentrations, hourly electrical loads) is available for the entire performance test period; and [§63.10005(b)(4)]
e) For each performance test based on stack test data, the permittee certifies, and retains documentation demonstrating, that the EGU configuration, control devices, and fuel(s) have remained consistent with conditions since the prior performance test was conducted. \([\text{§63.10005(b)(5)}]\)

3. CMS requirements. If, for a particular emission or operating limit, the permittee is required to (or elects to) demonstrate initial compliance using a continuous monitoring system, the CMS shall pass a performance evaluation prior to the initial compliance demonstration. If a CMS has been previously certified under another state or federal program and is continuing to meet the on-going quality-assurance (QA) requirements of that program, then, provided that the certification and QA provisions of that program meet the applicable requirements of §63.10010(b) through (h), an additional performance evaluation of the CMS is not required under MACT UUUUU. \([\text{§63.10005(d)}]\)

a) The permittee may demonstrate initial compliance with the applicable SO\(_2\) or HCl emissions limit in Table 2 of MACT UUUUU through use of an SO\(_2\) or HCl CEMS installed and operated in accordance with 40 CFR Part 75 or MACT UUUUU Appendix B, as applicable. The permittee may also demonstrate compliance with a filterable PM emission limit in Table 2 of MACT UUUUU through use of a PM CEMS installed, certified, and operated in accordance with §63.10010(i). Initial compliance is achieved if the arithmetic average of 30-boiler operating days of quality-assured CEMS data, expressed in units of the standard (see §63.10007(e)), meets the applicable SO\(_2\), PM, or HCl emissions limit in Table 2 to MACT UUUUU. Use NSPS Appendix A-7 Method 19 Equation 19–19 to calculate the 30-boiler operating day average emissions rate. (Note: for this calculation, the term \(E_{ij}\) in Equation 19–19 shall be in the same units of measure as the applicable HCl emission limit in Table 2 to MACT UUUUU). \([\text{§63.10005(d)(1)}]\)

b) For affected coal-fired EGUs that demonstrate compliance with the applicable emission limits for total non-Hg HAP metals, individual non-Hg HAP metals, total HAP metals, individual HAP metals, or filterable PM listed in Table 2 to MACT UUUUU using initial performance testing and continuous monitoring with PM CPMS: \([\text{§63.10005(d)(2)}]\)

i) The permittee shall demonstrate initial compliance no later than the applicable date specified in §63.9984(f) for existing EGUs. \([\text{§63.10005(d)(2)(i)}]\)

ii) The permittee shall demonstrate continuous compliance with the PM CPMS site-specific operating limit that corresponds to the results of the performance test demonstrating compliance with the pollutant emission limits with which the permittee chooses to comply. \([\text{§63.10005(d)(2)(ii)}]\)

iii) The permittee shall repeat the performance test annually for the selected pollutant emissions limit and reassess and adjust the site-specific operating limit in accordance with the results of the performance test. \([\text{§63.10005(d)(2)(iii)}]\)

c) For affected EGUs that are either required to or elect to demonstrate initial compliance with the applicable Hg emission limit in Table 2 of MACT UUUUU using Hg CEMS or sorbent trap monitoring systems, initial compliance shall be demonstrated no later than the applicable date specified in §63.9984(f) for existing EGUs. Initial compliance is achieved if the arithmetic average of 30-boiler operating days of quality-assured CEMS (or sorbent trap monitoring system) data, expressed in units of the standard (see §6.2 of MACT UUUUU Appendix A), meets the applicable Hg emission limit in Table 2 to MACT UUUUU. \([\text{§63.10005(d)(3)}]\)

4. Tune-ups. All affected EGUs are subject to the work practice standards in Table 3 of MACT UUUUU. As part of the initial compliance demonstration, the permittee shall conduct a performance tune-up of the EGU according to §63.10021(e). \([\text{§63.10005(e)}]\)
5. For existing affected sources a tune-up may occur prior to April 16, 2012, so that existing sources without neural networks have up to 42 calendar months (three years from promulgation plus 180 days) or, in the case of units employing neural network combustion controls, up to 54 calendar months (48 months from promulgation plus 180 days) after the date that is specified for the source in §63.9984 and according to the applicable provisions in §63.7(a)(2) as cited in Table 9 to MACT UUUUU to demonstrate compliance with this requirement. If a tune-up occurs prior to such date, the source shall maintain adequate records to show that the tune-up met the requirements of this standard. [§63.10005(f)]

6. LEE. The provisions of §63.10005(h) apply to all pollutants with emissions limits from existing EGUs. The permittee may not pursue this compliance option if the existing EGU is equipped with an acid gas scrubber and has a main stack and bypass stack exhaust configuration. [§63.10005(h)]

   a) An EGU may qualify for LEE status for Hg, HCl, filterable PM, total non-Hg HAP metals, or individual non-Hg HAP metals if the permittee collects performance test data that meet the requirements of §63.10005(h), and if those data demonstrate: [§63.10005(h)(1)]
   i) For all pollutants except Hg, performance test emissions results less than 50 percent of the applicable emissions limits in Table 2 to MACT UUUUU for all required testing for three consecutive years; or [§63.10005(h)(1)(i)]
   ii) For Hg emissions from an existing EGU, either: [§63.10005(h)(1)(ii)]
      (1) Average emissions less than ten percent of the applicable Hg emissions limit in Table 2 to MACT UUUUU (expressed either in units of lb/TBtu or lb/GWh); or [§63.10005(h)(1)(ii)(A)]
      (2) Potential Hg mass emissions of 29.0 or fewer pounds per year and compliance with the applicable Hg emission limit in Table 2 to MACT UUUUU (expressed either in units of lb/TBtu or lb/GWh). [§63.10005(h)(1)(ii)(B)]

   b) For all pollutants except Hg, the permittee shall conduct all required performance tests described in §63.10007 to demonstrate that a unit qualifies for LEE status. [§63.10005(h)(2)]
   i) When conducting emissions testing to demonstrate LEE status, the permittee shall increase the minimum sample volume specified in Table 2 to MACT UUUUU nominally by a factor of two. [§63.10005(h)(2)(i)]
   ii) Follow the instructions in §63.10007(e) and Table 5 to MACT UUUUU to convert the test data to the units of the applicable standard. [§63.10005(h)(2)(ii)]

   c) For Hg, the permittee shall conduct a 30-boiler operating day performance test using Method 30B in NSPS Appendix A–8 to determine whether a unit qualifies for LEE status. Locate the Method 30B sampling probe tip at a point within the ten percent centroidal area of the duct at a location that meets Method 1 in NSPS Appendix A–1 and conduct at least three nominally equal length test runs over the 30-boiler operating day test period. Collect Hg emissions data continuously over the entire test period (except when changing sorbent traps or performing required reference method QA procedures), under all process operating conditions. The permittee may use a pair of sorbent traps to sample the stack gas for no more than ten days. [§63.10005(h)(3)]
   i) Depending on whether the permittee intends to assess LEE status for Hg in terms of the lb/TBtu or lb/GWh emission limit in Table 2 to MACT UUUUU or in terms of the annual Hg mass emissions limit of 29.0 lb/year, the permittee shall collect some or all of the following data during the 30-boiler operating day test period (see §63.10005(h)(3)(iii)): [§63.10005(h)(3)(i)]
(1) Diluent gas (CO₂ or O₂) data, using either Method 3A in NSPS Appendix A–3 or a
diluent gas monitor that has been certified according to 40 CFR Part 75.
[§63.10005(h)(3)(i)(A)]

(2) Stack gas flow rate data, using either Method 2, 2F, or 2G in NSPS Appendices A–1 and
A–2, or a flow rate monitor that has been certified according to 40 CFR Part 75.
[§63.10005(h)(3)(i)(B)]

(3) Stack gas moisture content data, using either Method 4 in NSPS Appendix A–1, or a
moisture monitoring system that has been certified according to 40 CFR Part 75.
Alternatively, an appropriate fuel-specific default moisture value from §75.11(b) may be
used in the calculations. [§63.10005(h)(3)(i)(C)]

(4) Hourly electrical load data (MW), from facility records. [§63.10005(h)(3)(i)(D)]

ii) If the permittee uses CEMS to measure CO₂ (or O₂) concentration, and/or flow rate, and/or
moisture, record hourly average values of each parameter throughout the 30-boiler operating
day test period. If the permittee opts to use EPA reference methods rather than CEMS for
any parameter, the permittee shall perform at least one representative test run on each
operating day of the test period, using the applicable reference method. [§63.10005(h)(3)(ii)]

iii) Calculate the average Hg concentration, in µg/m³ (dry basis), for the 30-boiler operating day
performance test, as the arithmetic average of all Method 30B sorbent trap results. Also
calculate, as applicable, the average values of CO₂ or O₂ concentration, stack gas flow rate,
stack gas moisture content, and electrical load for the test period. Then:
[§63.10005(h)(3)(iii)]

(1) To express the test results in units of lb/TBtu, follow the procedures in §63.10007(e). Use
the average Hg concentration and diluent gas values in the calculations.
[§63.10005(h)(3)(iii)(A)]

(2) To express the test results in units of lb/GWh, use Equations A–3 and A–4 in §6.2.2 of
MACT UUUUU Appendix A, replacing the hourly values “Ch”, “Qh”, “Bws” and
“(MW)h” with the average values of these parameters from the performance test.
[§63.10005(h)(3)(iii)(B)]

(3) To calculate pounds of Hg per year, use one of the following methods:
[§63.10005(h)(3)(iii)(C)]

(a) Multiply the average lb/TBtu Hg emission rate (determined according to
§63.10005(h)(3)(iii)(A)) by the maximum potential annual heat input to the unit
(TBtu), which is equal to the maximum rated heat input (TBtu/hr) times 8,760
hours. If the maximum rated heat input value is expressed in units of MmBtu/hr,
multiply it by 10⁶ to convert it to TBtu/hr; or [§63.10005(h)(3)(iii)(C)(1)]

(b) Multiply the average lb/GWh Hg emission rate (determined according to
§63.10005(h)(3)(iii)(B)) by the maximum potential annual electricity generation
(GWh), which is equal to the maximum rated electrical output of the unit (GW) times
8,760 hours. If the maximum rated electrical output value is expressed in units of
MW, multiply it by 10⁻³ to convert it to GW; or [§63.10005(h)(3)(iii)(C)(2)]

7. Startup and shutdown for coal-fired units. The permittee shall follow the requirements given in
Table 3 to MACT UUUUU. [§63.10005(j)]

8. The permittee shall submit a Notification of Compliance Status summarizing the results of the initial
compliance demonstration, as provided in §63.10030. [§63.10005(k)]
Table 5 to MACT UUUUU – Performance Testing Requirements for Filterable PM and SO₂

**Subsequent Performance Tests and Tune-ups:**
The permittee shall refer to §63.10006 for requirements for subsequent performance tests and tune-ups under MACT UUUUU.

**Test Methods and Procedures:**
The permittee shall refer to §63.10007 for test methods and procedures under MACT UUUUU.

**Emissions Averaging:**
1. **General eligibility.** [§63.10009(a)]
   a) The permittee may use emissions averaging as described in §63.10009(a)(2) as an alternative to meeting the requirements of §63.9991 for filterable PM, SO₂, HCl, non-Hg HAP metals, or Hg on an EGU-specific basis if: [§63.10009(a)(1)]
   i) The permittee has more than one existing EGU in the same subcategory located at one or more contiguous properties, belonging to a single major industrial grouping, which are under common control of the same person (or persons under common control); and [§63.10009(a)(1)(i)]
   ii) The permittee uses CEMS (or sorbent trap monitoring systems for determining Hg emissions) or quarterly emissions testing for demonstrating compliance. [§63.10009(a)(1)(ii)]
   b) The permittee may demonstrate compliance by emissions averaging among the existing EGUs in the same subcategory, if the averaged Hg emissions for the EGUs are equal to or less than 1.0 lb/TBtu or 0.011 lb/GWh, according to the procedures in §63.10009. The averaging time for emissions averaging for Hg from the EGUs is 90 days (rolling daily) using data from CEMS, sorbent trap monitoring, or a combination of monitoring data and data from manual performance testing. For the purposes of §63.10009(a)(2), 90-day group boiler operating days is defined as a period during which at least one unit in the emissions averaging group has operated 90 days. The permittee shall calculate the weighted average emissions rate for the group in accordance with the procedures in §63.10009(a)(2) using the data from all units in the group including any that operate fewer than 90 days during the preceding 90 group boiler days. [§63.10009(a)(2)]
i) The permittee may choose to have the EGU emissions averaging group meet either the heat input basis (MmBtu or TBtu, as appropriate for the pollutant) or gross electrical output basis (MWh or GWh, as appropriate for the pollutant). [§63.10009(a)(2)(i)]

ii) The permittee may not mix bases within the EGU emissions averaging group. [§63.10009(a)(2)(ii)]

2. Equations. Use the following equations when performing calculations for the EGU emissions averaging group: [§63.10009(b)]

a) Group eligibility equations.

\[
WAER_m = \frac{\sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (Herm_i \times Rmm_i) \right]_p + \sum_{i=1}^{m} (Ter_i \times Rmt_i)}{\left[ \sum_{i=1}^{p} \sum_{i=1}^{n} Rmm_i \right]_p + \sum_{i=1}^{m} Rmt_i}
\]

Equation 1a

Where:

\(WAER_m\) = Weighted average emissions rate maximum in terms of lb/heat input or lb/gross electrical output,  
\(Herm_i\) = Hourly emissions rate (e.g., lb/MmBtu, lb/MWh) from CEMS or sorbent trap monitoring for hour \(i\),  
\(Rmm_i\) = Maximum rated heat input or gross electrical output of unit \(i\) in terms of heat input or gross electrical output,  
\(p\) = number of EGUs in emissions averaging group that rely on CEMS,  
\(n\) = number of hourly rates collected over 30-group boiler operating days,  
\(Ter_i\) = Emissions rate from most recent test of unit \(i\) in terms of lb/heat input or lb/gross electrical output,  
\(Rmt_i\) = Maximum rated heat input or gross electrical output of unit \(i\) in terms of lb/heat input or lb/gross electrical output, and  
\(m\) = number of EGUs in emissions averaging group that rely on emissions testing.

\[
WAER_m = \frac{\sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (Herm_i \times Smm_i \times Cfm_i) \right]_p + \sum_{i=1}^{m} (Ter_i \times Smt_i \times Cft_i)}{\left[ \sum_{i=1}^{p} \sum_{i=1}^{n} Smm_i \times Cfm_i \right]_p + \sum_{i=1}^{m} Smt_i \times Cft_i}
\]

Equation 1b

Where:

variables with similar names share the descriptions for Equation 1a,  
\(Smm_i\) = maximum steam generation in units of pounds from unit \(i\) that uses CEMS or sorbent trap monitoring,  
\(Cfm_i\) = conversion factor, calculated from the most recent emissions test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit \(i\) that uses CEMS or sorbent trap monitoring,  
\(Smt_i\) = maximum steam generation in units of pounds from unit \(i\) that uses emissions testing, and  
\(Cft_i\) = conversion factor, calculated from the most recent emissions test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit \(i\) that uses emissions testing. [§63.10009(b)(1)]
b) Weighted 30-day rolling average emissions rate equations for pollutants other than Hg. Use Equation 2a or 2b to calculate the 30-day rolling average emissions daily.

$$\text{WAER} = \frac{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Her}_i \times \text{Rm}_i) \right] \right] + \sum_{i=1}^{m} (\text{Ter}_i \times \text{Rt}_i)}{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Rm}_i) \right] \right] + \sum_{i=1}^{m} \text{Rt}_i}$$

Equation 2a

Where:

- Her$_i$ = hourly emission rate (e.g., lb/MmBtu, lb/MWh) from unit i's CEMS for the preceding 30-group boiler operating days,
- Rm$_i$ = hourly heat input or gross electrical output from unit i for the preceding 30-group boiler operating days,
- p = number of EGUs in emissions averaging group that rely on CEMS or sorbent trap monitoring,
- n = number of hourly rates collected over 30-group boiler operating days,
- Ter$_i$ = Emissions rate from most recent emissions test of unit i in terms of lb/heat input or lb/gross electrical output,
- Rt$_i$ = Maximum rated heat input or gross electrical output of unit i in terms of lb/heat input or lb/gross electrical output, and
- m = number of EGUs in emissions averaging group that rely on emissions testing.

$$\text{WAER} = \frac{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Her}_i \times \text{Sm}_i \times \text{Cfm}_i) \right] \right] + \sum_{i=1}^{m} (\text{Ter}_i \times \text{St}_i \times \text{Cft}_i)}{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} \text{Sm}_i \times \text{Cfm}_i \right] \right] + \sum_{i=1}^{m} \text{St}_i \times \text{Cft}_i}$$

Equation 2b

Where:

- variables with similar names share the descriptions for Equation 2a,
- Sm$_i$ = steam generation in units of pounds from unit i that uses CEMS for the preceding 30-group boiler operating days,
- Cfm$_i$ = conversion factor, calculated from the most recent compliance test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit i that uses CEMS from the preceding 30-group boiler operating days,
- St$_i$ = steam generation in units of pounds from unit i that uses emissions testing, and
- Cft$_i$ = conversion factor, calculated from the most recent compliance test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit i that uses emissions testing. [§63.10009(b)(2)]

c) Weighted 90-boiler operating day rolling average emissions rate equations for Hg emissions. Use Equation 3a or 3b to calculate the 90-day rolling average emissions daily.

$$\text{WAER} = \frac{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Her}_i \times \text{Rm}_i) \right] \right] + \sum_{i=1}^{m} (\text{Ter}_i \times \text{Rt}_i)}{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Rm}_i) \right] \right] + \sum_{i=1}^{m} \text{Rt}_i}$$

Equation 3a

$$\text{WAER} = \frac{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (\text{Her}_i \times \text{Sm}_i \times \text{Cfm}_i) \right] \right] + \sum_{i=1}^{m} (\text{Ter}_i \times \text{St}_i \times \text{Cft}_i)}{\left[ \sum_{i=1}^{p} \left[ \sum_{i=1}^{n} \text{Sm}_i \times \text{Cfm}_i \right] \right] + \sum_{i=1}^{m} \text{St}_i \times \text{Cft}_i}$$

Equation 3b
Where:
Her = hourly emission rate from unit i's CEMS or Hg sorbent trap monitoring for the preceding 90-group boiler operating days,
Rmi = hourly heat input or gross electrical output from unit i for the preceding 90-group boiler operating days,
\( p = \) number of EGUs in emissions averaging group that rely on CEMS,
\( n = \) number of hourly rates collected over the 90-group boiler operating days,
Teri = Emissions rate from most recent emissions test of unit i in terms of lb/heat input or lb/gross electrical output,
Rti = Maximum rated heat input or gross electrical output of unit i in terms of lb/heat input or lb/gross electrical output, and
\( m = \) number of EGUs in emissions averaging group that rely on emissions testing.

\[
WAER = \frac{\sum_{i=1}^{p} \left[ \sum_{i=1}^{n} (Her_i \times Sm_i \times Cfmi_i) \right]}{\sum_{i=1}^{n} (Sm_i \times Cfmi_i)} + \frac{\sum_{i=1}^{m} (Teri_i \times St_i \times Cfti_i)}{\sum_{i=1}^{m} St_i \times Cfti_i}
\]  
Equation 3b

Where:
variables with similar names share the descriptions for Equation 2a,
Sm = steam generation in units of pounds from unit i that uses CEMS or a Hg sorbent trap monitoring for the preceding 90-group boiler operating days,
Cfmi = conversion factor, calculated from the most recent compliance test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit i that uses CEMS or sorbent trap monitoring from the preceding 90-group boiler operating days,
Sti = steam generation in units of pounds from unit i that uses emissions testing, and
Cfti = conversion factor, calculated from the most recent emissions test results, in units of heat input per pound of steam generated or gross electrical output per pound of steam generated, from unit i that uses emissions testing. [§63.10009(b)(3)]

2. **Separate stack requirements.** For a group of two or more existing EGUs in the same subcategory that each vent to a separate stack, the permittee may average filterable PM, SO\(_2\), HCl, non-Hg HAP metals, or Hg emissions to demonstrate compliance with the limits in Table 2 to MACT UUUUUU if the permittee satisfies the requirements in §63.10009(d) through (j). [§63.10009(c)]

3. For each existing EGU in the averaging group: [§63.10009(d)]
   a) The emissions rate achieved during the initial performance test for the HAP being averaged shall not exceed the emissions level that was being achieved 180 days after April 16, 2015, or the date on which emissions testing done to support the emissions averaging plan is complete (if the Administrator does not require submission and approval of the emissions averaging plan), or the date that the permittee begins emissions averaging, whichever is earlier; or [§63.10009(d)(1)]
   b) The control technology employed during the initial performance test shall not be less than the design efficiency of the emissions control technology employed 180 days after April 16, 2015 or the date that the permittee begins emissions averaging, whichever is earlier. [§63.10009(d)(2)]

4. The weighted-average emissions rate from the existing EGUs participating in the emissions averaging option shall be in compliance with the limits in Table 2 to MACT UUUUUU at all times following the compliance date specified 180 days after April 16, 2015, or the date on which the permittee completes the emissions measurements used to support the emissions averaging plan (if
5. **Emissions averaging group eligibility demonstration.** The permittee shall demonstrate the ability for the EGUs included in the emissions averaging group to demonstrate initial compliance according to §63.10009(f)(1) or (2) using the maximum normal operating load of each EGU and the results of the initial performance tests. For this demonstration and prior to submitting the emissions averaging plan, if requested, the permittee shall conduct required emissions monitoring for 30 days of boiler operation and any required manual performance testing to calculate an initial weighted average emissions rate in accordance with §63.10009. Should the Administrator require approval, the permittee shall submit the proposed emissions averaging plan and supporting data at least 120 days before April 16, 2015. If the Administrator requires approval of the plan, the permittee may not begin using emissions averaging until the Administrator approves the plan. [§63.10009(f)]

   a) The permittee shall use Equation 1a in §63.10009(b) to demonstrate that the maximum weighted average emissions rates of filterable PM, SO$_2$, HCl, non-Hg HAP metals, or Hg emissions from the existing units participating in the emissions averaging option do not exceed the emissions limits in Table 2 to MACT UUUU. [§63.10009(f)(1)]

   b) If the permittee is not capable of monitoring heat input or gross electrical output, and the EGU generates steam for purposes other than generating electricity, the permittee may use Equation 1b §63.10009 as an alternative to using Equation 1a of §63.10009 to demonstrate that the maximum weighted average emissions rates of filterable PM, SO$_2$, HCl, non-Hg HAP metals, or Hg emissions from the existing units participating in the emissions averaging group do not exceed the emission limits in Table 2 to MACT UUUU. [§63.10009(f)(2)]

6. **The permittee shall determine the weighted average emissions rate in units of the applicable emissions limit on a 30 day rolling average (90 day rolling average for Hg) basis according to §63.10009(g)(1) and (2). The first averaging period begins on 30 (or 90 for Hg) days after February 16, 2015 or the date that the permittee begins emissions averaging, whichever is earlier.** [§63.10009(g)]

   a) The permittee shall use Equation 2a or 3a of §63.10009(b) to calculate the weighted average emissions rate using the actual heat input or gross electrical output for each existing unit participating in the emissions averaging option. [§63.10009(g)(1)]

   b) If the permittee is not capable of monitoring heat input or gross electrical output, the permittee may use Equation 2b or 3b of §63.10009(b) as an alternative to using Equation 2a of §63.10009(b) to calculate the average weighted emission rate using the actual steam generation from the units participating in the emissions averaging option. [§63.10009(g)(2)]

7. **CEMS (or sorbent trap monitoring) use.** If an EGU in the emissions averaging group uses CEMS (or a sorbent trap monitor for Hg emissions) to demonstrate compliance, the permittee shall use those data to determine the 30 (or 90) group boiler operating day rolling average emissions rate. [§63.10009(h)]

8. **Emissions testing.** If the permittee uses manual emissions testing to demonstrate compliance for one or more EGUs in the emissions averaging group, the permittee shall use the results from the most recent performance test to determine the 30 (or 90) day rolling average. The permittee may use CEMS or sorbent trap data in combination with data from the most recent manual performance test in calculating the 30 (or 90) group boiler operating day rolling average emissions rate. [§63.10009(i)]

9. **Emissions averaging plan.** The permittee shall develop an implementation plan for emissions averaging according to the following procedures and requirements in §63.10009(j)(1) and (2). [§63.10009(j)]
a) The permittee shall include the information contained in §63.10009(j)(1)(i) through (v) in the implementation plan for all the emissions units included in an emissions averaging: §63.10009(j)(1)

i) The identification of all existing EGUs in the emissions averaging group, including for each either the applicable HAP emission level or the control technology installed as of 180 days after February 16, 2015, or the date on which the permittee completes the emissions measurements used to support the emissions averaging plan (if the Administrator does not require submission and approval of the emissions averaging plan), or the date that the permittee begins emissions averaging, whichever is earlier; and the date on which the permittee is requesting emissions averaging to commence; §63.10009(j)(1)(i)

ii) The process weighting parameter (heat input, gross electrical output, or steam generated) that will be monitored for each averaging group; §63.10009(j)(1)(ii)

iii) The specific control technology or pollution prevention measure to be used for each emission EGU in the averaging group and the date of its installation or application. If the pollution prevention measure reduces or eliminates emissions from multiple EGUs, the permittee shall identify each EGU; §63.10009(j)(1)(iii)

iv) The means of measurement (e.g., CEMS, sorbent trap monitoring, manual performance test) of filterable PM, SO₂, HCl, individual or total non-Hg HAP metals, or Hg emissions in accordance with the requirements in §63.10007 and to be used in the emissions averaging calculations; and §63.10009(j)(1)(iv)

v) A demonstration that emissions averaging can produce compliance with each of the applicable emission limit(s) in accordance with §63.10009(b)(1). §63.10009(j)(1)(v)

b) If the Administrator requests the permittee submit the plan for review and approval, the permittee shall submit a complete implementation plan at least 120 days before April 16, 2015. If the Administrator requests the permittee submit the plan for review and approval, the permittee shall receive approval before initiating emissions averaging. §63.10009(j)(2)

i) The Administrator shall use following criteria in reviewing and approving or disapproving the plan: §63.10009(j)(2)(i)

(1) Whether the content of the plan includes all of the information specified in §63.10009(j)(1); and §63.10009(j)(2)(i)(A)

(2) Whether the plan presents information sufficient to determine that compliance will be achieved and maintained. §63.10009(j)(2)(i)(B)

ii) The Administrator shall not approve an emissions averaging implementation plan containing any of the following provisions: §63.10009(j)(2)(ii)

(1) Any averaging between emissions of different pollutants or between units located at different facilities; or §63.10009(j)(2)(ii)(A)

(2) The inclusion of any emissions unit other than an existing unit in the same subcategory. §63.10009(j)(2)(ii)(B)

**Monitoring, Installation, Operation, and Maintenance:**

1. Flue gases from the affected units under this subpart exhaust to the atmosphere through a variety of different configurations, including but not limited to individual stacks, a common stack configuration or a main stack plus a bypass stack. For the CEMS, PM CPMS, and sorbent trap monitoring systems used to provide data under MACT UUUUU, the continuous monitoring system installation requirements for these exhaust configurations are as follows: §63.10010(a)

a) **Single unit-single stack configurations.** For an affected unit that exhausts to the atmosphere through a single, dedicated stack, the permittee shall either install the required CEMS, PM
CPMS, and sorbent trap monitoring systems in the stack or at a location in the ductwork
downstream of all emissions control devices, where the pollutant and diluents concentrations are
representative of the emissions that exit to the atmosphere. [§63.10010(a)(1)]

2. If the permittee uses an O\textsubscript{2} or CO\textsubscript{2} CEMS to convert measured pollutant concentrations to the units
of the applicable emissions limit, the O\textsubscript{2} or CO\textsubscript{2} concentrations shall be monitored at a location that
represents emissions to the atmosphere, \textit{i.e.}, at the outlet of the EGU, downstream of all emission
control devices. The permittee shall install, certify, maintain, and operate the CEMS according to 40
CFR Part 75. Use only quality-assured O\textsubscript{2} or CO\textsubscript{2} data in the emissions calculations; do not use 40
CFR Part 75 substitute data values. [§63.10010(b)]

3. If the permittee is required to use a stack gas flow rate monitor, either for routine operation of a
sorbent trap monitoring system or to convert pollutant concentrations to units of an electrical output-
based emission standard in Table 2 to MACT UUUUU, the permittee shall install, certify, operate,
and maintain the monitoring system and conduct on-going quality-assurance testing of the system
according to 40 CFR Part 75. Use only unadjusted, quality-assured flow rate data in the emissions
calculations. Do not apply bias adjustment factors to the flow rate data and do not use substitute flow
rate data in the calculations. [§63.10010(c)]

4. If the permittee is required to make corrections for stack gas moisture content when converting
pollutant concentrations to the units of an emission standard in Table 2 to MACT UUUUU, the
permittee shall install, certify, operate, and maintain a moisture monitoring system in accordance
with 40 CFR Part 75. Alternatively, for coal-fired units, the permittee may use appropriate fuel-
specific default moisture values from §75.11(b) to estimate the moisture content of the stack gas. If
the permittee installs and operates a moisture monitoring system, do not use substitute moisture data
in the emissions calculations. [§63.10010(d)]

5. If the permittee uses an HCl CEMS, the permittee shall install, certify, operate, maintain, and
quality-assure the data from the monitoring system in accordance with MACT UUUUU Appendix
B. Calculate and record a 30-boiler operating day rolling average HCl emission rate in the units of
the standard, updated after each new boiler operating day. Each 30-boiler operating day rolling
average emission rate is the average of all the valid hourly HCl emission rates in the preceding 30
boiler operating days (see §9.4 of MACT UUUUU Appendix B). [§63.10010(e)]

6. If the permittee uses an SO\textsubscript{2} CEMS, the permittee shall install the monitor at the outlet of the EGU,
downstream of all emission control devices, and the permittee shall certify, operate, and maintain the
CEMS according to 40 CFR Part 75. [§63.10010(f)(1)]

7. For on-going QA, the SO\textsubscript{2} CEMS shall meet the applicable daily, quarterly, and semiannual or
annual requirements in §2.1 through 2.3 of Appendix B to 40 CFR Part 75, with the following
addition: The permittee shall perform the linearity checks required in §2.2 of Appendix B to 40 CFR
Part 75 if the SO\textsubscript{2} CEMS has a span value of 30 ppm or less. [§63.10010(f)(2)]

8. Calculate and record a 30-boiler operating day rolling average SO\textsubscript{2} emission rate in the units of the
standard, updated after each new boiler operating day. Each 30-boiler operating day rolling average
emission rate is the average of all of the valid SO\textsubscript{2} emission rates in the preceding 30 boiler
operating days. [§63.10010(f)(3)]

9. Use only unadjusted, quality-assured SO\textsubscript{2} concentration values in the emissions calculations; do not
apply bias adjustment factors to the 40 CFR Part 75 SO\textsubscript{2} data and do not use 40 CFR Part 75
substitute data values. [§63.10010(f)(4)]

10. If the permittee uses a Hg CEMS or a sorbent trap monitoring system, the permittee shall install,
certify, operate, maintain and quality-assure the data from the monitoring system in accordance with
MACT UUUUU Appendix A. The permittee shall calculate and record a 30- (or, if alternate
emissions averaging is used, 90-) boiler operating day rolling average Hg emission rate, in units of
the standard, updated after each new boiler operating day. Each 30- (or, if alternate emissions averaging is used, 90-) boiler operating day rolling average emission rate, calculated according to §6.2 of MACT UUUUU Appendix A, is the average of all of the valid hourly Hg emission rates in the preceding 30- (or, if alternate emissions averaging is used, a 90-) boiler operating days. §7.1.4.3 of MACT UUUUU Appendix A explains how to reduce sorbent trap monitoring system data to an hourly basis. [§63.10010(g)]

11. If the permittee uses a PM CPMS to demonstrate continuous compliance with an operating limit, the permittee shall install, calibrate, maintain, and operate the PM CPMS and record the output of the system as specified in §63.10010(h)(1) through (5): [§63.10010(h)]

a) Install, calibrate, operate, and maintain the PM CPMS according to the procedures in the approved site-specific monitoring plan developed in accordance with §63.10000(d), and meet the following requirements: [§63.10010(h)(1)]

i) The operating principle of the PM CPMS shall be based on in-stack or extractive light scatter, light scintillation, beta attenuation, or mass accumulation detection of the exhaust gas or representative sample. The reportable measurement output from the PM CPMS may be expressed as milliamps, stack concentration, or other raw data signal. [§63.10010(h)(1)(i)]

ii) The PM CPMS shall have a cycle time (i.e., period required to complete sampling, measurement, and reporting for each measurement) no longer than 60 minutes. [§63.10010(h)(1)(ii)]

iii) The PM CPMS shall be capable, at a minimum, of detecting and responding to PM concentrations of 0.5 mg/acm. [§63.10010(h)(1)(iii)]

b) For an existing unit, complete the initial performance evaluation no later than October 13, 2015. [§63.10010(h)(2)]

c) Collect PM CPMS hourly average output data for all boiler operating hours except as indicated in §63.10010(h)(5). Express the PM CPMS output as milliamps, PM concentration, or other raw data signal value. [§63.10010(h)(3)]

d) Calculate the arithmetic 30-boiler operating day rolling average of all of the hourly average PM CPMS output collected during all nonexempt boiler operating hours data (e.g., milliamps, PM concentration, raw data signal). [§63.10010(h)(4)]

e) The permittee shall collect data using the PM CPMS at all times the process unit is operating and at the intervals specified in §63.10010(h)(1)(ii), except for periods of monitoring system malfunctions, repairs associated with monitoring system malfunctions, required monitoring system quality assurance or quality control activities (including, as applicable, calibration checks and required zero and span adjustments), and any scheduled maintenance as defined in the site-specific monitoring plan. [§63.10010(h)(5)]

f) The permittee shall use all the data collected during all boiler operating hours in assessing the compliance with the operating limit except: [§63.10010(h)(6)]

i) Any data collected during monitoring system malfunctions, repairs associated with monitoring system malfunctions, or required monitoring system quality assurance or quality control activities conducted during monitoring system malfunctions are not used in calculations (report any such periods in the annual deviation report); [§63.10010(h)(6)(i)]

ii) Any data collected during periods when the monitoring system is out of control as specified in the site-specific monitoring plan, repairs associated with periods when the monitoring system is out of control, or required monitoring system quality assurance or quality control activities conducted during out-of-control periods are not used in calculations (report emissions or operating levels and report any such periods in the annual deviation report); [§63.10010(h)(6)(ii)]
iii) Any data recorded during periods of startup or shutdown. [§63.10010(h)(6)(iii)]
g) The permittee shall record and make available upon request results of PM CPMS system performance audits, as well as the dates and duration of periods from when the PM CPMS is out of control until completion of the corrective actions necessary to return the PM CPMS to operation consistent with the site-specific monitoring plan. [§63.10010(h)(7)]

12. If the permittee chooses to comply with the PM filterable emissions limit in lieu of metal HAP limits, the permittee may choose to install, certify, operate, and maintain a PM CEMS and record the output of the PM CEMS as specified in §63.10010(i)(1) through (5). The compliance limit will be expressed as a 30-boiler operating day rolling average of the numerical emissions limit value applicable for the unit in Table 2 to MACT UUUUU. [§63.10010(i)]

a) Install and certify the PM CEMS according to the procedures and requirements in Performance Specification 11—Specifications and Test Procedures for PM CEMS at Stationary Sources in NSPS Appendix B, using Method 5 at NSPS Appendix A–3 and ensuring that the front half filter temperature shall be 160° ± 14°C (320° ± 25°F). The reportable measurement output from the PM CEMS shall be expressed in units of the applicable emissions limit (e.g., lb/MmBtu, lb/MWh). [§63.10010(i)(1)]

b) Operate and maintain the PM CEMS according to the procedures and requirements in Procedure 2 — Quality Assurance Requirements for PM CEMS at Stationary Sources in NSPS Appendix F. [§63.10010(i)(2)]

i) The permittee shall conduct the relative response audit (RRA) for the PM CEMS at least once annually. [§63.10010(i)(2)(i)]

ii) The permittee shall conduct the relative correlation audit (RCA) for the PM CEMS at least once every three years. [§63.10010(i)(2)(ii)]

c) Collect PM CEMS hourly average output data for all boiler operating hours except as indicated in §63.10010(i). [§63.10010(i)(3)]

d) Calculate the arithmetic 30-boiler operating day rolling average of all of the hourly average PM CEMS output data collected during all nonexempt boiler operating hours. [§63.10010(i)(4)]

e) The permittee shall collect data using the PM CEMS at all times the process unit is operating and at the intervals specified in §63.10010(a), except for periods of monitoring system malfunctions, repairs associated with monitoring system malfunctions, and required monitoring system quality assurance or quality control activities. [§63.10010(i)(5)]

i) The permittee shall use all the data collected during all boiler operating hours in assessing the compliance with the operating limit except:

1) Any data collected during monitoring system malfunctions, repairs associated with monitoring system malfunctions, or required monitoring system quality assurance or control activities conducted during monitoring system malfunctions in calculations and report any such periods in the annual deviation report; [§63.10010(i)(5)(i)(A)]

2) Any data collected during periods when the monitoring system is out of control as specified in the site-specific monitoring plan, repairs associated with periods when the monitoring system is out of control, or required monitoring system quality assurance or control activities conducted during out of control periods in calculations used to report emissions or operating levels and report any such periods in the annual deviation report; [§63.10010(i)(5)(i)(B)]

3) Any data recorded during periods of startup or shutdown. [§63.10010(i)(5)(i)(C)]
completion of the corrective actions necessary to return the PM CEMS to operation consistent with the site-specific monitoring plan. [§63.10010(i)(5)(ii)]

13. The permittee may choose to comply with the metal HAP emissions limits using CEMS approved in accordance with §63.7(f) as an alternative to the performance test method specified in this rule. If approved to use a HAP metals CEMS, the compliance limit will be expressed as a 30-boiler operating day rolling average of the numerical emissions limit value applicable for the unit in Table 2 to MACT UUUUUU. If approved, the permittee may choose to install, certify, operate, and maintain a HAP metals CEMS and record the output of the HAP metals CEMS specified as follows: [§63.10010(j)]

a) Install and certify the HAP metals CEMS according to the procedures and requirements in the approved site specific test plan as required in §63.7(e). The reportable measurement output from the HAP metals CEMS shall be expressed in units of the applicable emissions limit (e.g., lb/MmBtu, lb/MWh) and in the form of a 30-boiler operating day rolling average. [§63.10010(j)(1)(i)]

b) Operate and maintain the HAP metals CEMS according to the procedures and criteria in the site specific performance evaluation and quality control program plan required in §63.8(d). [§63.10010(j)(1)(ii)]

c) Collect HAP metals CEMS hourly average output data for all boiler operating hours except as indicated in §63.10010(j)(4). [§63.10010(j)(2)]

d) Calculate the arithmetic 30-boiler operating day rolling average of all of the hourly average HAP metals CEMS output data collected during all nonexempt boiler operating hours data. [§63.10010(j)(3)]

e) The permittee shall collect data using the HAP metals CEMS at all times the process unit is operating and at the intervals specified in §63.10010(a), except for periods of monitoring system malfunctions, repairs associated with monitoring system malfunctions, and required monitoring system quality assurance or quality control activities. [§63.10010(j)(4)]

i) The permittee shall use all the data collected during all boiler operating hours in assessing the compliance with the emission limit except: [§63.10010(j)(4)(i)]

   (1) Any data collected during monitoring system malfunctions, repairs associated with monitoring system malfunctions, or required monitoring system quality assurance or control activities conducted during monitoring system malfunctions in calculations and report any such periods in the annual deviation report; [§63.10010(j)(4)(i)(A)]

   (2) Any data collected during periods when the monitoring system is out of control as specified in the site-specific monitoring plan, repairs associated with periods when the monitoring system is out of control, or required monitoring system quality assurance or control activities conducted during out of control periods in calculations used to report emissions or operating levels and report any such periods in the annual deviation report; [§63.10010(j)(4)(i)(B)]

   (3) Any data recorded during periods of startup or shutdown. [§63.10010(j)(4)(i)(C)]

ii) The permittee shall record and make available upon request results of HAP metals CEMS system performance audits, dates and duration of periods when the HAP metals CEMS is out of control to completion of the corrective actions necessary to return the HAP metals CEMS to operation consistent with the site-specific performance evaluation and quality control program plan. [§63.10010(j)(4)(ii)]
Demonstrating Initial Compliance:
1. The permittee shall demonstrate initial compliance with each emissions limit that applies by conducting performance testing. \([\text{§63.10011(a)}]\)
2. If the permittee is subject to an operating limit in Table 4 to MACT UUUUU, the permittee shall demonstrate initial compliance with HAP metals or filterable PM emission limit(s) through performance stack tests and the permittee elects to use a PM CPMS to demonstrate continuous performance, the permittee shall also establish a site-specific operating limit, in accordance with Table 4 to MACT UUUUU, \(\text{§63.10007}\), and Table 6 to MACT UUUUU. The permittee may use only the parametric data recorded during successful performance tests (i.e., tests that demonstrate compliance with the applicable emissions limits) to establish an operating limit. \([\text{§63.10011(b)}]\)
3. If the permittee uses CEMS or sorbent trap monitoring systems to measure a HAP (e.g., Hg or HCl) directly, the first 30-boiler operating day (or, if alternate emissions averaging is used for Hg, the 90-boiler operating day) rolling average emission rate obtained with certified CEMS after the applicable date in \(\text{§63.9984}\) (or, if applicable, prior to that date, as described in \(\text{§63.10005(b)(2)}\)), expressed in units of the standard, is the initial performance test. Initial compliance is demonstrated if the results of the performance test meet the applicable emission limit in Table 2 to MACT UUUUU. \([\text{§63.10011(c)(1)}]\)
4. For a unit that uses a CEMS to measure SO\(_2\) or PM emissions for initial compliance, the first 30 boiler operating day average emission rate obtained with certified CEMS after the applicable date in \(\text{§63.9984}\) (or, if applicable, prior to that date, as described in \(\text{§63.10005(b)(2)}\)), expressed in units of the standard, is the initial performance test. Initial compliance is demonstrated if the results of the performance test meet the applicable SO\(_2\) or filterable PM emission limit in Table 2 to MACT UUUUU. \([\text{§63.10011(c)(2)}]\)
5. For candidate LEE units, use the results of the performance testing described in \(\text{§63.10005(h)}\) to determine initial compliance with the applicable emission limit(s) in Table 2 to MACT UUUUU and to determine whether the unit qualifies for LEE status. \([\text{§63.10011(d)}]\)
6. The permittee shall submit a Notification of Compliance Status containing the results of the initial compliance demonstration, according to \(\text{§63.10030(e)}\). \([\text{§63.10011(e)}]\)
7. The permittee shall determine the fuel whose combustion produces the least uncontrolled emissions, i.e., the cleanest fuel, either natural gas or distillate oil, that is available on site or accessible nearby for use during periods of startup or shutdown. \([\text{§63.10011(f)(1)}]\)
8. The cleanest fuel, either natural gas or distillate oil, for use during periods of startup or shutdown determination may take safety considerations into account. \([\text{§63.10011(f)(2)}]\)
9. The permittee shall follow the startup or shutdown requirements given in Table 3 to MACT UUUUU for each coal-fired EGU. \([\text{§63.10011(g)}]\)

Monitoring and Data Collection:
1. The permittee shall monitor and collect data according to \(\text{§63.10020}\) and the site-specific monitoring plan required by \(\text{§63.10000(d)}\). \([\text{§63.10020(a)}]\)
2. The permittee shall operate the monitoring system and collect data at all required intervals at all times that the affected EGU is operating, except for periods of monitoring system malfunctions or out-of-control periods (see \(\text{§63.8(c)(7)}\)), and required monitoring system quality assurance or quality control activities, including, as applicable, calibration checks and required zero and span adjustments. The permittee is required to affect monitoring system repairs in response to monitoring system malfunctions and to return the monitoring system to operation as expeditiously as practicable. \([\text{§63.10020(b)}]\)
3. The permittee may not use data recorded during EGU startup or shutdown or monitoring system malfunctions or monitoring system out-of-control periods, repairs associated with monitoring system malfunctions or monitoring system out-of-control periods, or required monitoring system quality assurance or control activities in calculations used to report emissions or operating levels. The permittee shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. [§63.10020(c)]

4. Except for periods of monitoring system malfunctions or monitoring system out-of-control periods, repairs associated with monitoring system malfunctions or monitoring system out-of-control periods, and required monitoring system quality assurance or quality control activities including, as applicable, calibration checks and required zero and span adjustments), failure to collect required data is a deviation from the monitoring requirements. [§63.10020(d)]

**Demonstrating Continuous Compliance:**

1. The permittee shall demonstrate continuous compliance with each emissions limit, operating limit, and work practice standard in Tables 2 through 4 to MACT UUUUU that applies, according to the monitoring specified in Tables 6 and 7 to MACT UUUUU and §63.10021(b) through (g). [§63.10021(a)]

2. Except as otherwise provided in §63.10020(c), if the permittee uses a CEMS to measure SO₂, PM, HCl, or Hg emissions, or uses a sorbent trap monitoring system to measure Hg emissions, the permittee shall demonstrate continuous compliance by using all quality-assured hourly data recorded by the CEMS (or sorbent trap monitoring system) and the other required monitoring systems (e.g., flow rate, CO₂, O₂, or moisture systems) to calculate the arithmetic average emissions rate in units of the standard on a continuous 30-boiler operating day (or, if alternate emissions averaging is used for Hg, 90-boiler operating day) rolling average basis, updated at the end of each new boiler operating day. Use Equation 8 to determine the 30- (or, if applicable, 90-) boiler operating day rolling average.

\[
\text{Boiler operating day average} = \frac{\sum_{i=1}^{n} \text{Her}_i}{n} \quad \text{Equation 8}
\]

Where:
- \(\text{Her}_i\) is the hourly emissions rate for hour \(i\) and \(n\) is the number of hourly emissions rate values collected over 30- (or, if applicable, 90-) boiler operating days. [§63.10021(b)]

3. If the permittee uses a PM CPMS data to measure compliance with an operating limit in Table 4 to MACT UUUUU, the permittee shall record the PM CPMS output data for all periods when the process is operating and the PM CPMS is not out-of-control. The permittee shall demonstrate continuous compliance by using all quality-assured hourly average data collected by the PM CPMS for all operating hours to calculate the arithmetic average operating parameter in units of the operating limit (e.g., milliamps, PM concentration, raw data signal) on a 30 operating day rolling average basis, updated at the end of each new boiler operating day. Use Equation 9 to determine the 30 boiler operating day average.

\[
30 \text{ boiler operating day average} = \frac{\sum_{i=1}^{n} \text{Hpv}_i}{n} \quad \text{Equation 9}
\]

Where:
- \(\text{Hpv}_i\) is the hourly parameter value for hour \(i\) and \(n\) is the number of valid hourly parameter values collected over 30 boiler operating days. [§63.10021(c)]
4. If the permittee uses quarterly performance testing to demonstrate compliance with one or more applicable emissions limits in Table 2 to MACT UUUUU, the permittee: [§63.10021(d)]
   a) May skip performance testing in those quarters during which less than 168 boiler operating hours occur, except that a performance test shall be conducted at least once every calendar year. [§63.10021(d)(1)]
   b) Shall conduct the performance test as defined in Table 5 to MACT UUUUU and calculate the results of the testing in units of the applicable emissions standard; and [§63.10021(d)(2)]

5. If the permittee is required to conduct periodic performance tune-ups of the EGU(s), as specified in §63.10021(e)(1) through (9), perform the first tune-up as part of the initial compliance demonstration. Notwithstanding this requirement, the permittee may delay the first burner inspection until the next scheduled unit outage provided the permittee meets the requirements of §63.10005. Subsequently, the permittee shall perform an inspection of the burner at least once every 36 calendar months unless the EGU employs neural network combustion optimization during normal operations in which case the permittee shall perform an inspection of the burner and combustion controls at least once every 48 calendar months. [§63.10021(e)]
   a) As applicable, inspect the burner and combustion controls, and clean or replace any components of the burner or combustion controls as necessary upon initiation of the work practice program and at least once every required inspection period. Repair of a burner or combustion control component requiring special order parts may be scheduled as follows: [§63.10021(e)(1)]
      i) Burner or combustion control component parts needing replacement that affect the ability to optimize NOx and CO shall be installed within three calendar months after the burner inspection, [§63.10021(e)(1)(i)]
      ii) Burner or combustion control component parts that do not affect the ability to optimize NOx and CO may be installed on a schedule determined by the operator; [§63.10021(e)(1)(ii)]
   b) As applicable, inspect the flame pattern and make any adjustments to the burner or combustion controls necessary to optimize the flame pattern. The adjustment should be consistent with the manufacturer's specifications, if available, or in accordance with best combustion engineering practice for that burner type; [§63.10021(e)(2)]
   c) As applicable, observe the damper operations as a function of mill and/or cyclone loadings, cyclone and pulverizer coal feeder loadings, or other pulverizer and coal mill performance parameters, making adjustments and effecting repair to dampers, controls, mills, pulverizers, cyclones, and sensors; [§63.10021(e)(3)]
   d) As applicable, evaluate windbox pressures and air proportions, making adjustments and effecting repair to dampers, actuators, controls, and sensors; [§63.10021(e)(4)]
   e) Inspect the system controlling the air-to-fuel ratio and ensure that it is correctly calibrated and functioning properly. Such inspection may include calibrating excess O₂ probes and/or sensors, adjusting overfire air systems, changing software parameters, and calibrating associated actuators and dampers to ensure that the systems are operated as designed. Any component out of calibration, in or near failure, or in a state that is likely to negate combustion optimization efforts prior to the next tune-up, should be corrected or repaired as necessary; [§63.10021(e)(5)]
   f) Optimize combustion to minimize generation of CO and NOx. This optimization should be consistent with the manufacturer's specifications, if available, or best combustion engineering practice for the applicable burner type. NOx optimization includes burners, overfire air controls, concentric firing system improvements, neural network or combustion efficiency software, control systems calibrations, adjusting combustion zone temperature profiles, and add-on controls such as SCR and SNCR; CO optimization includes burners, overfire air controls, concentric firing system improvements, neural network or combustion efficiency software,
control systems calibrations, and adjusting combustion zone temperature profiles; [§63.10021(e)(6)]

g) While operating at full load or the predominantly operated load, measure the concentration in the effluent stream of CO and NOx in ppmv and O2 in volume percent, before and after the tune-up adjustments are made (measurements may be either on a dry or wet basis, as long as it is the same basis before and after the adjustments are made). The permittee may use portable CO, NOx and O2 monitors for this measurement. EGU's employing neural network optimization systems need only provide a single pre- and post-tune-up value rather than continual values before and after each optimization adjustment made by the system; [§63.10021(e)(7)]

h) Maintain on-site and submit, if requested by the Administrator, an annual report containing the information in §63.10021(e)(1) through (e)(9) including: [§63.10021(e)(8)]

1) The concentrations of CO and NOx in the effluent stream in ppmv, and O2 in volume percent, measured before and after an adjustment of the EGU combustion systems; [§63.10021(e)(8)(i)]

2) A description of any corrective actions taken as a part of the combustion adjustment; and [§63.10021(e)(8)(ii)]

3) The type(s) and amount(s) of fuel used over the 12 calendar months prior to an adjustment, but only if the unit was physically and legally capable of using more than one type of fuel during that period; and [§63.10021(e)(8)(iii)]

i) Report the dates of the initial and subsequent tune-ups as follows: [§63.10021(e)(9)]

1) If the first required tune-up is performed as part of the initial compliance demonstration, report the date of the tune-up in hard copy (as specified in §63.10030) and electronically (as specified in §63.10031). Report the date of each subsequent tune-up electronically (as specified in §63.10031). [§63.10021(e)(9)(i)]

2) If the first tune-up is not conducted as part of the initial compliance demonstration, but is postponed until the next unit outage, report the date of that tune-up and all subsequent tune-ups electronically, in accordance with §63.10031. [§63.10021(e)(9)(ii)]

6. The permittee shall submit the reports required under §63.10031 and, if applicable, the reports required under MACT UUUUU Appendices A and B. The electronic reports required by MACT UUUUU Appendices A and B shall be sent to the Administrator electronically in a format prescribed by the Administrator, as provided in §63.10031. CEMS data (except for PM CEMS and any approved alternative monitoring using a HAP metals CEMS) shall be submitted using EPA's Emissions Collection and Monitoring Plan System (ECMPS) Client Tool. Other data, including PM CEMS data, HAP metals CEMS data, and CEMS performance test detail reports, shall be submitted in the file format generated through use of EPA's Electronic Reporting Tool, the Compliance and Emissions Data Reporting Interface, or alternate electronic file format, all as provided for under §63.10031. [§63.10021(f)]

7. The permittee shall report each instance in which the permittee did not meet an applicable emissions limit or operating limit in Tables 2 through 4 to MACT UUUUU or failed to conduct a required tune-up. These instances are deviations from the requirements of MACT UUUUU. These deviations shall be reported according to §63.10031. [§63.10021(g)]

8. The permittee shall retain records as specified in §63.10032 during periods of startup and shutdown. [§63.10021(h)]

9. The permittee shall provide reports as specified in §63.10031 concerning activities and periods of startup and shutdown. [§63.10021(i)]

**Demonstrating Continuous Compliance using Emissions Averaging:**

1. Following the compliance date, the permittee shall demonstrate compliance with MACT UUUUU on a continuous basis by meeting the following requirements: [§63.10022(a)]
   a) For each 30- (or 90-) day rolling average period, demonstrate compliance with the average weighted emissions limit for the existing units participating in the emissions averaging option as determined in §63.10009(f) and (g); [§63.10022(a)(1)]
   b) For each existing unit participating in the emissions averaging option that is equipped with PM CPMS, maintain the average parameter value at or below the operating limit established during the most recent performance test; [§63.10022(a)(2)]

2. Any instance where the permittee fails to comply with the continuous monitoring requirements in §63.10022(a)(1) through (3) is a deviation. [§63.10022(b)]

**PM CPMS:**

1. During the initial performance test or any such subsequent performance test that demonstrates compliance with the filterable PM, individual non-Hg HAP metals, or total non-Hg HAP metals limit in Table 2 to MACT UUUUU, record all hourly average output values (e.g., milliamps, stack concentration, or other raw data signal) from the PM CPMS for the periods corresponding to the test runs (e.g., nine one-hour average PM CPMS output values for three three-hour test runs). [§63.10023(a)]

2. Determine the operating limit as the highest one-hour average PM CPMS output value recorded during the performance test. The permittee shall verify an existing or establish a new operating limit after each repeated performance test. [§63.10023(b)]

3. The permittee shall operate and maintain the process and control equipment such that the 30 operating day average PM CPMS output does not exceed the operating limit determined in §63.10023(a) and (b). [§63.10023(c)]
Notifications:
1. The permittee shall submit all of the notifications in §§63.7(b) and (c), 63.8(e), (f)(4) and (6), and 63.9(b) through (h) that apply by the dates specified. [§63.10030(a)]
2. As specified in §63.9(b)(2), the permittee shall submit an Initial Notification not later than 120 days after April 16, 2012. [§63.10030(b)]
3. When the permittee is required to conduct a performance test, the permittee shall submit a Notification of Intent to conduct a performance test at least 30 days before the performance test is scheduled to begin. [§63.10030(d)]
4. When the permittee is required to conduct an initial compliance demonstration as specified in §63.10011(a), the permittee shall submit a Notification of Compliance Status according to §63.9(h)(2)(ii). The Notification of Compliance Status report shall contain all the following information, as applicable: [§63.10030(e)]
   a) A description of the affected source(s) including identification of which subcategory the source is in, the design capacity of the source, a description of the add-on controls used on the source, description of the fuel(s) burned, including whether the fuel(s) were determined by the permittee or EPA through a petition process to be a non-waste under §241.3, whether the fuel(s) were processed from discarded non-hazardous secondary materials within the meaning of §241.3, and justification for the selection of fuel(s) burned during the performance test. [§63.10030(e)(1)]
   b) Summary of the results of all performance tests and fuel analyses and calculations conducted to demonstrate initial compliance including all established operating limits. [§63.10030(e)(2)]
   c) Identification of whether the permittee plans to demonstrate compliance with each applicable emission limit through performance testing; fuel moisture analyses; performance testing with operating limits (e.g., use of PM CPMS); CEMS; or a sorbent trap monitoring system. [§63.10030(e)(3)]
   d) Identification of whether the permittee plans to demonstrate compliance by emissions averaging. [§63.10030(e)(4)]
   e) A signed certification that the permittee has met all applicable emission limits and work practice standards. [§63.10030(e)(5)]
   f) If the permittee had a deviation from any emission limit, work practice standard, or operating limit, the permittee shall also submit a brief description of the deviation, the duration of the deviation, emissions point identification, and the cause of the deviation in the Notification of Compliance Status report. [§63.10030(e)(6)]
   g) In addition to the information required in §63.9(h)(2), the notification of compliance status shall include the following: [§63.10030(e)(7)]
      i) A summary of the results of the annual performance tests and documentation of any operating limits that were reestablished during this test, if applicable. If the permittee is conducting stack tests once every three years consistent with §63.10006(b), the date of the last three stack tests, a comparison of the emission level the permittee achieved in the last three stack tests to the 50 percent emission limit threshold required in §63.10006(i), and a statement as to whether there have been any operational changes since the last stack test that could increase emissions. [§63.10030(e)(7)(i)]
      ii) Certifications of compliance, as applicable, and shall be signed by a responsible official stating: [§63.10030(e)(7)(ii)]
         (1) “This EGU complies with the requirements in §63.10021(a) to demonstrate continuous compliance.” and [§63.10030(e)(7)(ii)(A)]
         (2) “No secondary materials that are solid waste were combusted in any affected unit.” [§63.10030(e)(7)(ii)(B)]
**Reporting:**

1. The permittee shall submit each report in Table 8 to MACT UUUUU that applies. If the permittee is required to (or elects to) continuously monitor Hg and/or HCl emissions, the permittee shall also submit the electronic reports required under MACT UUUUU Appendix A and/or Appendix B, at the specified frequency. [§63.10031(a)]

2. Unless the Administrator has approved a different schedule for submission of reports under §63.10(a), the permittee shall submit each report by the date in Table 8 to MACT UUUUU and according to the following requirements: [§63.10031(b)]
   a) The first compliance report shall cover the period beginning on the compliance date that is specified for the affected source in §63.9984 and ending on June 30th or December 31st, whichever date is the first date that occurs at least 180 days after the compliance date that is specified for the source in §63.9984. [§63.10031(b)(1)]
   b) The first compliance report shall be postmarked or submitted electronically no later than July 31st or January 31st, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for the source in §63.9984. [§63.10031(b)(2)]
   c) Each subsequent compliance report shall cover the semiannual reporting period from January 1st through June 30th or the semiannual reporting period from July 1st through December 31st. [§63.10031(b)(3)]
   d) Each subsequent compliance report shall be postmarked or submitted electronically no later than July 31st or January 31st, whichever date is the first date following the end of the semiannual reporting period. [§63.10031(b)(4)]
   e) For each affected source that is subject to permitting regulations pursuant to 40 CFR Part 70, and if the permitting authority has established dates for submitting semiannual reports pursuant to §70.6(a)(3)(iii)(A), the permittee may submit the first and subsequent compliance reports according to the dates the permitting authority has established instead of according to the dates in §63.10031(b)(1) through (4). [§63.10031(b)(5)]

3. The compliance report shall contain the following information: [§63.10031(c)]
   a) The information required by the summary report located in §63.10(e)(3)(vi). [§63.10031(c)(1)]
   b) The total fuel use by each affected source subject to an emission limit, for each calendar month within the semiannual reporting period, including, but not limited to, a description of the fuel, whether the fuel has received a non-waste determination by EPA or the basis for concluding that the fuel is not a waste, and the total fuel usage amount with units of measure. [§63.10031(c)(2)]
   c) Indicate whether the permittee burned new types of fuel during the reporting period. If the permittee did burn new types of fuel the permittee shall include the date of the performance test where that fuel was in use. [§63.10031(c)(3)]
   d) Include the date of the most recent tune-up for each unit subject to the requirement to conduct a performance tune-up according to §63.10021(e). Include the date of the most recent burner inspection if it was not done every 36 (or 48) months and was delayed until the next scheduled unit shutdown. [§63.10031(c)(4)]

4. For each excess emissions occurring at an affected source where the permittee is using a CMS to comply with that emission limit or operating limit, the permittee shall include the information required in §63.10(e)(3)(v) in the compliance report specified in §63.10031(c). [§63.10031(d)]

5. Each affected source that has obtained a Title V operating permit pursuant to 40 CFR Part 70 shall report all deviations as defined in MACT UUUUU in the semiannual monitoring report required by §70.6(a)(3)(iii)(A). If an affected source submits a compliance report pursuant to Table 8 to MACT UUUUU along with, or as part of, the semiannual monitoring report required by §70.6(a)(3)(iii)(A), and the compliance report includes all required information concerning deviations from any
emission limit, operating limit, or work practice requirement in MACT UUUUU, submission of the compliance report satisfies any obligation to report the same deviations in the semiannual monitoring report. Submission of a compliance report does not otherwise affect any obligation the affected source may have to report deviations from permit requirements to the permit authority. [§63.10031(e)]

6. Within 60 days after the date of completing each performance test, the permittee shall submit the results of the performance tests required by this subpart to EPA's WebFIRE database by using the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). Performance test data shall be submitted in the file format generated through use of EPA's Electronic Reporting Tool (ERT) (see http://www.epa.gov/ttn/chief/ert/index.html). Only data collected using those test methods on the ERT Web site are subject to this requirement for submitting reports electronically to WebFIRE. Owners or operators who claim that some of the information being submitted for performance tests is confidential business information (CBI) shall submit a complete ERT file including information claimed to be CBI on a compact disk or other commonly used electronic storage media (including, but not limited to, flash drives) to EPA. The electronic media shall be clearly marked as CBI and mailed to U.S. EPA/OAPQS/CORE CBI Office, Attention: WebFIRE Administrator, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. The same ERT file with the CBI omitted shall be submitted to EPA via CDX as described earlier in §63.10031(f). At the discretion of the delegated authority, the permittee shall also submit these reports, including the confidential business information, to the delegated authority in the format specified by the delegated authority. [§63.10031(f)]

a) Within 60 days after the date of completing each CEMS (SO2, PM, HCl, and Hg) performance evaluation test, as defined in §63.2 and required by MACT UUUUU, the permittee shall submit the relative accuracy test audit (RATA) data (or, for PM CEMS, RCA and RRA data) required by this subpart to EPA's WebFIRE database by using the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). The RATA data shall be submitted in the file format generated through use of EPA's Electronic Reporting Tool (ERT) (http://www.epa.gov/ttn/chief/ert/index.html). Only RATA data compounds listed on the ERT Web site are subject to this requirement. Owners or operators who claim that some of the information being submitted for RATAs is confidential business information (CBI) shall submit a complete ERT file including information claimed to be CBI on a compact disk or other commonly used electronic storage media (including, but not limited to, flash drives) by registered letter to EPA and the same ERT file with the CBI omitted to EPA via CDX as described earlier in §63.10031(f)(1). The compact disk or other commonly used electronic storage media shall be clearly marked as CBI and mailed to U.S. EPA/OAPQS/CORE CBI Office, Attention: WebFIRE Administrator, MD C404–02, 4930 Old Page Rd., Durham, NC 27703. At the discretion of the delegated authority, the permittee shall also submit these RATAs to the delegated authority in the format specified by the delegated authority. [§63.10031(f)(1)]

b) For a PM CEMS, PM CPMS, or approved alternative monitoring using a HAP metals CEMS, within 60 days after the reporting periods ending on March 31st, June 30th, September 30th, and December 31st, the permittee shall submit quarterly reports to EPA's WebFIRE database by using the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). The permittee shall use the appropriate electronic reporting form in CEDRI or provide an alternate electronic file consistent with EPA's
reporting form output format. For each reporting period, the quarterly reports shall include all of
the calculated 30-boiler operating day rolling average values derived from the CEMS and PM
CPMS. [§63.10031(f)(2)]

c) Reports for an SO₂ CEMS, a Hg CEMS or sorbent trap monitoring system, an HCl CEMS, and
any supporting monitors for such systems (such as a diluent or moisture monitor) shall be
submitted using the ECMPS Client Tool, as provided for in MACT UUUUU Appendices A and
B and §63.10021(f). [§63.10031(f)(3)]

d) Submit the compliance reports required under §63.10031(c) and (d) and the notification of
compliance status required under §63.10030(e) to EPA's WebFIRE database by using the
Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's
Central Data Exchange (CDX) ([www.epa.gov/cdx](http://www.epa.gov/cdx)). The permittee shall use the appropriate
electronic reporting form in CEDRI or provide an alternate electronic file consistent with EPA's
reporting form output format. [§63.10031(f)(4)]

e) All reports required by this subpart not subject to the requirements in §63.10031(f)(1) through
(4) shall be sent to the Administrator at the appropriate address listed in §63.13. If acceptable to
both the Administrator and the permittee, these reports may be submitted on electronic media.
The Administrator retains the right to require submittal of reports subject to §63.10031(f)(1), (2),
and (3) in paper format. [§63.10031(f)(5)]

7. If the permittee had a malfunction during the reporting period, the compliance report shall include
the number, duration, and a brief description for each type of malfunction which occurred during the
reporting period and which caused or may have caused any applicable emission limitation to be
exceeded. [§63.10031(g)]

8. The permittee shall notify the Air Pollution Control Program’s Enforcement Section, P.O. Box 176,
Jefferson City, MO 65102, no later than ten days after an exceedance or a malfunction which could
cause an exceedance of the emission limitations.

9. The permittee shall report any deviations from the requirements of this permit condition in the semi-
annual monitoring report and annual compliance certification required by Section V of this permit.

Recordkeeping:

1. The permittee shall retain records according to §63.10032(a)(1) and (2). If the permittee is required to (or elects to) continuously monitor Hg and/or HCl emissions, the permittee shall also retain the records required under MACT UUUUU Appendix A and/or Appendix B. [§63.10032(a)]
   a) A copy of each notification and report that the permittee submitted to comply with MACT UUUUU, including all documentation supporting any Initial Notification or Notification of Compliance Status or semiannual compliance report that the permittee submitted, according to the requirements in §63.10(b)(2)(xiv). [§63.10032(a)(1)]
   b) Records of performance stack tests, fuel analyses, or other compliance demonstrations and performance evaluations, as required in §63.10(b)(2)(viii). [§63.10032(a)(2)]

2. For each CEMS and CPMS, the permittee shall retain the following records: [§63.10032(b)]
   a) Records described in §63.10(b)(2)(vi) through (xi). [§63.10032(b)(1)]
   b) Previous (i.e., superseded) versions of the performance evaluation plan as required in §63.8(d)(3). [§63.10032(b)(2)]
   c) Request for alternatives to relative accuracy test for CEMS as required in §63.8(f)(6)(i). [§63.10032(b)(3)]
   d) Records of the date and time that each deviation started and stopped, and whether the deviation occurred during a period of startup, shutdown, or malfunction or during another period. [§63.10032(b)(4)]

3. The permittee shall retain the records required in Table 7 to MACT UUUUU including records of all monitoring data and calculated averages for applicable PM CPMS operating limits to show continuous compliance with each emission limit and operating limit that applies. [§63.10032(c)]

4. For each EGU subject to an emission limit, the permittee shall also retain the following records: [§63.10032(d)]
   a) The permittee shall retain records of monthly fuel use by each EGU, including the type(s) of fuel and amount(s) used. [§63.10032(d)(1)]
   b) If the permittee combusts non-hazardous secondary materials that have been determined not to be solid waste pursuant to §241.3(b)(1), the permittee shall retain a record which documents how the secondary material meets each of the legitimacy criteria. If the permittee combusts a fuel that has been processed from a discarded non-hazardous secondary material pursuant to §241.3(b)(2), the permittee shall retain records as to how the operations that produced the fuel satisfies the definition of processing in §241.2. If the fuel received a non-waste determination pursuant to the petition process submitted under §241.3(c), the permittee shall retain a record which documents how the fuel satisfies the requirements of the petition process. [§63.10032(d)(2)]
   c) For an EGU that qualifies as an LEE under §63.10005(h), the permittee shall retain annual records that document that the emissions in the previous stack test(s) continue to qualify the unit for LEE status for an applicable pollutant, and document that there was no change in source operations including fuel composition and operation of air pollution control equipment that would cause emissions of the pollutant to increase within the past year. [§63.10032(d)(3)]

5. If the permittee elects to average emissions consistent with §63.10009, the permittee shall additionally retain a copy of the emissions averaging implementation plan required in §63.10009(g), all calculations required under §63.10009, including daily records of heat input or steam generation, as applicable, and monitoring records consistent with §63.10022. [§63.10032(e)]

6. The permittee shall retain records of the occurrence and duration of each startup and/or shutdown. [§63.10032(f)]

7. The permittee shall retain records of the occurrence and duration of each malfunction of an operation (i.e., process equipment) or the air pollution control and monitoring equipment. [§63.10032(g)]
8. The permittee shall retain records of actions taken during periods of malfunction to minimize emissions in accordance with §63.10000(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation. [§63.10032(h)]

9. The permittee shall retain records of the type(s) and amount(s) of fuel used during each startup or shutdown. [§63.10032(i)]

10. The records shall be in a form suitable and readily available for expeditious review, according to §63.10(b)(1). [§63.10033(a)]

11. As specified in §63.10(b)(1), the permittee shall retain each record for five years following the date of each occurrence, measurement, maintenance, corrective action, report, or record. [§63.10033(b)]

12. The permittee shall retain each record on site for at least two years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to §63.10(b)(1). The permittee may retain the records off site for the remaining three years. [§63.10033(c)]

13. Records shall be retained in either hard copy or electronic form.

14. These records shall be made available immediately for inspection to the Department of Natural Resources’ personnel upon request.

**General Provisions:**
The permittee shall refer to Table 9 to MACT UUUUU for MACT A applicability.

---

**PERMIT CONDITION (B-1 through B-4) – 008**

**Boilers Units 1, 2, 3 and 4**

10 CSR 10-6.060 Construction Permits Required
Construction Permit 0992-016B, Issued February 19, 2013

---

**Operational Limitations:**

1. Special Condition 1: The permittee is allowed to operate SO3 flue gas conditioning as necessary.

2. Special Condition 2: The ESP employed on each boiler shall be in use at all times the boilers are in use. The ESPs shall be operated in accordance with the manufacturer’s specifications so as to perform optimally in the collection of PM and to assure compliance with 10 CSR 10-6.405 Restriction of PM Emissions From Fuel Burning Equipment Used for Indirect Heating.

**Monitoring/Recordkeeping:**

1. Special Condition 20: The permittee shall retain records of all one hour average SO2 emission rates in lb/mmBtu of heat input. The beginning time and ending time for each one hour period shall be noted in the records.

2. Special Condition 21: All of the records shall be retained in such a manner as to be easily compared with one another and retained on site for at least five consecutive years, and shall be made available immediately to Department of Natural Resources’ personnel upon request.

**Reporting:**
The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.
**Emission Limitations:**
The permittee shall not cause or permit the emission into the atmosphere of gases containing more than 500 ppmv of SO₂ or more than 35 mg/m³ of H₂SO₄ or SO₃ or any combination of these gases averaged on any consecutive three-hour time period.

**Operational Limitation:**
These emergency engines shall only burn fuel oils #1 and #2 containing less than 0.05 percent sulfur.

**Monitoring/Recordkeeping:**
1. The permittee shall maintain fuel purchase receipts indicating the sulfur content of the fuel oil.
2. These records shall be made available immediately for inspection to the Department of Natural Resources' personnel upon request.
3. All records shall be maintained for five years.

**Reporting:**
1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.
2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

---

**PERMIT CONDITION (IC-1 through IC-4) – 002**
Emergency Fire Pumps¹

10 CSR 10-6.075 Maximum Achievable Control Technology Regulations

¹An existing emergency stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions shall comply with the applicable emission limitations and operating limitations no later than May 3, 2013. [§63.6595(a)(1)]

**Emission Limitations:**
None.
Operational Limitations:
1. At all times the permittee shall operate and maintain the affected engine in a manner consistent with safety and good air pollution control practices for minimizing emissions. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the engine. [§63.6605(b)]

2. The permittee must meet the following requirements, except during periods of engine startup: [§63.6602 and Table 2c to MACT ZZZZ]
   a) Change the engine oil and oil filter every 500 hours of operation or annually, whichever comes first;
   b) Inspect the air cleaner every 1,000 hours of operation or annually, whichever comes first, and replace as necessary;
   c) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.
   d) During periods of startup the permittee shall minimize the engine’s time spent at idle and minimize the engine’s startup time at startup to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the non-startup emission limitations apply.

3. Beginning January 1, 2015, the permittee shall use diesel fuel that meets the requirements in §80.510(b) for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted. [§63.6604(b)]

4. The permittee shall only operate the emergency stationary RICE according to the requirements in §63.6640(f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under MACT ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in §63.6640(f)(1) through (4), is prohibited. If the permittee does not operate the engine according to the requirements of §63.6640(f)(1) through (4), the engine will not be considered an emergency engine under MACT ZZZZ and shall meet the requirements for non-emergency engines: [§63.6640(f)]
   a) There is no time limit on the use of emergency stationary RICE in emergency situations. [§63.6640(f)(1)]
   b) The permittee may operate the emergency stationary RICE for any combination of purposes specified in §63.6640(f)(2)(i) through (iii) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by §63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph. [§63.6640(f)(2)]
      i) Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by federal, state or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The permittee may petition the Administrator for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the permittee maintains records indicating that federal, state, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year. [§63.6640(f)(2)(i)]
      ii) Emergency stationary RICE may be operated for emergency demand response for periods in which the Reliability Coordinator under the North American Electric Reliability Corporation (NERC) Reliability Standard EOP-002-3, Capacity and Energy Emergencies (incorporated
by reference, see §63.14), or other authorized entity as determined by the Reliability Coordinator, has declared an Energy Emergency Alert Level 2 as defined in the NERC Reliability Standard EOP-002-3. [§63.6640(f)(2)(ii)]

iii) Emergency stationary RICE may be operated for periods where there is a deviation of voltage or frequency of five percent or greater below standard voltage or frequency. [§63.6640(f)(2)(iii)]

c) Emergency stationary RICE located at major sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing and emergency demand response provided in §63.6640(f)(2). The 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to supply power to an electric grid or otherwise supply power as part of a financial arrangement with another entity. [§63.6640(f)(3)]

d) Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing and emergency demand response provided in §63.6640(f)(2). Except as provided in §63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to supply power to an electric grid or otherwise supply power as part of a financial arrangement with another entity. [§63.6640(f)(4)]

i) Prior to May 3, 2014, the 50 hours per year for non-emergency situations can be used for peak shaving or non-emergency demand response to generate income for a facility, or to otherwise supply power as part of a financial arrangement with another entity if the engine is operated as part of a peak shaving (load management program) with the local distribution system operator and the power is provided only to the facility itself or to support the local distribution system. [§63.6640(f)(4)(i)]

ii) The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met: [§63.6640(f)(4)(ii)]

(1) The engine is dispatched by the local balancing authority or local transmission and distribution system operator. [§63.6640(f)(4)(ii)(A)]

(2) The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region. [§63.6640(f)(4)(ii)(B)]

(3) The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines. [§63.6640(f)(4)(ii)(C)]

(4) The power is provided only to the facility itself or to support the local transmission and distribution system. [§63.6640(f)(4)(ii)(D)]

(5) The permittee identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the permittee. [§63.6640(f)(4)(ii)(E)]

5. If the emergency diesel fire pump is operating during an emergency and it is not possible to shut down the engine in order to perform the work practice requirements on the schedule required above, or if performing the work practice on the required schedule would otherwise pose an unacceptable
risk under Federal, State, or local law, the work practice can be delayed until the emergency is over or the unacceptable risk under Federal, State, or local law has abated. The work practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. The permittee shall report any failure to perform the work practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable. [Footnote 1 to Table 2c to MACT ZZZZ]

6. During periods of startup the permittee shall minimize the engine's time spent at idle and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes. [§63.6625(h)]

7. The permittee has the option of utilizing an oil analysis program in order to extend the specified oil change requirements in Table 2c to MACT ZZZZ. The oil analysis shall be performed at every 500 hours of operation or annually. The analysis program shall at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the permittee is not required to change the oil. If any of the limits are exceeded, the permittee shall change the oil within two business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the permittee shall change the oil within two business days or before commencing operation, whichever is later. The permittee shall retain records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program shall be part of the maintenance plan for the engine. [§63.6625(i)]

8. The permittee shall install a non-resettable hour meter on this engine if one is not already installed. [§63.6625(f)]

General Provisions:
The permittee shall refer to Table 8 to MACT ZZZZ for MACT A applicability.

Recordkeeping:
The permittee shall retain the following records for this engine:
   a) Records of the occurrence and duration of each malfunction of process equipment. [§63.6655(a)(2)]
   b) Records of actions taken during periods of malfunction to minimize emissions including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation. [§63.6655(a)(5)]
   c) Records of all required maintenance performed on the air pollution control and monitoring equipment. [§63.6655(a)(4)]
   d) Records that the engine was operated and maintained according to the manufacturer's emission-related operation and maintenance instructions or that a maintenance plan has been developed to provide for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions. [§63.6640(e)]
   e) The permittee shall retain records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The permittee shall document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engine is used for the purposes specified in §63.6640(f)(2)(ii) or (iii) or §63.6640(f)(4)(ii), the permittee shall retain records of the
notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes. [§63.6655(f)]

2. The permittee shall retain manufacturer’s specification for each engine or shall develop and retain a Missouri Air Pollution Control Program approved site specific maintenance plan for each engine.

3. The permittee shall retain each record readily accessible in hard copy or electronic form for at least five years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to §63.10(b)(1). [§63.6660(c)]

4. These records must be made available for inspection upon request by Missouri Department of Natural Resources’ personnel.

**Reporting:**

1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.

2. The permittee shall report any failure to perform the work practice on the schedule required by Table 2c to MACT ZZZZ due to Federal, State, or local law under which the risk was deemed unacceptable. This report should be submitted with the semi-annual compliance report required by Section V General Permit Requirements of this permit. [Footnote 1 to Table 2c to MACT ZZZZ]

3. The permittee shall report any deviations from the operational limitations, recordkeeping and reporting requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit. These reports shall also include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period. The report shall also include a description of actions taken by the permittee during a malfunction of an affected source to minimize emissions, including actions taken to correct a malfunction. If there are no deviations from any operating limitations that apply, a statement that there were no deviations from the operating limitations during the reporting period shall be included. [§63.6650(c)(4) and (5)]

4. If the permittee is contractually obligated to have the emergency stationary RICE be available for more than 15 hours per calendar year for the purposes specified in §63.6640(f)(2)(ii) and (iii) or operate for the purpose specified in §63.6640(f)(4)(ii), the permittee shall submit an annual report according to the following requirements: [§63.6650(h)]
   a) The report shall contain the following information: [§63.6650(h)(1)]
      i) Company name and address where the engine is located. [§63.6650(h)(1)(i)]
      ii) Date of the report and beginning and ending dates of the reporting period. [§63.6650(h)(1)(ii)]
      iii) Engine site rating and model year. [§63.6650(h)(1)(iii)]
      iv) Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place. [§63.6650(h)(1)(iv)]
      v) Hours operated for the purposes specified in §63.6640(f)(2)(ii) and (iii), including the date, start time, and end time for engine operation for the purposes specified in §63.6640(f)(2)(ii) and (iii). [§63.6650(h)(1)(v)]
      vi) Number of hours the engine is contractually obligated to be available for the purposes specified in §63.6640(f)(2)(ii) and (iii). [§63.6650(h)(1)(vi)]
      vii) Hours spent for operation for the purpose specified in §63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in §63.6640(f)(4)(ii).
The report shall also identify the entity that dispatched the engine and the situation that
necessitated the dispatch of the engine. [§63.6650(h)(1)(vii)]

viii) If there were no deviations from the fuel requirements in §63.6604 that apply to the engine
(if any), a statement that there were no deviations from the fuel requirements during the
reporting period. [§63.6650(h)(1)(viii)]

ix) If there were deviations from the fuel requirements in §63.6604 that apply to the engine (if
any), information on the number, duration, and cause of deviations, and the corrective action
taken. [§63.6650(h)(1)(ix)]

b) The first annual report shall cover the calendar year 2015 and shall be submitted no later than
March 31, 2016. Subsequent annual reports for each calendar year shall be submitted no later
than March 31 of the following calendar year. [§63.6650(h)(2)]

c) The annual report shall be submitted electronically using the subpart specific reporting form in
the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's
Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to
MACT ZZZZ is not available in CEDRI at the time that the report is due, the written report shall
be submitted to the Administrator at the appropriate address listed in §63.13. [§63.6650(h)(3)]

PERMIT CONDITION (M-1 through M-4) – 001
Coal Handling and Storage
10 CSR 10-6.220 Restriction of Emission of Visible Air Contaminants

**Emission Limitation:**
1. The permittee shall not cause or permit to be discharged into the atmosphere from these emission
   units any visible emissions with an opacity greater than 20 percent.
2. Exception: The permittee may discharge into the atmosphere from any source of emissions for a
   period(s) aggregating not more than six minutes in any 60 minutes air contaminants with an opacity
   up to 40 percent.

**Monitoring:**
1. The permittee shall conduct opacity readings on these emission units using the procedures contained
   in U.S. EPA Test Method 22. Readings are only required when the emission unit is operating and
   when the weather conditions allow. For emission units with visible emissions, the permittee shall
   conduct a Method 9 to quantify the percent opacity.
2. The following monitoring schedule shall be maintained:
   a) Weekly observations shall be conducted for a minimum of eight consecutive weeks after permit
      issuance. Should no violation of this regulation be observed during this period then
   b) Observations shall be made once every two weeks for a period of eight weeks. If a violation is
      noted, monitoring reverts to weekly. Should no violation of this regulation be observed during
      this period then
   c) Observations shall be made once per month. If a violation is noted, monitoring reverts to weekly.
3. If the source reverts to weekly monitoring at any time, monitoring frequency will progress in an identical manner from the initial monitoring frequency.

4. For emission units with visible emissions exceeding the opacity standard, the permittee shall control emissions by performing at least one of the following BMPs:
   a) BMPs for stockpiles:
      i) Pavement of Stockpile Vehicle Activity Surfaces –
         (1) The permittee may pave all or any portion of the vehicle activity areas around the storage piles with materials such as asphalt, concrete, and/or other material(s) after receiving approval from the program. The pavement shall be applied in accordance with industry standards for such pavement so as to achieve control of fugitive emissions while the plant is operating.
         (2) Maintenance and/or repair of the road surface shall be conducted as necessary to ensure that the physical integrity of the pavement is adequate to achieve control of fugitive emissions from these areas while the plant is operating. The permittee shall document which ASTM standards the installation is complying with.
         (3) The permittee shall periodically water, wash and/or otherwise clean all of the paved portions of the vehicle activity areas around the storage piles as necessary to achieve control of fugitive emissions from these areas while the plant is operating.
      ii) Usage of Chemical Dust Suppressants –
         (1) The permittee shall apply a chemical dust suppressant (such as magnesium chloride, calcium chloride, lignosulfonates, etc.) to all the vehicle activity areas around the open storage piles. The suppressant shall be applied in accordance with the manufacturer’s suggested application rate (if available) and re-applied as necessary to achieve control of fugitive emissions from these areas while the plant is operating.
         (2) The permittee shall retain the manufacturer’s specifications for the chemical dust suppressant from which the application rate amount and frequency was taken.
         (3) The permittee shall record the time, date and the amount of material applied for each application of the chemical dust suppressant agent on the above areas. The permittee shall retain these records with the plant for not less than five years, and the permittee shall make these records available to Department of Natural Resources’ personnel upon request.
      iii) Usage of Documented Watering –
         (1) The permittee shall control the fugitive emissions from all the vehicle activity areas around the storage piles at the installation by consistently and correctly using the application of a water spray. Documented watering shall be applied in accordance with a recommended application rate of 100 gal/day per 1,000 ft² of unpaved/untreated surface area of vehicle activity areas around the storage piles as necessary to achieve control of fugitive emissions from these areas while the plant is operating. (Refer to example for documented watering of haul roads.)
         (2) The permittee shall maintain a log that documents daily water applications. This log shall include, but is not limited to, date and volumes (e.g., number of tanker applications and/or total gallons used) of water application. The log shall also record rationale for not applying water on day(s) the plant is in operations (e.g., meteorological situations, precipitation events, freezing, etc.)
         (3) Meteorological precipitation of any kind, (e.g. a quarter inch or more rainfall, sleet, snow, and/or freeze thaw conditions) which is sufficient in the amount or condition to achieve control of fugitive emissions from these areas while the plant is operating.
(4) Watering may also be suspended when the ground is frozen, during periods of freezing conditions when watering would be inadvisable for traffic safety reasons, or when there will be no traffic on the roads. The permittee shall record a brief description of such events in the same log as the documented watering.

(5) The permittee shall record the date and the amount of water applied for each application on the above areas. The permittee shall retain these records with the plant for not less than five years, and the permittee shall make these records available to Department of Natural Resources’ personnel upon request.

b) BMPs for haul roads:

i) Pavement of Road Surfaces –

(1) The permittee may pave all or any portion of the haul roads with materials such as asphalt, concrete, and/or other material(s) after receiving approval from the program. The pavement will be applied in accordance with industry standards for such pavement so as to achieve control of fugitive emissions while the plant is operating.

(2) Maintenance and/or repair of the road surface shall be conducted as necessary according to ASTM standards to ensure that the physical integrity of the pavement is adequate to achieve control of fugitive emissions from these areas while the plant is operating. The permittee shall document which ASTM standards the installation is complying with.

(3) The permittee shall periodically water, wash and/or otherwise clean all of the paved portions of the haul road(s) as necessary to achieve control of fugitive emissions from these areas while the plant is operating.

ii) Usage of Chemical Dust Suppressants –

(1) The permittee shall apply a chemical dust suppressant (such as magnesium chloride, calcium chloride, lignosulfonates, etc.) to all the unpaved portions of the haul roads. The suppressant shall be applied in accordance with the manufacturer’s suggested application rate (if available) and re-applied as necessary to achieve control of fugitive emissions from these areas while the plant is operating.

(2) The permittee shall retain the manufacturer’s specifications for the chemical dust suppressant from which the application rate amount and frequency was taken.

(3) The permittee shall record the time, date and the amount of material applied for each application of the chemical dust suppressant agent on the above areas. The permittee shall make these records available to Department of Natural Resources’ personnel upon request.

iii) Usage of Documented Watering –

(1) The permittee shall control the fugitive emissions from all the unpaved portions of the haul roads at the installation by consistently and correctly using the application of a water spray. Documented watering will be applied in accordance with a recommended application rate of 100 gal/day per 1,000 ft² of unpaved/untreated surface area of haul roads as necessary to achieve control of fugitive emissions from these areas while the plant is operating. For example, the permittee shall calculate the total square feet of unpaved vehicle activity area requiring control on any particular day, divide that product by 1,000, and multiply the quotient by 100 gallons for that day.

(2) The permittee shall retain a log that documents daily water applications. This log shall include, but is not limited to, date and volumes (e.g., number of tanker applications and/or total gallons used) of water application. The log shall also record rationale for not
applying water on day(s) the plant is in operation (e.g., meteorological situations, precipitation events, freezing, etc.)

(3) Meteorological precipitation of any kind, (e.g. a quarter inch or more rainfall, sleet, snow, and/or freeze thaw conditions) which is sufficient in the amount or condition to achieve control of fugitive emissions from these areas while the plant is operating.

(4) Watering may also be suspended when the ground is frozen, during periods of freezing conditions when watering would be inadvisable for traffic safety reasons, or when there will be no traffic on the roads. The permittee shall record a brief description of such events in the same log as the documented watering.

(5) The permittee shall record the date and the amount of water applied for each application on the above areas. The permittee shall retain these records with the plant for not less than five years, and the permittee shall make these records available to Department of Natural Resources’ personnel upon request.

**Recordkeeping:**

1. The permittee shall retain records of all observation results (see Attachments B and C or equivalent forms generated by the permittee), noting:
   a) Whether any air emissions (except for water vapor) were visible from the emission units and
   b) All emission units from which visible emissions occurred.
2. The permittee shall retain records of any equipment malfunctions, using Attachment D or an equivalent form generated by the permittee.
3. The permittee shall retain records of any BMPs performed in accordance with this permit condition.
4. These records shall be made available for inspection to the Department of Natural Resources’ personnel upon request.
5. All records shall be maintained for five years.

**Reporting:**

1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.
2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

</table>

**PERMIT CONDITION P1 – 001**

**Parts Washers**

10 CSR 10-5.300 Control of Emissions From Solvent Metal Cleaning

**Emission Limitations:**

1. The permittee shall not operate a cold cleaner using a solvent with a vapor pressure greater than 1.0 mm Hg at 20°C.
2. Exception: The permittee may use an alternative method for reducing cold cleaning emissions if the level of emission control is equivalent to or greater than the requirements listed above. The Director shall approve the alternative method.

**Operational Limitations/Equipment Specifications:**

1. Each cold cleaner shall have a cover, which prevents the escape of solvent vapors from the solvent bath while in the closed position, or an enclosed reservoir, which limits the escape of solvent vapors from the solvent bath whenever parts are not being processed in the cleaner.

2. When one or more of the following conditions exist, the design of the cover shall be such that it can be easily operated with one hand such that minimal disturbing of the solvent vapors in the tank occurs. (For covers larger than 10.0 ft², this shall be accomplished by either mechanical assistance such as spring loading or counter weighing or by power systems):
   a) The solvent vapor pressure is greater than 0.3 psi measured at 37.8°C (100°F), such as in mineral spirits.
   b) The solvent is agitated; or
   c) The solvent is heated.

3. Each cold cleaner shall have a drainage facility, which will be internal so that parts are enclosed under the cover while draining.

4. If an internal drainage facility cannot fit into the cleaning system and the solvent vapor pressure is less than 0.6 psi measured at 37.8°C (100°F), then the cold cleaner shall have an external drainage facility which provides for the solvent to drain back into the solvent bath.

5. Solvent sprays, if used, shall be a solid fluid stream (not a fine, atomized or shower-type spray) and at a pressure which does not cause splashing above or beyond the freeboard.

6. A permanent conspicuous label summarizing the operating procedures shall be affixed to the equipment or in a location readily visible during operation of the equipment.

7. Any cold cleaner which uses a solvent that has a solvent vapor pressure greater than 0.6 psi measured at 37.8°C (100°F) or is heated above 48.9°C (120°F), shall use one of the following control devices:
   a) A freeboard ratio of at least 0.75;
   b) Water cover (solvent shall be insoluble in and heavier than water); or
   c) Other control systems with a mass balance demonstrated overall VOC emissions reduction efficiency greater than or equal to 65 percent. These control systems shall receive approval from the Director prior to their use.

8. Each cold cleaner shall be operated as follows:
   a) Cold cleaner covers shall be closed whenever parts are not being handled in the cleaners or the solvent must drain into an enclosed reservoir except when performing maintenance or collecting solvent samples.
   b) Clean parts shall be drained in the freeboard area for at least 15 seconds or until dripping ceases, whichever is longer. Parts having cavities or blind holes shall be tipped or rotated while the part is draining. During the draining, tipping or rotating, the parts shall be positioned so that the solvent drains directly back to the cold cleaner.
   c) Whenever a cold cleaner fails to perform within the operating parameters established by this regulation, the unit shall be shut down immediately and shall remain shut down until trained service personnel are able to restore operation within the established operating procedures.
   d) Solvent leaks shall be repaired immediately or the cleaner shall be shut down and leaks secured until the leaks are repaired.
e) Any waste material removed from a cold cleaner shall be disposed of by one of the following methods in accordance with the Missouri Hazardous Waste Management Commission Rules codified as 10 CSR 25, as applicable:
   i) Reduction of the waste material to less than 20 percent VOC solvent by distillation and proper disposal of the still bottom waste, or
   ii) Stored in closed containers for transfer to a contract reclamation service or disposal facility approved by the Director.
   iii) Waste solvent shall be stored in covered containers only.

9. Operators shall be trained as follows:
   a) Only persons trained in at least the operation and equipment requirements specified in this rule for their particular solvent metal cleaning process shall be permitted to operate this equipment;
   b) The supervisor of any person who operates a solvent metal cleaning process shall receive equivalent or greater operational training than the operators; and
   c) Refresher training shall be given to all solvent metal cleaning equipment operators at least once every 12-month period.

**Monitoring:**
The permittee shall monitor the throughputs of the solvents monthly and retain MSDS of the cleanup solvents used at the installation.

**Recordkeeping:**
1. The permittee shall retain the following records for each purchase of cold cleaner solvent (see Attachment I or an equivalent form generated by the permittee):
   a) Name and address of the solvent supplier,
   b) Date of purchase,
   c) Type of solvent purchased, and
   d) Vapor pressure of solvent in mm Hg at 20°C or 68°F.
2. The permittee shall retain monthly inventory records of solvent types and amounts purchased and solvent consumed. The records shall include all types and amounts of solvent containing waste material transferred to either a contract reclamation service or to a disposal installation and all amounts distilled on the premises (see Attachment J or an equivalent form generated by the permittee). The record also shall include maintenance and repair logs that occurred on the cold cleaner (see Attachment D or an equivalent form generated by the permittee).
3. The permittee shall retain training records of solvent metal cleaning for each employee on an annual basis (see Attachment K or an equivalent form generated by the permittee).
4. All records shall be maintained for five years.
5. These records shall be made available for inspection to the Department of Natural Resources’ personnel upon request.

**Reporting:**
The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.
R1 – Gasoline Refueling Station

<table>
<thead>
<tr>

<tbody>
<tr>
<td>R1</td>
<td>2,385 gallon Gasoline Refueling Station</td>
</tr>
</tbody>
</table>

**PERMIT CONDITION R1-001**

Gasoline Refueling Station

10 CSR 10-5.220 Control of Petroleum Liquid Storage, Loading, and Transfer

**Operational Limitations:**

1. Gasoline Transfer.
   a) The permittee shall not cause or permit the transfer of gasoline from a delivery vessel into a gasoline storage tank with a capacity greater than 500 gallons unless—
      i) The storage tank is equipped with a submerged fill pipe extending unrestricted to within six inches of the bottom of the tank, and not touching the bottom of the tank, or the storage tank is equipped with a system that allows a bottom fill condition;
      ii) All storage tank caps and fittings are vapor-tight when gasoline transfer is not taking place; and
      iii) Each storage tank is vented via a conduit that is—
           (1) At least two inches inside diameter; and
           (2) At least 12 ft in height above grade; and
           (3) Equipped with a pressure/vacuum valve that is CARB certified and MO/PETP approved at three inches wcp/eight inches wcv except when the permittee provides documentation that the system is CARB certified or MO/PETP approved for a different valve and will not function properly with a three inches wcp/eight inches wcv valve. Initial fueling of motor vehicle systems and ancillary refueling systems previous MO/PETP approval applies for pressure/vacuum values.
   b) Stationary storage tanks having a volume greater than 1,000 and less than 40,000 gallons shall also be equipped with a Stage I vapor recovery system that has a collection efficiency of 98 percent that is based on MO/PETP.
      i) The vapor recovery system shall collect no less than 98 percent by volume of the vapors displaced from the stationary storage tank during gasoline transfer and shall return the vapors via a vapor-tight return line to the delivery vessel. All fill ports and vapor ports shall have Mo/PETP poppeted fittings.
      ii) This subsection shall not be construed to prohibit safety valves or other devices required by governmental regulations.
   c) The permittee shall not cause or permit the transfer of gasoline from a delivery vessel into a storage tank with a capacity greater than 1,000 gallons and less than 40,000 gallons unless—
      i) The permittee employs one vapor line per product line during the transfer. The staff director may approve other delivery systems upon submittal to the Department of test data demonstrating compliance with 10 CSR 10-5.220(3)(C)2.A;
      ii) The vapor hose(s) employed is no less than three inches inside diameter; and
      iii) The product hose(s) employed is no more than four inches inside diameter.

2. Fueling of Motor Vehicles.
   a) The permittee shall not install, permit the use of or maintain any stationary gasoline tank with a capacity of more than 1,000 gallons or operate an installation with a monthly throughput of greater than 10,000 gallons of gasoline through tanks in the 1,000 gallon or smaller class unless
the storage tank(s) is equipped with a vapor recovery system. The system shall be approved by the staff director based on the MO/PETP and shall be capable of—

i) Collecting the hydrocarbon vapors and gases discharged during motor vehicle fueling;

ii) Preventing their emission into the atmosphere; and

iii) Maintaining 95 percent efficiency of total capture and emission reduction.

b) No installation subject to this section shall employ remote vapor check valves.

c) No construction permit for modification or replacement of any equipment or component, including a like for like replacement, shall be approved unless the equipment or component is MO/PETP approved. If a construction permit is not required, no installation utilizing an approved system shall modify or replace any equipment or component, including a like for like replacement, unless the equipment or component is MO/PETP approved. In the event that the staff director finds a violation of this provision, the staff director may require replacement of components or equipment with MO/PETP approved components or equipment.

d) All tank gauging and sampling sites or ports, valves, breakaways, joints and disconnects on the vapor recovery systems shall be gas-tight to prevent VOC emissions except during gauging or sampling.

e) All vapor recovery systems shall be maintained in good working order in accordance with the manufacturer’s specifications and with no indication of visible liquid leaks.

f) The permittee shall post operation instructions conspicuously in the gasoline dispensing area for the system in use at each station. The instructions shall clearly describe how to fuel vehicles correctly with vapor recovery nozzles utilized at that station. The instructions shall also include a warning that repeated attempts to continue dispensing gasoline after the system has indicated that the vehicle fuel tank is full may result in spillage of gasoline.

g) The permittee shall ensure dispensing gasoline meets the requirements of §80.22(j) promulgated June 26, 1996 and hereby incorporated by reference in this rule, as published by the Office of Federal Register, U.S. National Archives and Records, 700 Pennsylvania Avenue NW, Washington, D.C. 20408. This rule does not incorporate any subsequent amendments or additions.

h) The staff director shall identify and list specific defects that substantially impair the effectiveness of components or systems used for the control of gasoline vapors resulting from motor vehicle fueling operations. This ongoing list shall be used by the staff director as a basis for marking the components or systems out-of-order and shall be made available to any gasoline dispensing installations. The list shall be made available to the installation’s designated person for use in performing system maintenance.

i) Upon the staff director’s identification of substantial defects in equipment or installation of a gasoline vapor control system, the system or components shall be marked “out-of-order” and the permittee shall not use or permit the use of that system or component until those defects and all other defects have been repaired, replaced or adjusted to establish compliance. The components or system may be released into operation when the staff director has reinspected the installation; found the system and components to be in good working order; and removed the “out-of-order” notice. The staff director shall reinspect the previously marked “out-of-order” system or component and other noted defects as expeditiously as possible after notification from the permittee that the repairs have been completed. In no case shall the reinspection be more than four business days from the permittee’s notification that the repairs have been completed. In those cases in which the reinspection cannot be scheduled within the required time, the permittee may remove the “out-of-order” notice with permission of the staff director. If reinspection reveals that compliance has not been established, the system or
components shall remain tagged “out-of-order.” The staff director shall conduct a second reinspection within seven business days from the permittee’s notification that repairs have been completed.

3. The permittee shall—
   a) Operate the vapor recovery system and the gasoline loading equipment in a manner that prevents—
      i) Gauge pressure from exceeding 4,500 pascals (18 in. of H2O) in the delivery vessel;
      ii) A reading equal to or greater than 100 percent of the lower explosive limit (LEL), measured as propane at 2.5 cm from all points on the perimeter of a potential leak source when measured by the method referenced in 10 CSR 10-6.030(14)(E) during loading or transfer operations; and
      iii) Visible liquid leaks during loading or transfer operations.
   b) A vapor recovery system that exceeds these limits shall be repaired and retested within 15 days.

Construction/Modification:
1. The permittee shall not construct or undergo vapor recovery system modification without first obtaining a construction permit. Owners, operators and contractors beginning construction without first obtaining a construction permit are subject to enforcement action.
   a) Existing installations that undergo vapor recovery system modification shall—
      i) Submit an application on a form supplied by the Department for a permit to construct prior to beginning modifications. After the effective date of this rule, any revision to the Department supplied forms will be presented to the regulated community for a 45-day comment period. Applications for construction permits shall be submitted for projects that include, but are not limited to:
         (1) Modifications that require breaking concrete in an area that may affect the vapor lines; and
         (2) Modifications that may affect the vapor lines themselves;
      ii) Supply any information required by the staff director for the specific installation. Such information may include, but not be limited to, plumbing diagrams, including vapor lines, vent lines, slope of vapor lines, material of all underground, above ground and dispenser plumbing, grade of site in relation to tanks, plumbing and dispensers, current CARB executive orders for the proposed system and equipment, and proof of compliance with all rules and requirements of the Department including those in Title 10 of the CSR;
      iii) Obtain a construction permit prior to beginning the modification. Continued operation during the construction requires Department approval. The Director shall issue a construction permit or a permit rejection within 30 days of receipt of the application. When an appeal is made following rejection of the application, that appeal shall be filed within 30 days of the notice of rejection;
      iv) Display the construction permit in a prominent location during construction;
      v) Establish a schedule for inspection and testing as required by the staff director and notify the Department seven calendar days prior to the anticipated completion date of underground piping and schedule a mutually acceptable inspection date. In the event that no mutually acceptable date is available, the staff director shall schedule the inspection date. The underground piping shall not be covered without visual inspection by the staff director. If defects are found, the staff director shall provide written notice of those defects;
      vi) Supply test results to the staff director;
vii) Receive staff director approval of final test methods and procedures that will be used to prove compliance;

viii) Within 30 days of completion of construction, conduct and pass final leak tests and dynamic back pressure/liquid blockage tests to show compliance with Department requirements. The staff director may observe the tests; and

ix) Upon completion of testing, obtain and display in a prominent location on-site the current operating permit from the Director for the specific site and the specific vapor recovery system that was installed.

**Operating Permit Renewal for Stage II Vapor Recovery System:**

1. Renewal of operating permits. The operating permit is renewable on the date specified in the initial operating permit and for periods of five years after the initial permit term expires. In order to renew the operating permit an installation shall—
   a) Demonstrate that the installation maintained all system components in good operating order during the preceding operating permit term including prompt efforts to establish compliance following “out-of-order” notices;
   b) Schedule staff director-approved tests prior to the expiration date of the permit, notify the staff director of test dates at least 14 days prior to test dates and provide documentation that the system passed the tests;
   c) An installation using a system that is decertified by CARB shall establish compliance with this rule within one year or by the next renewal date of the operating permit whichever is longer. Failure to establish compliance will result in nonrenewal of the operating permit; and
   d) No operating permit shall be renewed without documentation that the Stage II system in use at the installation can be demonstrated to achieve 95 percent efficiency. Replacement of equipment and/or components in place as part of an approved system on January 1, 1999, shall not be required as long as the equipment and/or components pass operating permit tests.

**Test Methods:**

1. Fueling of Motor Vehicles. The staff director may require a leak test, a back pressure blockage test, an air-to-liquid test, a pressure/vacuum valve test or may require any test or monitoring procedure in order to determine compliance with this rule.

2. Delivery vessel, vapor recovery system or gasoline loading equipment may be monitored by the staff director at any time by a method determined by the staff director to confirm continuing compliance with this rule.

3. An annual staff director-approved back pressure blockage test and/or air-to-liquid test may be required. Additional testing may also be required by the staff director in order to determine proper functioning of vapor recovery equipment.

4. All emission controls that are approved by the Director will not be considered federally enforceable, and will not shield a source from the federal obligation to comply with the underlying emission controls, by the EPA until submitted to EPA and approved by EPA in the SIP.

**Reporting/Recordkeeping:**

1. The permittee shall retain records documenting the vessel owners and number of delivery vessels unloaded by each owner. Records shall be retained for five years and made available to the staff director within five business days of a request. The permittee shall retain on-site copies of the loading ticket, manifest or delivery receipt for each grade of product received, subject to examination by the staff director upon request. If a delivery receipt is retained rather than a
manifest or loading ticket, the delivery ticket shall bear the following information: vendor name, date of delivery, quantity of each grade, and the manifest or loading ticket number. The required retention on-site of the loading ticket, manifest or delivery receipt shall be limited to the four most recent records for each grade of product.

2. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction, which could possibly cause an exceedance of this regulation.

3. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

<tr>
<td>Construction Permit 0792-006, Issued July 6, 1992</td>
</tr>
</tbody>
</table>

**Operational Limitation:**
Special Condition 1: Particulate emissions emanating from the dry vacuum/pressure fly ash handling system shall be controlled by baghouses. These baghouses shall be in use at all times that the fly ash handling system is in operation, and shall be operated and maintained in accordance with the manufacturer’s specifications. These baghouses shall be equipped with gauges or meters which indicate the pressure drop across the baghouses. These gauges or meters shall be located such that they may be easily observed by the Department of Natural Resources employees. Replacement bags shall be kept on hand at all times.

**Monitoring/Recordkeeping:**
1. The permittee shall monitor the operating pressure drop across the control devices while the unit is operating through an electronic distributed control system. The operating pressure drop shall be maintained within the design conditions specified by the manufacturer’s performance warranty.
2. The permittee shall retain the manufacturer’s specifications/performance warranty listing the recommended operating pressure drop range on site.
3. The permittee shall retain an operating and maintenance log for each control device using Attachment D or an equivalent form generated by the permittee. The record may be retained in hard copy or electronic form. The log(s) shall include the following:
   a) Incidents of malfunction, with impact on emissions, duration of the event, probable cause of the event, and corrective actions; and
   b) Maintenance activities, with inspection schedule, repair actions, and replacements, etc.
4. These records shall be made available for inspection to the Department of Natural Resources’ personnel upon request.
5. All records shall be maintained for five years.
**Reporting:**
The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and annual compliance certification required by Section V of this permit.

</thead>
<tbody>
<tr>
<td>Dry Fly Ash System</td>
</tr>
<tr>
<td>10 CSR 10-6.220 Restriction of Emission of Visible Air Contaminants</td>
</tr>
</tbody>
</table>

**Emission Limitations:**
1. The permittee shall not cause or permit to be discharged into the atmosphere from the emission units any visible emissions with an opacity greater than 20 percent.
2. Exception: A person may discharge into the atmosphere from any source of emissions for a period(s) aggregating not more than six minutes in any 60 minutes air contaminants with an opacity up to 40 percent.

**Monitoring:**
1. The permittee shall conduct opacity readings on these emission units using the procedures contained in U.S. EPA Test Method 22. Readings are only required when the emission unit is operating and when the weather conditions allow. If no visible are observed using these procedures, then no further observations would be required. For emission units with visible emissions, the permittee would then conduct a Method 9 observation.
2. The following monitoring schedule shall be maintained:
   a) Weekly observations shall be conducted for a minimum of eight consecutive weeks after permit issuance. Should no violation of this regulation be observed during this period then
   b) Observations shall be made once every two weeks for a period of eight weeks. If a violation is noted, monitoring reverts to weekly. Should no violation of this regulation be observed during this period then
   c) Observations shall be made once per month. If a violation is noted, monitoring reverts to weekly.
3. If the source reverts to weekly monitoring at any time, monitoring frequency will progress in an identical manner from the initial monitoring frequency.

**Recordkeeping:**
1. The permittee shall retain records of all observation results (see Attachments B & C, or equivalent forms generated by the permittee), noting:
   a) Whether any air emissions (except for water vapor) were visible from the emission units,
   b) All emission units from which visible emissions occurred, and
   c) Whether the visible emissions exceeded the opacity limit.
2. The permittee shall retain records of any equipment malfunctions, using Attachment D or an equivalent form generated by the permittee.
3. The permittee shall retain records of any U.S. EPA Method 9 opacity test performed in accordance with this permit condition.
4. These records shall be made available for inspection to the Department of Natural Resources’ personnel upon request.
5. All records shall be maintained for five years.
1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this regulation, or any malfunction which could possibly cause an exceedance of this regulation.

2. The permittee shall report any deviations from the requirements of this permit condition in the semiannual monitoring report and annual compliance certification required by Section V of this permit.
IV. Core Permit Requirements

The installation shall comply with each of the following regulations or codes. Consult the appropriate sections in the CFR and CSR for the full text of the applicable requirements. All citations, unless otherwise noted, are to the regulations in effect as of the date that this permit is issued. The following is only an excerpt from the regulation or code, and is provided for summary purposes only.

10 CSR 10-5.040 Use of Fuel in Hand-Fired Equipment Prohibited

It shall be unlawful to operate any hand-fired fuel-burning equipment in the St. Louis, Missouri metropolitan area. This regulation shall apply to all fuel-burning equipment including, but not limited to, furnaces, heating and cooking stoves and hot water furnaces. It shall not apply to wood-burning fireplaces and wood-burning stoves in dwellings, nor to fires used for recreational purpose, nor to fires used solely for the preparation of food by barbecuing. Hand-fired fuel-burning equipment is any stove, furnace, or other fuel-burning device in which fuel is manually introduced directly into the combustion chamber.

10 CSR 10-5.060 Refuse Not to be Burned in Fuel Burning Installations
(Contained in State Implementation Plan)

The permittee shall not burn or cause or permit the burning of refuse in any installation which is designed for the primary purpose of burning fuel.

10 CSR 10-5.120 Information on Sales of Fuels to be Provided and Maintained

Every delivery of coal or residual fuel oil when first delivered to a consumer or wholesaler in the St. Louis metropolitan area shall be accompanied by a ticket prepared in triplicate and containing at least the name and address of the seller and the buyer; the grade of fuel; ash content of coal, the source of the fuel, which shall be an approved source, and such other information as the Air Conservation Commission may require. One copy of each ticket shall be kept by the person delivering the fuel and be retained for one year; one copy is to be given to the recipient of the fuel to be retained for one year; and, upon request, within 30 days after delivery of the fuel, the delivering party shall mail one copy to the Air Conservation Commission.

10 CSR 10-5.130 Certain Coals to be Washed

The permittee shall not import, sell, offer for sale, expose for sale, exchange, deliver or transport for use and consumption in the St. Louis metropolitan area or use or consume in the said area any coal which as mined containing in excess of 2.0 percent sulfur or 12.0 percent ash calculated as described in 10 CSR 10-5.110, unless it has been cleaned by a process known as "washing" so that it shall contain no more than 12.0 percent ash on a dry basis. The term "washing" is meant to include purifying, cleaning, or removing impurities from coal by mechanical process, regardless of cleaning medium used.

Exception. This regulation shall not apply if the permittee can show that the emissions of SO2 from the plant in which the coal is to be burned will not exceed 2.3 pounds of SO2 per mmBtu of heat input to the installation and that emission of PM will be no more than that allowed in 10 CSR 10-6.405.
10 CSR 10-6.165 Control of Odors in the Ambient Air
This requirement is not federally enforceable.
The permittee shall not cause, permit, or allow the emission of odorous matter in concentrations and frequencies or for durations that odor can be perceived when one volume of odorous air is diluted with seven volumes of odor-free air for two separate trials not less than 15 minutes apart within the period of one hour. This odor evaluation shall be taken at a location outside of the installation’s property boundary.

10 CSR 10-5.240 Additional Air Quality Control Measures May be Required When Sources Are Clustered in a Small Land Area
1. The Air Conservation Commission may prescribe more restrictive air quality control requirements that are more restrictive and more extensive than provided in regulations of general application for:
   a) Areas in which there are one or more existing sources and/or proposed new sources of PM in any circular area with a diameter of two miles (including sources outside metropolitan area) from which the sum of particulate emissions allowed from these sources by regulations of general application are or would be greater than 2000 tpy or 500 lb/hr.
   b) Areas in which there are one or more existing sources and/or proposed new sources of SO₂ in any circular area with a diameter of two miles from which the sum of SO₂ emissions from these sources allowed by regulations of general application are or would be greater than 1000 tons for any consecutive three months or 1000 lb/hr.

10 CSR 10-6.045 Open Burning Requirements
1. General Provisions. The open burning of tires, petroleum-based products, asbestos containing materials, and trade waste is prohibited, except as allowed below. Nothing in this rule may be construed as to allow open burning which causes or constitutes a public health hazard, nuisance, a hazard to vehicular or air traffic, nor which violates any other rule or statute.
2. Refer to the regulation for a complete list of allowances. The following is a listing of exceptions to the allowances:
   a) Burning of household or domestic refuse. Burning of household or domestic refuse is limited to open burning on a residential premises having not more than four dwelling units, provided that the refuse originates on the same premises, with the following exceptions:
      i) St. Louis metropolitan area. The open burning of household refuse is prohibited;
   b) Yard waste, with the following exceptions:
      i) St. Louis metropolitan area. The open burning of trees, tree leaves, brush or any other type of vegetation is limited to the period beginning September 16th and ending April 14th of each calendar year and limited to a total base area not to exceed 16 ft². Any open burning shall be conducted only between the hours of 10:00 a.m. and 4:00 p.m. and is limited to areas outside of incorporated municipalities;
3. Certain types of materials may be open burned provided an open burning permit is obtained from the Director. The permit will specify the conditions and provisions of all open burning. The permit may be revoked if the permittee fails to comply with the conditions or any provisions of the permit.
4. The permittee may be issued an annually renewable open burning permit for open burning provided that an air curtain destructor or incinerator is utilized and only tree trunks, tree limbs, vegetation or untreated wood waste are burned. Open burning shall occur at least 200 yards from the nearest occupied structure unless the owner or operator of the occupied structure provides a written waiver of this requirement. Any waiver shall accompany the open burning permit application. The permit
may be revoked if the permittee fails to comply with the provisions or any condition of the open burning permit.

a) In a nonattainment area, as defined in 10 CSR 10-6.020(2)(N)10, the Director shall not issue a permit under this section unless the permittee can demonstrate to the satisfaction of the Director that the emissions from the open burning of the specified material would be less than the emissions from any other waste management or disposal method.

5. Reporting and Recordkeeping. NSPS CCCC establishes certain requirements for air curtain destructors or incinerators that burn wood trade waste. These requirements are established in §60.2245 - §60.2260. The provisions of NSPS CCCC promulgated as of September 22, 2005, shall apply and are hereby incorporated by reference in this rule, as published by the U.S. Government Printing Office, 732 N Capitol Street NW, Washington, DC 20401. To comply with §60.2245 - §60.2260, sources shall conduct an annual Method 9 test. A copy of the annual Method 9 test results shall be submitted to the Director.

10 CSR 10-6.050 Start-up, Shutdown and Malfunction Conditions

1. In the event of a malfunction, which results in excess emissions that exceed one hour, the permittee shall submit to the Director within two business days, in writing, the following information:
   a) Name and location of installation;
   b) Name and telephone number of person responsible for the installation;
   c) Name of the person who first discovered the malfunction and precise time and date that the malfunction was discovered.
   d) Identity of the equipment causing the excess emissions;
   e) Time and duration of the period of excess emissions;
   f) Cause of the excess emissions;
   g) Air pollutants involved;
   h) Best estimate of the magnitude of the excess emissions expressed in the units of the applicable requirement and the operating data and calculations used in estimating the magnitude;
   i) Measures taken to mitigate the extent and duration of the excess emissions; and
   j) Measures taken to remedy the situation that caused the excess emissions and the measures taken or planned to prevent the recurrence of these situations.

2. The permittee shall submit the information list above to the Director in writing at least ten days prior to any maintenance, start-up or shutdown, which is expected to cause an excessive release of emissions that exceed one hour. If notice of the event cannot be given ten days prior to the planned occurrence, it shall be given as soon as practicable prior to the release. If an unplanned excess release of emissions exceeding one hour occurs during maintenance, start-up or shutdown, the director shall be notified verbally as soon as practical during normal working hours and no later than the close of business of the following working day. A written notice shall follow within ten working days.

3. Upon receipt of a notice of excess emissions issued by an agency holding a certificate of authority under §643.140, RSMo, the permittee may provide information showing that the excess emissions were the consequence of a malfunction, start-up or shutdown. The information, at a minimum, should be the information listed above and shall be submitted not later than 15 days after receipt of
the notice of excess emissions. Based upon information submitted by the permittee or any other pertinent information available, the Director or the commission shall make a determination whether the excess emissions constitute a malfunction, start-up or shutdown and whether the nature, extent and duration of the excess emissions warrant enforcement action under §643.080 or §643.151, RSMo.

4. Nothing in this rule shall be construed to limit the authority of the Director or commission to take appropriate action, under §§643.080, 643.090 and 643.151, RSMo to enforce the provisions of the Air Conservation Law and the corresponding rule.

5. Compliance with this rule does not automatically absolve the permittee of liability for the excess emissions reported.

### 10 CSR 10-6.060 Construction Permits Required

The permittee shall not commence construction, modification, or major modification of any installation subject to this rule, begin operation after that construction, modification, or major modification, or begin operation of any installation which has been shut down longer than five years without first obtaining a permit from the permitting authority.

### 10 CSR 10-6.065 Operating Permits

The permittee shall file a complete application for renewal of this operating permit at least six months before the date of permit expiration. In no event shall this time be greater than 18 months. [10 CSR 10-6.065(6)(B)1.A(V)] The permittee shall retain the most current operating permit issued to this installation on-site. [10 CSR 10-6.065(6)(C)1.C(II)] The permittee shall make such permit available to any Missouri Department of Natural Resources’ personnel upon request. [10 CSR 10-6.065(6)(C)3.B]

1. The permittee shall follow the procedures and requirements of 40 CFR Part 61, Subpart M for any activities occurring at this installation which would be subject to provisions for 40 CFR Part 61, Subpart M - National Emission Standard for Asbestos.

2. The permittee shall conduct monitoring to demonstrate compliance with registration, certification, notification, and Abatement Procedures and Practices standards as specified in 40 CFR Part 61, Subpart M.

### 10 CSR 10-6.100 Alternate Emission Limits

Proposals for alternate emission limitations shall be submitted on Alternate Emission Limits Permit forms provided by the Department. The permittee shall obtain an Alternate Emission Limits Permit in accordance with 10 CSR 10-6.100 before alternate emission limits may become effective.

### 10 CSR 10-6.110 Submission of Emission Data, Emission Fees and Process Information

1. The permittee shall submit full emissions report either electronically via MoEIS, which requires Form 1.0 signed by an authorized company representative, or on EIQ paper forms on the frequency specified in this rule and in accordance with the requirements outlined in this rule. Alternate methods of reporting the emissions, such as spreadsheet file, can be submitted for approval by the director.

2. The permittee may be required by the director to file additional reports.

3. Public Availability of Emission Data and Process Information. Any information obtained pursuant to the rule(s) of the Missouri Air Conservation Commission that would not be entitled to confidential treatment under 10 CSR 10-6.210 shall be made available to any member of the public upon request.
4. The permittee shall pay an annual emission fee per ton of regulated air pollutant emitted according to the schedule in the rule. This fee is an emission fee assessed under authority of RSMo. §643.079.

5. The fees shall be payable to the Department of Natural Resources and shall be accompanied by the emissions report.

6. The permittee shall complete required reports on state supplied EIQ forms or electronically via MoEIS. Alternate methods of reporting the emissions can be submitted for approval by the director. The reports shall be submitted to the director by April 1 after the end of each reporting year. If the full emissions report is filed electronically via MoEIS, this due date is extended to May 1.

7. The reporting period shall end on December 31 of each calendar year. Each report shall contain the required information for each emission unit for the 12-month period immediately preceding the end of the reporting period.

8. The permittee shall collect, record, and maintain the information necessary to complete the required forms during each year of operation of the installation.

---

**10 CSR 10-6.130 Controlling Emissions During Episodes of High Air Pollution Potential**

This rule specifies the conditions that establish an air pollution alert (yellow/orange/red/purple), or emergency (maroon) and the associated procedures and emission reduction objectives for dealing with each. The permittee shall submit an appropriate emergency plan if required by the Director.

---

**10 CSR 10-6.150 Circumvention**

The permittee shall not cause or permit the installation or use of any device or any other means which, without resulting in reduction in the total amount of air contaminant emitted, conceals or dilutes an emission or air contaminant which violates a rule of the Missouri Air Conservation Commission.

---

**10 CSR 10-6.170 Restriction of PM to the Ambient Air Beyond the Premises of Origin**

**Emission Limitation:**

1. The permittee shall not cause or allow to occur any handling, transporting or storing of any material; construction, repair, cleaning or demolition of a building or its appurtenances; construction or use of a road, driveway or open area; or operation of a commercial or industrial installation without applying reasonable measures as may be required to prevent, or in a manner which allows or may allow, fugitive PM emissions to go beyond the premises of origin in quantities that the PM may be found on surfaces beyond the property line of origin. The nature or origin of the PM shall be determined to a reasonable degree of certainty by a technique proven to be accurate and approved by the Director.

2. The permittee shall not cause nor allow any fugitive PM emissions to remain visible in the ambient air beyond the property line of origin.

3. Should it be determined that noncompliance has occurred, the Director may require reasonable control measures as may be necessary. These measures may include, but are not limited to, the following:

   a) Revision of procedures involving construction, repair, cleaning and demolition of buildings and their appurtenances that produce PM emissions;
   
   b) Paving or frequent cleaning of roads, driveways and parking lots;
   
   c) Application of dust-free surfaces;
   
   d) Application of water; and
   
   e) Planting and maintenance of vegetative ground cover.
4. The staff director may allow an exemption for unusual and adverse weather conditions for any activity which would otherwise be a violation. These conditions may include, but are not limited to, high winds, extended dry weather periods and extreme cold weather periods.

**Monitoring:**
1. The permittee shall conduct inspections of its facilities sufficient to determine compliance with this regulation. If the permittee discovers a violation, the permittee shall undertake corrective action to eliminate the violation.
2. The permittee shall maintain the following monitoring schedule:
   a) The permittee shall conduct weekly observations for a minimum of eight consecutive weeks after permit issuance.
   b) Should no violation of this regulation be observed during this period then-
      i) The permittee may observe once every two weeks for a period of eight weeks.
      ii) If a violation is noted, monitoring reverts to weekly.
      iii) Should no violation of this regulation be observed during this period then-
         (1) The permittee may observe once per month.
         (2) If a violation is noted, monitoring reverts to weekly.
   c) If the permittee reverts to weekly monitoring at any time, monitoring frequency will progress in an identical manner to the initial monitoring frequency.

**Recordkeeping:**
1. The permittee shall document all readings on Attachment A, or its equivalent, noting the following:
   a) Whether air emissions (except water vapor) remain visible in the ambient air beyond the property line of origin.
   b) Any violations and any corrective actions undertaken to correct the violation.

**10 CSR 10-6.180 Measurement of Emissions of Air Contaminants**
1. The Director may require the permittee to undergo tests to determine the quantity or nature, or both, of emission of air contaminants from the source. The Director may specify testing methods to be used in accordance with good professional practice. The Director may observe the testing. All tests shall be performed by qualified personnel.
2. The Director may conduct tests of emissions of air contaminants from any source. Upon request of the Director, the permittee shall provide necessary ports in stacks or ducts and other safe and proper sampling and testing facilities, exclusive of instruments and sensing devices as may be necessary for proper determination of the emission of air contaminants.
3. The Director shall be given a copy of the test results in writing and signed by the person responsible for the tests.

**10 CSR 10-6.250 Asbestos Abatement Projects – Certification, Accreditation, and Business Exemption Requirements**
The permittee shall conduct all asbestos abatement projects within the procedures established for certification and accreditation by 10 CSR 10-6.250. This rule requires individuals who work in asbestos abatement projects to be certified by the Air Pollution Control Program. This rule requires training providers who offer training for asbestos abatement occupations to be accredited by the Air Pollution Control Program. This rule requires persons who hold exemption status from certain requirements of this rule to allow the Department to monitor training provided to employees. Each individual who works in asbestos abatement projects shall first obtain certification for the appropriate occupation from the
Department. Each person who offers training for asbestos abatement occupations must first obtain accreditation from the Department. Certain business entities that meet the requirements for state-approved exemption status shall allow the Department to monitor training classes provided to employees who perform asbestos abatement.

### 10 CSR 10-6.280 Compliance Monitoring Usage

1. The permittee is not prohibited from using the following in addition to any specified compliance methods for the purpose of submission of compliance certificates:
   a) Monitoring methods outlined in 40 CFR Part 64;
   b) Monitoring method(s) approved for the permittee pursuant to 10 CSR 10-6.065 Operating Permits, and incorporated into an operating permit; and
   c) Any other monitoring methods approved by the Director.

2. Any credible evidence may be used for the purpose of establishing whether a permittee has violated or is in violation of any such plan or other applicable requirement. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred by a permittee:
   a) Monitoring methods outlined in 40 CFR Part 64;
   b) A monitoring method approved for the permittee pursuant to 10 CSR 10-6.065 Operating Permits, and incorporated into an operating permit; and
   c) Compliance test methods specified in the rule cited as the authority for the emission limitations.

3. The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring, or information gathering methods:
   a) Applicable monitoring or testing methods, cited in:
      i) 10 CSR 10-6.030 Sampling Methods for Air Pollution Sources;
      ii) 10 CSR 10-6.040 Reference Methods;
      iii) 10 CSR 10-6.070 New Source Performance Standards;
      iv) 10 CSR 10-6.080 Emission Standards for Hazardous Air Pollutants; or
   b) Other testing, monitoring, or information gathering methods, if approved by the Director, that produce information comparable to that produced by any method listed above.

### Title VI – 40 CFR Part 82 Protection of Stratospheric Ozone

1. The permittee shall comply with the standards for labeling of products using ozone-depleting substances pursuant to 40 CFR Part 82, Subpart E:
   a) All containers in which a Class I or Class II substance is stored or transported, all products containing a Class I substance, and all products directly manufactured with a Class I substance shall bear the required warning statement if it is being introduced into interstate commerce pursuant to §82.106.
   b) The placement of the required warning statement shall comply with §82.108.
   c) The form of the label bearing the required warning statement shall comply with §82.110.
   d) The permittee shall not modify, remove, or interfere with the required warning statement except as described in §82.112.

2. The permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 CFR Part 82, Subpart F, except as provided for motor vehicle air conditioners (MVACs) in 40 CFR Part 82, Subpart B:
   a) Persons opening appliances for maintenance, service, repair, or disposal shall comply with §82.156.
b) Equipment used during the maintenance, service, repair, or disposal of appliances shall comply with the standards for recycling and recovery equipment pursuant to §82.158.

c) Persons performing maintenance, service, repair, or disposal of appliances shall be certified by an approved technician certification program pursuant to §82.161.

d) Persons disposing of small appliances, MVACs, and MVAC-like appliances shall comply with recordkeeping requirements pursuant to §82.166. ("MVAC-like" appliance as defined at §82.152).

e) Persons owning commercial or industrial process refrigeration equipment shall comply with the leak repair requirements pursuant to §82.156.

f) Owners/operators of appliances normally containing 50 or more pounds of refrigerant shall retain records of refrigerant purchased and added to such appliances pursuant to §82.166.

3. If the permittee manufactures, transforms, imports, or exports a Class I or Class II substance, the permittee is subject to all the requirements as specified in 40 CFR Part 82, Subpart A - Production and Consumption Controls.

4. If the permittee performs a service on motor (fleet) vehicles when this service involves ozone-depleting substance refrigerant (or regulated substitute substance) in the motor vehicle air conditioner (MVAC), the permittee is subject to all the applicable requirements as specified in 40 CFR Part 82, Subpart B - Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in 40 CFR Part 82, Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed. The term "MVAC" as used in 40 CFR Part 82, Subpart B does not include the air-tight sealed refrigeration system used as refrigerated cargo, or system used on passenger buses using HCFC-22 refrigerant.

5. The permittee shall be allowed to switch from any ozone-depleting substance to any alternative that is listed in the Significant New Alternatives Program promulgated pursuant to 40 CFR Part 82, Subpart G - Significant New Alternatives Policy Program. Federal Only - 40 CFR Part 82.
V. General Permit Requirements

The installation shall comply with each of the following requirements. Consult the appropriate sections in the CFR and CSR for the full text of the applicable requirements. All citations, unless otherwise noted, are to the regulations in effect as of the date that this permit is issued.

10 CSR 10-6.065(6)(C)1.B Permit Duration

This permit is issued for a term of five years, commencing on the date of issuance. This permit will expire at the end of this period unless renewed.

10 CSR 10-6.065(6)(C)1.C General Recordkeeping and Reporting Requirements

1. Recordkeeping
   a) All required monitoring data and support information shall be retained for a period of at least five years from the date of the monitoring sample, measurement, report or application.
   b) Copies of all current operating and construction permits issued to this installation shall be retained on-site for as long as the permits are in effect. Copies of these permits shall be made available to any Missouri Department of Natural Resources’ personnel upon request.

2. Reporting
   a) All reports shall be submitted to the Air Pollution Control Program’s Enforcement Section, P. O. Box 176, Jefferson City, MO 65102.
   b) The permittee shall submit a report of all required monitoring by:
      i) October 1st for monitoring which covers the January through June time period, and
      ii) April 1st for monitoring which covers the July through December time period.
      iii) Exception. Monitoring requirements which require reporting more frequently than semi-annually shall report no later than 30 days after the end of the calendar quarter in which the measurements were taken.
   c) Each report shall identify any deviations from emission limitations, monitoring, recordkeeping, reporting, or any other requirements of the permit, this includes deviations or 40 CFR Part 64 exceedances.
   d) Submit supplemental reports as required or as needed. Supplemental reports are required no later than ten days after any exceedance of any applicable rule, regulation or other restriction. All reports of deviations shall identify the cause or probable cause of the deviations and any corrective actions or preventative measures taken.
      i) Notice of any deviation resulting from an emergency (or upset) condition as defined in 10 CSR 10-6.065(6)(C)7.A shall be submitted to the permitting authority either verbally or in writing within two working days after the date on which the emission limitation is exceeded due to the emergency, if the permittee wishes to assert an affirmative defense. The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that indicate an emergency occurred and the permittee can identify the cause(s) of the emergency. The permitted installation must show that it was operated properly at the time and that during the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or requirements in the permit. The notice shall contain a description of the emergency, the steps taken to mitigate emissions, and the corrective actions taken.
ii) Any deviation that poses an imminent and substantial danger to public health, safety or the environment shall be reported as soon as practicable.

iii) Any other deviations identified in the permit as requiring more frequent reporting than the permittee's semi-annual report shall be reported on the schedule specified in this permit, and no later than ten days after any exceedance of any applicable rule, regulation, or other restriction.

e) Every report submitted shall be certified by the responsible official, except that, if a report of a deviation must be submitted within ten days after the deviation, the report may be submitted without a certification if the report is resubmitted with an appropriate certification within ten days after that, together with any corrected or supplemental information required concerning the deviation.

f) The permittee may request confidential treatment of information submitted in any report of deviation.

10 CSR 10-6.065(6)(C)1.D  Risk Management Plan Under Section 112(r)

1. The permittee shall comply with the requirements of 40 CFR Part 68 - Accidental Release Prevention Requirements. If the permittee has more than a threshold quantity of a regulated substance in process, as determined by §68.115, the permittee shall submit a Risk Management Plan in accordance with 40 CFR Part 68 no later than the latest of the following dates:
   a) June 21, 1999;
   b) Three years after the date on which a regulated substance is first listed under §68.130; or
   c) The date on which a regulated substance is first present above a threshold quantity in a process.

10 CSR 10-6.065(6)(C)1.E  Title IV Allowances

This permit prohibits emissions which exceed any allowances the installation holds under Title IV of the Clean Air Act.

No permit revisions shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program if the increases do not require a permit revision under any other applicable requirement.

Limits cannot be placed on the number of allowances that may be held by an installation. The installation may not use these allowances, however, as a defense for noncompliance with any other applicable requirement.

Any allowances held by a Title IV installation shall be accounted for according to procedures established in rules promulgated under Title IV of the Clean Air Act.

The permittee was granted an Acid Rain Permit (OP2012-012) on February 28, 2012 (see Attachment F). The Acid Rain Permit is effective until December 31, 2016. The permittee shall submit a renewal application no later than June 30, 2016.

10 CSR 10-6.065(6)(C)1.F  Severability Clause

In the event of a successful challenge to any part of this permit, all uncontested permit conditions shall continue to be in force. All terms and conditions of this permit remain in effect pending any administrative or judicial challenge to any portion of the permit. If any provision of this permit is invalidated, the permittee shall comply with all other provisions of the permit.
10 CSR 10-6.065(6)(C)1.G General Requirements
1. The permittee shall comply with all of the terms and conditions of this permit. Any noncompliance with a permit condition constitutes a violation and is grounds for enforcement action, permit termination, permit revocation and re-issuance, permit modification or denial of a permit renewal application.
2. The permittee may not use as a defense in an enforcement action that it would have been necessary for the permittee to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.
3. The permit may be modified, revoked, reopened, reissued or terminated for cause. Except as provided for minor permit modifications, the filing of an application or request for a permit modification, revocation and reissuance, or termination, or the filing of a notification of planned changes or anticipated noncompliance, does not stay any permit condition.
4. This permit does not convey any property rights of any sort, nor grant any exclusive privilege.
5. The permittee shall furnish to the Air Pollution Control Program, upon receipt of a written request and within a reasonable time, any information that the Air Pollution Control Program reasonably may require to determine whether cause exists for modifying, reopening, reissuing or revoking the permit or to determine compliance with the permit. Upon request, the permittee also shall furnish to the Air Pollution Control Program copies of records required to be retained by the permittee. The permittee may make a claim of confidentiality for any information or records submitted pursuant to 10 CSR 10-6.065(6)(C)1.

10 CSR 10-6.065(6)(C)1.H Incentive Programs Not Requiring Permit Revisions
No permit revision will be required for any installation changes made under any approved economic incentive, marketable permit, emissions trading, or other similar programs or processes provided for in this permit.

10 CSR 10-6.065(6)(C)1.I Reasonably Anticipated Operating Scenarios
Operational Limitations:
1. The permittee may burn the following acceptable materials generated on site:
   a) On specification used oil (and oil sorbents used in oil spill cleanup) according to the following specifications:
      i) §279.11 Used Oil Specifications
         (1) Table 1 — Used Oil Not Exceeding Any Allowable Level Shown Below Is Not Subject To This Part When Burned For Energy Recovery
         \[
         \begin{array}{|l|l|}
         \hline
         \text{Constituent/property} & \text{Allowable level} \\
         \hline
         \text{Arsenic} & 5 \text{ ppm maximum.} \\
         \text{Cadmium} & 2 \text{ ppm maximum.} \\
         \text{Chromium} & 10 \text{ ppm maximum.} \\
         \text{Lead} & 100 \text{ ppm maximum.} \\
         \text{Flash point} & 100^\circ \text{F minimum.} \\
         \text{Total halogens} & 4,000 \text{ ppm maximum.}^2 \\
         \hline
         \end{array}
         \]
         Note: Applicable standards for the burning of used oil containing PCBs are imposed by 40 CFR 761.20(e).
         
1The allowable levels do not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste (see §279.10(b)).
2Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste under the rebuttable presumption provided under §279.10(b)(1). Such used oil is subject to 40 CFR Part 266, Subpart H when burned for energy recovery unless the presumption of mixing can be successfully rebutted.
ii) Only burners in the automotive industry may burn used oil generated from automotive sources in used oil-fired space heaters provided the provisions of §279.23 are met. 
[§761.20(e)(1)(iii)]

iii) Testing of used oil fuel. Used oil to be burned for energy recovery is presumed to contain quantifiable levels (2 ppm) of PCB unless the marketer obtains analyses (testing) or other information that the used oil fuel does not contain quantifiable levels of PCBs. 
[§761.20(e)(2)]

(1) The person who first claims that a used oil fuel does not contain quantifiable level (2 ppm) PCB shall obtain analyses or other information to support that claim. 
[§761.20(e)(2)(i)]

(2) Testing to determine the PCB concentration in used oil may be conducted on individual samples, or in accordance with the testing procedures described in §761.60(g)(2). However, for purposes of this part, if any PCBs at a concentration of 50 ppm or greater have been added to the container or equipment, then the total container contents shall be considered as having a PCB concentration of 50 ppm or greater for purposes of complying with the disposal requirements of this part. 
[§761.20(e)(2)(ii)]

(3) Other information documenting that the used oil fuel does not contain quantifiable levels (2 ppm) of PCBs may consist of either personal, special knowledge of the source and composition of the used oil, or a certification from the person generating the used oil claiming that the oil contains no detectable PCBs. 
[§761.20(e)(2)(iii)]

b) Boiler cleaning waste:
  i) Shall not exceed 800,000 gallons in any rolling 12-month period.
  ii) The cleaning agent shall remain tetra-ammoniated EDTA or another non-HAP cleaning agent.

iii) The permittee shall retain MSDS for the cleaning agent to verify that the agent is HAP free.

c) Feedwater heater cleaning waste:
  i) Shall not exceed 15,000 gallons in any rolling 12-month period.
  ii) The cleaning agent shall remain ammonium persulfate.

d) Spent demineralizer resin from the boiler water purification system:
  i) Shall not exceed 15 tons in any rolling 12-month period.
  ii) The styrene/benzene content of the spent demineralizer resin shall not exceed 65 percent.
  iii) The permittee shall maintain MSDS documenting the HAP contents of all demineralizer resins burned within the boilers.

e) Used ethylene glycol:
  i) May be used as a freeze-conditioning agent for the coal supply.
  ii) Shall not exceed 1.75 tons in any rolling 12-month period.

2. The permittee may also burn the following acceptable materials that are transferred to the facility:

a) Records may be destroyed at the request of Franklin County. A county official shall be on site to supervise the burning of the records.

b) Confiscated materials may be destroyed at the request of the Franklin County Sheriff’s Department. An official from the Franklin County Sheriff’s Department shall be on site to supervise the burning of the confiscated materials.

3. Burning of acceptable materials shall only occur in Boilers 1, 2, 3, and 4.

4. Burning of acceptable materials shall only occur at or near full load to ensure that all changes to emissions are negligible.

5. No other materials may be burned by the facility without written consent from the Air Pollution Control Program.
**Recordkeeping:**
1. The permittee shall maintain a log, using Attachment L or an equivalent form generated by the permittee, of acceptable material usage containing the following information:
   a) Date of acceptable material burning.
   b) Type of acceptable material burned.
   c) Amount (tons) of acceptable material burned.
2. These records shall be made available for inspection to the Department of Natural Resources' personnel upon request.
3. All records shall be maintained for five years.

**Reporting:**
1. The permittee shall report to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedance of any of the terms imposed by this condition, or any malfunction which could possibly cause an exceedance of this condition.
2. The permittee shall report any deviations from the requirements of this permit condition in the semi-annual monitoring report and compliance certification required by Section V of this permit.

---

The permittee was granted an Acid Rain Permit (OP2012-012) on February 28, 2012 (see Attachment F). The Acid Rain Permit is effective until December 31, 2016. The permittee shall submit a renewal application no later than June 30, 2016.

The permittee applied for a CAIR Permit on July 2, 2007. The CAIR Permit has been incorporated into this Part 70 Operating Permit (see Attachment H). The CAIR Permit is effective as long as this Part 70 Operating Permit is effective. The permittee shall submit a renewal application for CAIR at the same time as they submit a renewal application for this Part 70 Operating Permit (six months prior to the expiration date).

---

**10 CSR 10-6.065(6)(C)3 Compliance Requirements**

1. Any document (including reports) required to be submitted under this permit shall contain a certification signed by the responsible official.
2. Upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the Missouri Department of Natural Resources, or their authorized agents, to perform the following (subject to the installation’s right to seek confidential treatment of information submitted to, or obtained by, the Air Pollution Control Program):
   a) Enter upon the premises where a permitted installation is located or an emissions-related activity is conducted, or where records must be kept under the conditions of this permit;
   b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
   c) Inspect, at reasonable times and using reasonable safety practices, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit; and
   d) As authorized by the Missouri Air Conservation Law, §643, RSMo or the Act, sample or monitor, at reasonable times, substances or parameters for the purpose of assuring compliance with the terms of this permit, and all applicable requirements as outlined in this permit.
3. All progress reports required under an applicable schedule of compliance shall be submitted semi-annually (or more frequently if specified in the applicable requirement). These progress reports shall contain the following:
   a) Dates for achieving the activities, milestones or compliance required in the schedule of compliance, and dates when these activities, milestones or compliance were achieved, and
   b) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventative or corrective measures adopted.
4. The permittee shall submit an annual certification that it is in compliance with all of the federally enforceable terms and conditions contained in this permit, including emissions limitations, standards, or work practices. These certifications shall be submitted annually by April 1<sup>st</sup>, unless the applicable requirement specifies more frequent submission. These certifications shall be submitted to EPA Region VII, 11201 Renner Blvd., Lenexa, KS 66219, as well as the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102. All deviations and 40 CFR Part 64 exceedances and excursions shall be included in the compliance certifications. The compliance certification shall include the following:
   a) The identification of each term or condition of the permit that is the basis of the certification;
   b) The current compliance status, as shown by monitoring data and other information reasonably available to the installation;
   c) Whether compliance was continuous or intermittent;
   d) The method(s) used for determining the compliance status of the installation, both currently and over the reporting period; and
   e) Such other facts as the Air Pollution Control Program will require in order to determine the compliance status of this installation.

**10 CSR 10-6.065(6)(C)6  Permit Shield**

1. Compliance with the conditions of this permit shall be deemed compliance with all applicable requirements as of the date that this permit is issued, provided that:
   a) The application requirements are included and specifically identified in this permit, or
   b) The permitting authority, in acting on the permit revision or permit application, determines in writing that other requirements, as specifically identified in the permit, are not applicable to the installation, and this permit expressly includes that determination or a concise summary of it.
2. Be aware that there are exceptions to this permit protection. The permit shield does not affect the following:
   a) The provisions of §303 of the Act or §643.090, RSMo concerning emergency orders,
   b) Liability for any violation of an applicable requirement which occurred prior to, or was existing at, the time of permit issuance,
   c) The applicable requirements of the acid rain program,
   d) The authority of EPA and the Air Pollution Control Program to obtain information, or
   e) Any other permit or extra-permit provisions, terms or conditions expressly excluded from the permit shield provisions.

**10 CSR 10-6.065(6)(C)7  Emergency Provisions**

1. An emergency or upset as defined in 10 CSR 10-6.065(6)(C)7 shall constitute an affirmative defense to an enforcement action brought for noncompliance with technology-based emissions limitations. To establish an emergency- or upset-based defense, the permittee must demonstrate, through properly signed, contemporaneous operating logs or other relevant evidence, the following:
a) That an emergency or upset occurred and that the permittee can identify the source of the emergency or upset,
b) That the installation was being operated properly,
c) That the permittee took all reasonable steps to minimize emissions that exceeded technology-based emissions limitations or requirements in this permit, and
d) That the permittee submitted notice of the emergency to the Air Pollution Control Program within two working days of the time when emission limitations were exceeded due to the emergency. This notice shall contain a description of the emergency, any steps taken to mitigate emissions, and any corrective actions taken.

2. Be aware that an emergency or upset shall not include noncompliance caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operator error.

### 10 CSR 10-6.065(6)(C)8 Operational Flexibility

1. An installation that has been issued a Part 70 operating permit is not required to apply for or obtain a permit revision in order to make any of the changes to the permitted installation described below if the changes are not Title I modifications, the changes do not cause emissions to exceed emissions allowable under the permit, and the changes do not result in the emission of any air contaminant not previously emitted. The permittee shall notify the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, as well as EPA Region VII, 11201 Renner Blvd., Lenexa, KS 66219, at least seven days in advance of these changes, except as allowed for emergency or upset conditions. Emissions allowable under the permit means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

2. §502(b)(10) changes. Changes that, under §502(b)(10) of the Act, contravene an express permit term may be made without a permit revision, except for changes that would violate applicable requirements of the Act or contravene federally enforceable monitoring (including test methods), recordkeeping, reporting or compliance requirements of the permit.
   a) Before making a change under this provision, The permittee shall provide advance written notice to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, as well as EPA Region VII, 11201 Renner Blvd., Lenexa, KS 66219, describing the changes to be made, the date on which the change will occur, and any changes in emission and any permit terms and conditions that are affected. The permittee shall retain a copy of the notice with the permit, and the Air Pollution Control Program shall place a copy with the permit in the public file. Written notice shall be provided to the EPA and the Air Pollution Control Program as above at least seven days before the change is to be made. If less than seven days’ notice is provided because of a need to respond more quickly to these unanticipated conditions, the permittee shall provide notice to the EPA and the Air Pollution Control Program as soon as possible after learning of the need to make the change.
   b) The permit shield shall not apply to these changes.

### 10 CSR 10-6.065(6)(C)9 Off-Permit Changes

1. Except as noted below, the permittee may make any change in its permitted operations, activities or emissions that is not addressed in, constrained by or prohibited by this permit without obtaining a permit revision. Insignificant activities listed in the application, but not otherwise addressed in or
prohibited by this permit, shall not be considered to be constrained by this permit for purposes of the off-permit provisions of this section. Off-permit changes shall be subject to the following requirements and restrictions:

a) The change shall meet all applicable requirements of the Act and may not violate any existing permit term or condition; the permittee may not change a permitted installation without a permit revision if this change is subject to any requirements under Title IV of the Act or is a Title I modification;
b) The permittee shall provide written notice of the change to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, as well as EPA Region VII, 11201 Renner Blvd., Lenexa, KS 66219, no later than the next annual emissions report.
c) This notice shall not be required for changes that are insignificant activities under 10 CSR 10-6.065(6)(B)3. This written notice shall describe each change, including the date, any change in emissions, pollutants emitted and any applicable requirement that would apply as a result of the change.
d) The permittee shall retain a record describing all changes made at the installation that result in emissions of a regulated air pollutant subject to an applicable requirement and the emissions resulting from these changes; and
e) The permit shield shall not apply to these changes.

**10 CSR 10-6.020(2)(R)12 Responsible Official**
The application utilized in the preparation of this permit was signed by Michael L. Menne, Vice President Environmental Services. In a letter dated March 8, 2011, Ameren designated the following individuals as Responsible Officials for the Labadie Plant:

David L. Strubberg – Labadie Plant Manager,
Daniel F. Cole – President & CEO Ameren Services,
David V. Fox – Director Fossil Generation, and
Michael L. Menne – Vice President Ameren Services.

If any of these individuals terminates employment, or is reassigned different duties such that a different person becomes the responsible person to represent and bind the installation in environmental permitting affairs, the permittee shall notify the Director of the Air Pollution Control Program of the change. Said notification shall be in writing and shall be submitted within 30 days of the change. The notification shall include the name and title of the new person assigned by the permittee to represent and bind the installation in environmental permitting affairs. All representations, agreement to terms and conditions and covenants made by the former responsible person that were used in the establishment of limiting permit conditions on this permit will continue to be binding on the installation until such time that a revision to this permit is obtained that would change said representations, agreements and covenants.

**10 CSR 10-6.065(6)(E)6 Reopening-Permit for Cause**
1. This permit may be reopened for cause if:
   a) The Missouri Department of Natural Resources receives notice from the EPA that a petition for disapproval of a permit pursuant to §70.8(d) has been granted, provided that the reopening may be stayed pending judicial review of that determination,
b) The Missouri Department of Natural Resources or EPA determines that the permit contains a material mistake or that inaccurate statements were made which resulted in establishing the emissions limitation standards or other terms of the permit,
c) Additional applicable requirements under the Act become applicable to the installation; however, reopening on this ground is not required if—:
   i) The permit has a remaining term of less than three years;
   ii) The effective date of the requirement is later than the date on which the permit is due to expire; or,
   iii) The additional applicable requirements are implemented in a general permit that is applicable to the installation and the installation receives authorization for coverage under that general permit,

d) The installation is an affected source under the acid rain program and additional requirements (including excess emissions requirements), become applicable to that source, provided that, upon approval by EPA, excess emissions offset plans shall be deemed to be incorporated into the permit; or

e) The Missouri Department of Natural Resources or EPA determines that the permit must be reopened and revised to assure compliance with applicable requirements.

### 10 CSR 10-6.065(6)(E)1.C Statement of Basis

This permit is accompanied by a statement setting forth the legal and factual basis for the permit conditions (including references to applicable statutory or regulatory provisions). This Statement of Basis, while referenced by the permit, is not an actual part of the permit.

<td>10A lb/ton</td>
<td>3.05</td>
<td>0.98</td>
<td>0.06</td>
<td>0.12</td>
<td>YES</td>
</tr>
</tbody>
</table>

The 10A lb/ton emission factor was taken from AP-42 Table 1.1-4 for Process SCC 10100226. The A stands for % Ash Content. The permittee reported a 5.35% Ash Content which was used to tabulate the Uncontrolled Emission Factors. An average heat content of 17.55148 mmBtu/ton was taken from the installation’s 2010 EIQ. These units are not in compliance with this regulation unless their control devices are in use and they have the potential to emit more than 100 tpy PM uncontrolled; therefore, CAM plans were created for these units (see Permit Condition (B1 through B4) – 003).
TITLE IV:
ACID RAIN PERMIT

In accordance with Titles IV and V of the Federal Clean Air Act and Missouri State Regulation 10 CSR 16-6.270 Acid Rain Source Permits Required, the State of Missouri issues this Acid Rain Permit.

Installation Name: Ameren - Labadie
Project Number: 2011-06-092
Unit ID: 1, 2, 3, and 4
Effective Dates: January 1, 2012 through December 31, 2016

The permit application submitted for this source, as corrected by the Missouri Department of Natural Resources' Air Pollution Control Program is attached. The permittee shall comply with the requirements set forth in this application.

The number of allowances actually held by the permittee in each unit's Allowance Tracking System account may differ from the number allocated by the U.S. EPA. Pursuant to §72.9(c) and §72.84 these differences do not necessitate a revision to any unit SO2 allowance allocations identified in this permit.

Pursuant to 40 CFR Part 76, the Missouri Department of Natural Resources' Air Pollution Control Program approves the Phase II NOx Compliance Plan and Phase II NOx Averaging Plan submitted for these units, effective for calendar years 2012 through 2016. These units qualify as Group 1, Phase I tangentially fired boilers per §73.10(a) and §76.2. In addition to complying with these NOx limits, the permittee shall comply with all other applicable requirements of 40 CFR Part 76, including the requirement to reapply for a NOx compliance plan and requirements covering excess emissions.

This acid rain permit is effective for the five-year period shown above per §72.69. The permittee shall submit an application for renewal of this permit no later than June 30, 2016, per §72.30 and in conjunction with the operating permit renewal application.

FEB 28 2012

EPA Form 7610-16 (Revised 12-2009)
Permit Requirements

STEP 3
Read the standard requirements.

(1) The designated representative of each affected source and each affected unit at the source shall:
   (i) Submit a complete Acid Rain permit application (including a compliance plan) under 40 CFR part 72 in accordance with the deadlines specified in 40 CFR 72.30; and
   (ii) Submit in a timely manner any supplemental information that the permitting authority determines is necessary in order to review an Acid Rain permit application and issue or deny an Acid Rain permit;
(2) The owners and operators of each affected source and each affected unit at the source shall:
   (i) Operate the unit in compliance with a complete Acid Rain permit application or a superseding Acid Rain permit issued by the permitting authority; and
   (ii) Have an Acid Rain Permit.

Monitoring Requirements

(1) The owners and operators and, to the extent applicable, designated representative of each affected source and each affected unit at the source shall comply with the monitoring requirements as provided in 40 CFR part 75.
(2) The emissions measurements recorded and reported in accordance with 40 CFR part 75 shall be used to determine compliance by the source or unit, as appropriate, with the Acid Rain emissions limitations and emissions reduction requirements for sulfur dioxide and nitrogen oxides under the Acid Rain Program.
(3) The requirements of 40 CFR part 75 shall not affect the responsibility of the owners and operators to monitor emissions of other pollutants or other emissions characteristics at the unit under other applicable requirements of the Act and other provisions of the operating permit for the source.

Sulfur Dioxide Requirements

(1) The owners and operators of each source and each affected unit at the source shall:
   (i) Hold allowances, as of the allowance transfer deadline, in the source’s compliance account (after deductions under 40 CFR 73.34(c)), not less than the total annual emissions of sulfur dioxide for the previous calendar year from the affected units at the source; and
   (ii) Comply with the applicable Acid Rain emissions limitations for sulfur dioxide.
(2) Each ton of sulfur dioxide emitted in excess of the Acid Rain emissions limitations for sulfur dioxide shall constitute a separate violation of the Act.
(3) An affected unit shall be subject to the requirements under paragraph (1) of the sulfur dioxide requirements as follows:
   (i) Starting January 1, 2000, an affected unit under 40 CFR 72.6(a)(2); or
   (ii) Starting on the later of January 1, 2000 or the deadline for monitor certification under 40 CFR part 75, an affected unit under 40 CFR 72.6(a)(3).
Sulfur Dioxide Requirements, Cont'd.

STEP 3, Cont'd.

(4) Allowances shall be held in, deducted from, or transferred among Allowance Tracking System accounts in accordance with the Acid Rain Program.

(5) An allowance shall not be deducted in order to comply with the requirements under paragraph (1) of the sulfur dioxide requirements prior to the calendar year for which the allowance was allocated.

(6) An allowance allocated by the Administrator under the Acid Rain Program is a limited authorization to emit sulfur dioxide in accordance with the Acid Rain Program. No provision of the Acid Rain Program, the Acid Rain permit application, the Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8 and no provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization.

(7) An allowance allocated by the Administrator under the Acid Rain Program does not constitute a property right.

Nitrogen Oxides Requirements

The owners and operators of the source and each affected unit at the source shall comply with the applicable Acid Rain emissions limitation for nitrogen oxides.

Excess Emissions Requirements

(1) The designated representative of an affected source that has excess emissions in any calendar year shall submit a proposed offset plan, as required under 40 CFR part 77.

(2) The owners and operators of an affected source that has excess emissions in any calendar year shall:

   (i) Pay without demand the penalty required, and pay upon demand the interest on that penalty, as required by 40 CFR part 77; and

   (ii) Comply with the terms of an approved offset plan, as required by 40 CFR part 77.

Recordkeeping and Reporting Requirements

(1) Unless otherwise provided, the owners and operators of the source and each affected unit at the source shall keep on site at the source each of the following documents for a period of 5 years from the date the document is created. This period may be extended for cause, at any time prior to the end of 5 years, in writing by the Administrator or permitting authority:

   (i) The certificate of representation for the designated representative for the source and each affected unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation, in accordance with 40 CFR 72.24; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such documents are superseded because of the submission of a new certificate of representation changing the designated representative;
Recordkeeping and Reporting Requirements, Cont’d.

STEP 3, Cont’d.

(i) All emissions monitoring information, in accordance with 40 CFR part 75, provided that to the extent that 40 CFR part 75 provides for a 3-year period for recordkeeping, the 3-year period shall apply.

(ii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the Acid Rain Program; and,

(iii) Copies of all documents used to complete an Acid Rain permit application and any other submission under the Acid Rain Program or to demonstrate compliance with the requirements of the Acid Rain Program.

(2) The designated representative of an affected source and each affected unit at the source shall submit the reports and compliance certifications required under the Acid Rain Program, including those under 40 CFR part 72 subpart I and 40 CFR part 75.

Liability

(1) Any person who knowingly violates any requirement or prohibition of the Acid Rain Program, a complete Acid Rain permit application, an Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8, including any requirement for the payment of any penalty owed to the United States, shall be subject to enforcement pursuant to section 113(c) of the Act.

(2) Any person who knowingly makes a false, material statement in any record, submission, or report under the Acid Rain Program shall be subject to criminal enforcement pursuant to section 113(c) of the Act and 18 U.S.C. 1001.

(3) No permit revision shall excuse any violation of the requirements of the Acid Rain Program that occurs prior to the date that the revision takes effect.

(4) Each affected source and each affected unit shall meet the requirements of the Acid Rain Program.

(5) Any provision of the Acid Rain Program that applies to an affected source (including a provision applicable to the designated representative of an affected source) shall also apply to the owners and operators of such source and of the affected units at the source.

(6) Any provision of the Acid Rain Program that applies to an affected unit (including a provision applicable to the designated representative of an affected unit) shall also apply to the owners and operators of such unit.

(7) Each violation of a provision of 40 CFR parts 72, 73, 74, 75, 76, 77, and 78 by an affected source or affected unit, or by an owner or operator or designated representative of such source or unit, shall be a separate violation of the Act.

Effect on Other Authorities

No provision of the Acid Rain Program, an Acid Rain permit application, an Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8 shall be construed as:

(1) Except as expressly provided in title IV of the Act, exempting or excluding the owners and operators and, to the extent applicable, the designated representative of an affected source or affected unit from compliance with any other provision of the Act, including the provisions of title I of the Act relating
Effect on Other Authorities, Cont'd.

to applicable National Ambient Air Quality Standards or State Implementation Plans;
(2) Limiting the number of allowances a source can hold; provided, that the
number of allowances held by the source shall not affect the source's
obligation to comply with any other provisions of the Act;
(3) Requiring a change of any kind in any State law regulating electric utility
rates and charges, affecting any State law regarding such State regulation, or
limiting such State regulation, including any prudence review requirements
under such State law;
(4) Modifying the Federal Power Act or affecting the authority of the Federal
Energy Regulatory Commission under the Federal Power Act; or,
(5) Interfering with or impairing any program for competitive bidding for power
supply in a State in which such program is established.

Certification

I am authorized to make this submission on behalf of the owners and
operators of the affected source or affected units for which the submission is
made. I certify under penalty of law that I have personally examined, and am
familiar with, the statements and information submitted in this document and
all its attachments. Based on my inquiry of those individuals with primary
responsibility for obtaining the information, I certify that the statements and
information are to the best of my knowledge and belief true, accurate, and
complete. I am aware that there are significant penalties for submitting false
statements and information or omitting required statements and information,
including the possibility of fine or imprisonment.

This submission is: [X] New [ ] Revised

## Step 1

Indicate plant name, State, and ORIS code from NADB, if applicable.

### Labadie

<table>
<thead>
<tr>
<th>Plant Name</th>
<th>MO</th>
<th>ORIS Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Labadie</td>
<td>MO</td>
<td>2103</td>
</tr>
</tbody>
</table>

## Step 2

Identify each affected Group 1 and Group 2 boiler using the boiler ID# from NADB, if applicable.

Indicate boiler type: "CB" for cell burner, "CY" for cyclone, "DBW" for dry bottom wall-fired, "T" for tangentially fired, "V" for vertically fired, and "WB" for wet bottom. Indicate the compliance option selected for each unit.

<table>

### Options

- (a) Standard annual average emission limitation of 0.50 lb/mmBtu (for Phase I dry bottom wall-fired boilers)
- (b) Standard annual average emission limitation of 0.45 lb/mmBtu (for Phase I tangentially fired boilers)
- (c) EPA-approved early election plan under 40 CFR 78.8 through 12/31/07 (also indicate above emission limit specified in plan)
- (d) Standard annual average emission limitation of 0.48 lb/mmBtu (for Phase II dry bottom wall-fired boilers)
- (e) Standard annual average emission limitation of 0.48 lb/mmBtu (for Phase II tangentially fired boilers)
- (f) Standard annual average emission limitation of 0.68 lb/mmBtu (for cell burner boilers)
- (g) Standard annual average emission limitation of 0.86 lb/mmBtu (for cyclone boilers)
- (h) Standard annual average emission limitation of 0.80 lb/mmBtu (for vertically fired boilers)
- (i) Standard annual average emission limitation of 0.84 lb/mmBtu (for wet bottom boilers)
- (j) NOₓ Averaging Plan (Include NOₓ Averaging form)

- (x) Common stack pursuant to 40 CFR 75.17(a)(2)(I)(A) (check the standard emission limitation box above for most stringent limitation applicable to any unit utilizing stack)
- (g) Common stack pursuant to 40 CFR 75.17(a)(2)(I)(B) with NOₓ Averaging (check the NOₓ Averaging Plan Box and include NOₓ Averaging form)
STEP 2, cont'd.

(m) EPA-approved common stack apportionment method pursuant to 40 CFR 75.17(b)(5)(II), (b)(5)(III)(B), or (b)(2)

(n) AER include Phase II AER Demonstration Period, Final AER Petition, or AER Renewal (form an appropriate)

(o) Petition for AER demonstration period or final AER under review by U.S. EPA or demonstration period ongoing

(p) Repowering extension plan approved or under review

STEP 3
Read the standard requirements and certification, enter the name of the designated representative, sign &

Standard Requirements

General. This source is subject to the standard requirements in 40 CFR 72.9 (consistent with 40 CFR 76.8(e)(1)(i)). These requirements are listed in this source's Acid Rain Permit.

Special Provisions for Early Election Units

Nitrogen Oxides. A unit that is governed by an approved early election plan shall be subject to an emissions limitation for NOx as provided under 40 CFR 76.8(a)(2) except as provided under 40 CFR 76.8(e)(3)(iii).

Liability. The owners and operators of a unit governed by an approved early election plan shall be liable for any violation of the plan or 40 CFR 76.8 at said unit. The owners and operators shall be liable, beginning January 1, 2000, for fulfilling the obligations specified in 40 CFR Part 77.

Termination. An approved early election plan shall be in effect only until the earlier of January 1, 2008 or January 1 of the calendar year for which a termination of the plan takes effect. If the designated representative of the unit under an approved early election plan fails to demonstrate compliance with the applicable emissions limitation under 40 CFR 76.5 for any year during the period beginning January 1 of the first year the early election takes effect ending December 31, 2007, the permitting authority will terminate the plan. The termination will take effect beginning January 1 of the year after the year for which there is a failure to demonstrate compliance, and the designated representative may not submit a new early election plan. The designated representative of the unit under an approved early election plan may terminate the plan any year prior to 2008 but may not submit a new early election plan. In order to terminate the plan, the designated representative must submit a notice under 40 CFR 72.40(d) by January 1 of the year for which the termination is to take effect. If an early election plan is terminated any year prior to 2000, the unit shall meet, beginning January 1, 2000, the applicable emissions limitation for NOx for Phase II units with Group 1 boilers under 40 CFR 76.7. If an early election plan is terminated on or after 2000, the unit shall meet, beginning on the effective date of the termination, the applicable emissions limitation for NOX for Phase II units with Group 1 boilers under 40 CFR 76.7.

Certification

I am authorized to make this submission on behalf of the owners and operators of the affected source or affected units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.

STEP 2

Use the formula to enter the Btu-weighted annual emission rate averaged over the units if they are operated in accordance with the proposed averaging plan and the Btu-weighted annual average emission rate for the same units if they are operated in compliance with 40 CFR 76.5, 76.6, or 76.7. The former must be less than or equal to the latter.

\[
\sum_{i=1}^{n} \frac{(R_s \times H_{Is})}{H_{Is}} \leq \sum_{i=1}^{n} \frac{[R_s \times H_{Is}]}{H_{Is}}
\]

Where,

- \( R_s \) = Alternative contemporaneous annual emission limitation for unit \( i \), in lb/mmBtu, as specified in column (b) of Step 1;
- \( R_s \) = Applicable emission limitation for unit \( i \), in lb/mmBtu, as specified in column (a) of Step 1;
- \( H_{Is} \) = Annual heat input for unit \( i \), in mmBtu, as specified in column (c) of Step 1;
- \( n \) = Number of units in the averaging plan
STEP 3
Mark one of the two options and enter dates.

☐ This plan is effective for calendar year __________ through calendar year __________ unless notification to terminate the plan is given.

☒ Treat this plan as # identical plans, each effective for one calendar year for the following calendar years: 2012, 2013, 2014, 2015, and 2016 unless notification to terminate one or more of these plans is given.

STEP 4
Read the special provisions and certification, enter the name of the designated representative, and sign and date.

Special Provisions
Emission Limitations

Each affected unit in an approved averaging plan is in compliance with the Acid Rain emission limitation for NOx under the plan only if the following requirements are met:

(i) For each unit, the unit's actual annual average emission rate for the calendar year, in lb/mnBtu, is less than or equal to its alternative contemporaneous annual emission limitation in the averaging plan, and

(a) For each unit with an alternative contemporaneous emission limitation less stringent than the applicable emission limitation in 40 CFR 76.5, 76.6, or 76.7, the actual annual heat input for the calendar year does not exceed the annual heat input limit in the averaging plan,

(b) For each unit with an alternative contemporaneous emission limitation more stringent than the applicable emission limitation in 40 CFR 76.5, 76.6, or 76.7, the actual annual heat input for the calendar year is not less than the annual heat input limit in the averaging plan,

(ii) If one or more of the units does not meet the requirements of (i), the designated representative shall demonstrate, in accordance with 40 CFR 76.11(d)(1)(ii)(A) and (B), that the actual Btu-weighted annual average emission rate for the units in the plan is less than or equal to the Btu-weighted annual average rate for the same units had they each been operated, during the same period of time, in compliance with the applicable emission limitations in 40 CFR 76.5, 76.6, or 76.7.

(iii) If there is a successful group showing of compliance under 40 CFR 76.11(d)(1)(ii)(A) and (B) for a calendar year, then all units in the averaging plan shall be deemed to be in compliance for that year with their alternative contemporaneous emission limitations and annual heat input limits under (i).

Liability

The owners and operators of a unit governed by an approved averaging plan shall be liable for any violation of the plan or this section at that unit or any other unit in the plan, including liability for fulfilling the obligations specified in part 77 of this chapter and sections 113 and 411 of the Act.

Termination

The designated representative may submit a notification to terminate an approved averaging plan, in accordance with 40 CFR 72.40(d), no later than October 1 of the calendar year for which the plan is to be terminated.

Certification

I am authorized to make this submission on behalf of the owners and operators of the affected source or affected units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.

Project Number: 2007-07-037; Permit Number: OP2011-020A
Unit IDs: Units 1, 2, 3, and 4

The permit application submitted for this source, as corrected by the State of Missouri Department of Natural Resources’ Air Pollution Control Program, Operating Permit Section, is attached. The permittee shall comply with the standard requirements and special provisions set forth in this application.

This CAIR Permit applies only to Units 1, 2, 3, and 4 at Ameren Labadie, plant 071-0003.

This CAIR permit is being issued in conjunction with this operating permit and is effective for the same period as stated on the cover page of the operating permit. The designated representative shall submit an application for renewal of this permit in conjunction with the operating permit renewal application.

Date

Director or Designee,
Department of Natural Resources
CAIR Permit Application
(for sources covered under a CAIR SIP)

For more information, refer to 40 CFR 96.121, 96.122, 96.221, 96.222, 96.321, and 96.322.

This submission is: X New 0 Revised

Plant Name Labadie
State MO ORIS/Facility Code 2103

Unit ID#  NOx Annual  SO2  NOx Ozone Season

1  X  X  X
2  X  X  X
3  X  X  X
4  X  X  X

STEP 1
Identify the source by plant name, state, and ORIS or facility code

STEP 2
Enter the unit ID# for each CAIR unit and indicate to which CAIR programs each unit is subject (by placing an "X" in the column)

STEP 3
Read the standard requirements and the certification, enter the name of the CAIR designated representative, and sign and date

Standard Requirements
(a) Permit Requirements.
   (1) The CAIR designated representative of each CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) required to have a Title V operating permit and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) required to have a Title V operating permit at the source shall:
      (i) Submit to the permitting authority a complete CAIR permit application under §§96.122, §96.222, and §96.322 (as applicable) in accordance with the deadlines specified in §§96.121, §§96.221, and §§96.321 (as applicable); and
      (ii) Submit in a timely manner any supplemental information that the permitting authority determines is necessary in order to review a CAIR permit application and issue or deny a CAIR permit.
   (2) The owners and operators of each CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) required to have a Title V operating permit and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) required to have a Title V operating permit at the source shall have a CAIR permit issued by the permitting authority under subpart CCC, CCC, and CCC (as applicable) of 40 CFR part 96 for the source and operate the source and the unit in compliance with such CAIR permit.
   (3) Except as provided in subpart II, III, and III (as applicable) of 40 CFR part 96, the owners and operators of a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) that is not otherwise required to have a Title V operating permit and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) that is not otherwise required to have a Title V operating permit are not required to submit a CAIR permit application, and to have a CAIR permit, under subpart CC, CCC, and CCCC (as applicable) of 40 CFR part 96 for such CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) and such CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable).
STEP 3, continued

(b) Monitoring, reporting, and recordkeeping requirements:

(1) The owners and operators, and the CAIR designated representative, of each CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) at the source shall comply with the monitoring, reporting, and recordkeeping requirements of subparts HH, HHH, and HHHH (as applicable) of 40 CFR part 96.

(2) The emissions measurements recorded and reported in accordance with subparts HH, HHH, and HHHH (as applicable) of 40 CFR part 96 shall be used to determine compliance by each CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) with the CAIR NOx emissions limitation, CAIR SO2 emissions limitation, and CAIR NOx Ozone Season emissions limitation (as applicable) under paragraph (c) of §96.106, §96.205, and §96.306 (as applicable).

(c) Nitrogen oxides emissions requirements.

(1) As of the allowance transfer deadline for a control period, the owners and operators of each CAIR NOx source and each CAIR NOx unit at the source shall hold, in the source's compliance account, CAIR NOx allowances available for compliance deductions for the control period under §96.154(a) in an amount not less than the tons of total nitrogen oxides emissions for the control period from all CAIR NOx units at the source, as determined in accordance with subpart HH of 40 CFR part 96.

(2) A CAIR NOx unit shall be subject to the requirements under paragraph (c)(1) of §96.106 for the control period starting on the later of January 1, 2009 or the deadline for meeting the unit's monitor certification requirements under §96.170(b)(1), (2), or (5) and for each control period thereafter.

(3) A CAIR NOx allowance shall not be deducted, for compliance with the requirements under paragraph (c)(1) of §96.106, for a control period in a calendar year before the year for which the CAIR NOx allowance was allocated.

(4) CAIR NOx allowances shall be held, deducted from, or transferred into or among CAIR NOx Allowance Tracking System accounts in accordance with subparts FF, GG, and II of 40 CFR part 96.

(5) A CAIR NOx allowance is a limited authorization to emit one ton of nitrogen oxides in accordance with the CAIR NOx Annual Trading Program. No provision of the CAIR NOx Annual Trading Program, the CAIR permit application, the CAIR permit, or an exemption under §96.105 and no provision of law shall be construed to limit the authority of the State or the United States to terminate or limit such authorization.

(6) A CAIR NOx allowance does not constitute a property right.

(7) Upon recordation by the Administrator under subpart EEEE, FFFF, GGGG, or HHHH of 40 CFR part 96, every allocation, transfer, or deduction of a CAIR NOx allowance to or from a CAIR NOx source's compliance account is incorporated automatically in any CAIR permit of the source that includes the CAIR NOx unit.

Sulfur dioxide emissions requirements.

(1) As of the allowance transfer deadline for a control period, the owners and operators of each CAIR SO2 source and each CAIR SO2 unit at the source shall hold, in the source's compliance account, a tonnage equivalent of CAIR SO2 allowances available for compliance deductions for the control period under §96.254(a) and (b) not less than the tons of total sulfur dioxide emissions for the control period from all CAIR SO2 units at the source, as determined in accordance with subpart FFF, GGGG, or III of 40 CFR part 96.

(2) A CAIR SO2 unit shall be subject to the requirements under paragraph (c)(1) of §96.206 for the control period starting on the later of January 1, 2010 or the deadline for meeting the unit's monitor certification requirements under §96.270(b)(1), (2), or (5) and for each control period thereafter.

(3) A CAIR SO2 allowance shall not be deducted, for compliance with the requirements under paragraph (c)(1) of §96.206, for a control period in a calendar year before the year for which the CAIR SO2 allowance was allocated.

(4) CAIR SO2 allowances shall be held, deducted from, or transferred into or among CAIR SO2 Allowance Tracking System accounts in accordance with subparts FF, GG, and II of 40 CFR part 96.

(5) A CAIR SO2 allowance is a limited authorization to emit one ton of sulfur dioxide in accordance with the CAIR SO2 Trading Program. No provision of the CAIR SO2 Trading Program, the CAIR permit application, the CAIR permit, or an exemption under §96.205 and no provision of law shall be construed to limit the authority of the State or the United States to terminate or limit such authorization.

(6) A CAIR SO2 allowance does not constitute a property right.

(7) Upon recordation by the Administrator under subpart EEEE, FFFF, GGGG, or III of 40 CFR part 96, every allocation, transfer, or deduction of a CAIR NOx Ozone Season allowance to or from a CAIR NOx Ozone Season source's compliance account is incorporated automatically in any CAIR permit of the source.
STEP 3, continued

(d) Excess emissions requirements.
If a CAIR NOx source emits nitrogen oxides during any control period in excess of the CAIR NOx emissions limitation, then:
(1) The owners and operators of the source and each CAIR NOx unit at the source shall surrender the CAIR NOx allowances required for deduction under §96.154(d)(1) and pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act or applicable State law; and
(2) Each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart, the Clean Air Act, and applicable State law.

If a CAIR SO2 source emits sulfur dioxide during any control period in excess of the CAIR SO2 emissions limitation, then:
(1) The owners and operators of the source and each CAIR SO2 unit at the source shall surrender the CAIR SO2 allowances required for deduction under §96.254(d)(1) and pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act or applicable State law; and
(2) Each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart, the Clean Air Act, and applicable State law.

If a CAIR NOx Ozone Season source emits nitrogen oxides during any control period in excess of the CAIR NOx Ozone Season emissions limitation, then:
(1) The owners and operators of the source and each CAIR NOx Ozone Season unit at the source shall surrender the CAIR NOx Ozone Season allowances required for deduction under §96.354(d)(1) and pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act or applicable State law; and
(2) Each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart, the Clean Air Act, and applicable State law.

(e) Recordkeeping and Reporting Requirements.
(1) Unless otherwise provided, the owners and operators of the CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) at the source shall keep on site at the source each of the following documents for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the permitting authority or the Administrator:
(i) The certificate of representation under §96.113, §96.213, and §96.313 (as applicable) for the CAIR designated representative for the source and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such documents are superseded because of the submission of a new certificate of representation under §96.113, §96.213, and §96.313 (as applicable) changing the CAIR designated representative.
(ii) All emissions monitoring information, in accordance with subparts HH, HHH, and HHHH (as applicable) of 40 CFR part 96, provided that to the extent that subparts HH, HHH, and HHHH (as applicable) of 40 CFR part 96 provide for a 3-year period for recordkeeping, the 3-year period shall apply.
(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable).
(iv) Copies of all documents used to complete a CAIR permit application and any other submission under the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable) to demonstrate compliance with the requirements of the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable).
(2) The CAIR designated representative of a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) and each CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) at the source shall submit the reports required under the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable) including those under subparts HH, HHH, and HHHH (as applicable) of 40 CFR part 96.

(f) Liability.
(1) Each CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) and each NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) shall meet the requirements of the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable).
(2) Any provision of the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable) that applies to a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) or the CAIR designated representative of a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) shall apply to the owners and operators of such source and of the CAIR NOx units, CAIR SO2 units, and CAIR NOx Ozone Season units (as applicable) at the source.
(3) Any provision of the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable) that applies to a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season unit (as applicable) or the CAIR designated representative of a CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) shall also apply to the owners and operators of such unit.
STEP 3, continued

(g) Effect on Other Authorities.
No provision of the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, and CAIR NOx Ozone Season Trading Program (as applicable), a CAIR permit application, a CAIR permit, or an exemption under § 96.105, §96.205, and §96.305 (as applicable) shall be construed as exempting or excluding the owners and operators, and the CAIR designated representative, of a CAIR NOx source, CAIR SO2 source, and CAIR NOx Ozone Season source (as applicable) or CAIR NOx unit, CAIR SO2 unit, and CAIR NOx Ozone Season unit (as applicable) from compliance with any other provision of the applicable, approved State implementation plan, a federally enforceable permit, or the Clean Air Act.

Certification

I am authorized to make this submission on behalf of the owners and operators of the source or units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.

Name  Daniel F. Cole
Signature  Daniel F. Cole  Date  June 28, 2007

$^{1}$Less than 11 tons per day of acceptable material combustion demonstrates compliance.

$^{2}$All conversion factors/calculations used to convert acceptable material throughput to amount (tons) shall be retained with this record.
STATEMENT OF BASIS

Permit Reference Documents
These documents were relied upon in the preparation of the operating permit. Because they are not incorporated by reference, they are not an official part of the operating permit.

1. Part 70 Operating Permit OP2011-020A, Issued May 9, 2011
2. Part 70 Minor Modification Application, Received December 16, 2011
5. FIRE
6. Construction Permit 0792-006, Issued July 6, 1992
7. Construction Permit 0992-016, Issued September 17, 1992
10. Temporary Construction Permit 122009-009, Issued December 17, 2009
11. No Construction Permit Required Determination, Issued April 20, 2011

Other Air Regulations Determined Not to Apply to the Operating Permit
The Air Pollution Control Program has determined the following requirements to not be applicable to this installation at this time for the reasons stated.

10 CSR 10-5.510 *Control of Emissions of NOx* is not applicable because the facility is subject to and in compliance with Phase II Acid Rain Requirements.

10 CSR 10-5.520 *Control of VOC Emissions From Existing Major Sources* is not applicable because the facility must already comply with one or more rules under Title 10, Division 10, Chapter 5 of the CSR that regulates VOC emissions.

10 CSR 10-5.570 *Control of Sulfur Emissions From Stationary Boilers* is not applicable because the facility is subject to and in compliance with Phase II Acid Rain Requirements.

10 CSR 10-6.350 *Emission Limitations and Emissions Trading of NOx* is not applicable to this facility. The facility is exempted under 10 CSR 10-6.350(1)(F) because the facility is subject to and implementing the requirements of 10 CSR 10-6.364 *Clean Air Interstate Rule Seasonal NOx Trading Program*.

10 CSR 10-6.360 *Control of NOx Emissions From Electric Generating Units and Non-Electric Generating Boilers* is not applicable to this facility. The facility is exempted under 10 CSR 10-6.360(1)(H) because the facility is subject to and implementing the requirements of 10 CSR 10-6.364 *Clean Air Interstate Rule Seasonal NOx Trading Program*.
10 CSR 10-6.400 *Restriction of Emission of PM From Industrial Processes* is not applicable to the installation at this time. The grinding, crushing, and conveying operations at power plants are exempted emission sources within this regulation.

**Construction Permits**

- **Construction Permit 0792-006, Issued July 6, 1992:**
  - This de minimis construction permit is for the installation of a dry vacuum and pressure fly ash handling system.
  - Special Condition 1 has been applied within this permit (see Permit Condition M5-001).

- **Construction Permit 0992-016, Issued September 17, 1992:**
  - This de minimis construction permit is for an SO₃ injection system.
  - Amendment A corrects the special conditions.
  - Amendment B amends the special conditions.
  - Special Conditions 1 – 2 and 20 – 21 have been applied within this permit (see Permit Condition (B-1 through B-4) – 008).
  - Special Condition 3 applies 10 CSR 10-6.405 to the boilers. 10 CSR 10-6.405 has already been applied within this permit (see Permit Condition (B-1 through B-4) – 003).
  - Special Conditions 4 and 19 apply 10 CSR 10-6.220 to the boilers. 10 CSR 10-6.220 has already been applied within this permit (see Permit Condition (B-1 through B-4) – 002).
  - Special Conditions 5 – 18 contain stack testing requirements. This stack testing has already been performed.
  - Special Condition 22 required reporting for exceedances of a 12-month rolling total; however, the construction permit contains no 12-month rolling total to exceed.

- **Construction Permit 0992-016A, Issued December 14, 1999:**
- **Construction Permit 0992-016B, Issued February 19, 2013**

- **Temporary Construction Permit 122009-009, Issued December 17, 2009:**
  - This temporary construction permit was to conduct an experimental flue gas conditioning project.
  - This permit expired June 1, 2010.

- **No Construction Permit Required Determination, Issued April 20, 2011:**
  - This no construction permit required determination is for the construction of a water submerged conveyor that will continuously remove bottom ash and boiler slag from B-4 Boiler 4 into a three-sided bunker. The MHDR of the conveyor is 7.68 tph.

- **Temporary Construction Permit 112012-011, Issued November 26, 2012:**
  - This temporary construction permit was to test three different technologies on Boiler 3: a coal additive, ADA-ES’s proprietary liquid Hg oxidation additive (DEN); injection of powdered activated carbon into the flue gas; and an alternative liquid flue gas conditioning agent, ADA’s proprietary ATI-2001.
  - This permit expired May 26, 2013.

- **Temporary Construction Permit 092013-006, Issued September 10, 2013:**
  - This temporary construction permit was to test two coal additives: M-Sorb and S-Sorb.
  - This permit expired October 15, 2013.
Temporary Construction Permit 092013-015, Issued September 20, 2013:
- This temporary construction permit was to test powdered activated carbon (PAC) injection on Boiler 3.
- This permit expired November 1, 2013.

**NSPS Applicability**

40 CFR Part 60, Subparts D - Standards of Performance for Fossil-Fuel-Fired Steam Generators; Da - Standards of Performance for Electric Utility Steam Generating Units; Db - Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units; and Dc - Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units are not applicable to the installation and have not been applied within this permit. NSPS D applies to fossil-fuel-fired steam generating units with a heat input rate greater than 250 MmBtu/hr constructed after August 17, 1971. [§60.40(a) and (c)] NSPS Da applies to steam generating units with a heat input rate greater than 250 MmBtu/hr constructed after September 18, 1978. [§60.40a(a)(2)] NSPS Db is only applicable to steam generating units with a heat input rate greater than 100 MmBtu/hr constructed after June 19, 1984. [§60.40b(a)] NSPS Dc is only applicable to steam generating units with a heat input rate greater than 10 MmBtu/hr constructed after June 9, 1989. [§60.40c(a)] All of the boilers at this facility were installed in 1966, and 1967 prior to the earliest compliance date listed within these rules of August 17, 1971.

40 CFR Part 60, Subpart E - Standards of Performance for Incinerators is not applicable to this facility. The facility has taken a voluntary limitation to combust less than 11 tons per day of municipal solid waste which is below the minimum threshold listed within the regulation of 50 tons per day municipal solid waste combusted.

40 CFR Part 60, Subparts K - Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After June 11, 1973, and Prior to May 19, 1978; Ka - Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After May 18, 1978, and Prior to July 23, 1984; and Kb - Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 are not applicable. The only storage vessel at this facility of an appropriate size (40,000 gallons plus) are the 3,382,751 gallon tank, TK-1, the 354,888 gallon Start-Up Fuel Oil Storage Tank, TK-24, and the 49,875 gallon tank, TK-26. TK-1 and TK-26 are currently empty and, therefore, not subject. TK-24 contains fuel oil which is exempt from these rules as it is not classified as a petroleum liquid: “petroleum, condensate, and any finished or intermediate products manufactured in a petroleum refinery but does not mean #2 through #6 fuel oils as specified in ASTM D396–78, 89, 90, 92, 96, or 98, gas turbine fuel oils #2–GT through #4–GT as specified in ASTM D2880–78 or 96, or diesel fuel oils #2–D and #4–D as specified in ASTM D975–78, 96, or 98a. (These three methods are incorporated by reference—see §60.17.)”

40 CFR Part 60, Subpart BBBB - Emission Guidelines and Compliance Times for Small Municipal Waste Combustion Units Constructed On or Before August 30, 1999 is not applicable to the facility at this time. The facility has chosen to take a voluntary limitation to combust less than 11 tons per day of municipal solid waste so as to meet the requirements of one of the exemptions within the regulation. The exemption requires:

1. **Small municipal waste combustion units** that combust less than 11 tons per day. Units are exempt from the State plan if four requirements are met: [§60.1555(a)]
a) The municipal waste combustion unit is subject to a federally enforceable permit limiting the amount of municipal solid waste combusted to less than 11 tons per day. [§60.1555(a)(1)]
   i) The permittee has taken a voluntary condition within this operating permit to combust less than 11 tons per day of municipal solid waste. The voluntary condition becomes federally enforceable upon issuance of this permit.
b) Notification is submitted by the owner or operator that the unit qualifies for the exemption. [§60.1555(a)(2)]
   i) The permittee shall submit this notification to the Air Pollution Control Program’s Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than three months after the issuance date of this operating permit.
c) The permittee submits a copy of the federally enforceable permit. [§60.1555(a)(3)]
   i) A copy of this operating permit is already on record with the Department. The permittee does not need to submit another copy.
d) The permittee keeps daily records of the amount of municipal solid waste combusted. [§60.1555(a)(4)]
   i) These records are required by the voluntary condition taken by the permittee. The records are to be kept using Attachment L or an equivalent form generated by the permittee.

40 CFR Part 60, Subpart IIII - Standards of Performance for Stationary Compression Ignition Internal Combustion Engines is not applicable because the Emergency Diesel Generators were installed in 1999, which is prior to the compliance date of July 11, 2005. The regulation is not applicable to the fire pumps because they were installed in 2004, which is prior to the compliance date.

MACT Applicability
40 CFR Part 63, Subpart ZZZZ - National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines is applicable to the installation. The regulation is not applicable to B-5 and B-6 Emergency Diesel Generators because they are existing compression ignition emergency stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions per §63.6590(b)(3). This regulation is applicable to IC-1 and IC-2 Emergency Fire Pumps and has been applied within this permit.

40 CFR Part 63, Subpart UUUUU – National Emission Standards for Hazardous Air Pollutants: Coal- and Oil-Fired Electric Utility Steam Generating Units is applicable to the installation and has been applied within this permit (see Permit Condition (B-1 through B-4) - 007). The standards applied within this operating permit are those promulgated February 16, 2012 as corrected April 19, 2012. If these standards should later be delayed, amended, or replaced, the permittee shall comply with the delayed, amended, or replacement standards. If the standards are rescinded the permittee shall no longer be required to comply with Permit Condition (B-1 through B-4) - 007. The permittee may apply for an extension allowing up to one additional year to comply with the standards of MACT UUUUU under §112(i)(3)(B) of the Clean Air Act.
National Emission Standards for Hazardous Air Pollutants Applicability
40 CFR Part 61, Subpart M – *National Emission Standards for Asbestos* is applicable to the installation and has been applied within this permit (see Section IV. Core Permit Requirements).

CAM Applicability
40 CFR Part 64 – *Compliance Assurance Monitoring*
CAM applies to each pollutant specific emission unit that:
- Is subject to an emission limitation or standard, and
- Uses a control device to achieve compliance, and
- Has pre-control emissions that exceed or are equivalent to the major source threshold.

CAM is applicable to Boilers 1, 2, 3, and 4 (see Permit Condition (B1 through B4) – 003).

CO₂e Emissions
This installation is a major source of CO₂e. Major stationary sources are required by the Clean Air Act to obtain Part 70 operating permits. While Part 70 permits generally do not establish new emissions limits, they consolidate applicable requirements, as defined in Missouri State Regulations 10 CSR 10-6.020(2)(A)23, into a comprehensive air permit. At the time of permit issuance, there were no applicable CO₂e requirements for this source.

Note that this source is subject to 40 CFR Part 98 - *Mandatory Greenhouse Gas Reporting Rule*. However, the preamble of 40 CFR Part 98 clarifies that 40 CFR Part 98 requirements do not have to be incorporated in Part 70 permits operating permits at this time. In addition, Missouri regulations do not require the installation to report CO₂e emissions in their Missouri Emissions Inventory Questionnaire. An estimate of CO₂e emissions have been included within the installation’s updated PTE (see the Other Regulatory Determinations section within this Statement of Basis). The applicant is required to report CO₂ emissions data directly to EPA starting with the 2010 calendar year.

The installation’s 2010 CO₂e emissions as reported to EPA were 17,365,002.71 tons. The installation’s 2011 CO₂e emissions as reported to EPA were 18,229,429.80 tons. Additional CO₂e information is available at: [http://epa.gov/climatechange/emissions/ghgdata/](http://epa.gov/climatechange/emissions/ghgdata/)

Other Regulatory Determinations
40 CFR Part 97 – *Cross-State Air Pollution Rule (CSAPR)*:
On August 21, 2012 The U.S. Court of Appeals for the D.C. Circuit vacated CSAPR. CAIR remains in place.

The permittee may not burn any material other than coal (and fuel oil #2 for start-up and flame stabilization) in B1 Boiler 1, B2 Boiler 2, B3 Boiler 3, and B4 Boiler 4 other than those listed within Section V Reasonably Anticipated Operating Scenarios without written consent from the Missouri Department of Natural Resources’ Air Pollution Control Program. The burning of county records is performed as a nonprofit public service and not for energy recovery practices.

If at any time the permittee should violate the voluntary limitation of combusting less than 11 tons per day of municipal solid waste the permittee shall become subject to all the requirements of NSPS BBBB.

¹This PTE is based upon 8,760 annual hours of uncontrolled operation unless otherwise stated. The emergency engines: IC-1, IC-2, IC-3, and IC-4 were evaluated at 500 annual hours of operation. The boilers: B1 through B4 were evaluated with a 98 percent ESP control efficiency for filterable PM and a 70 percent low NOₓ burner control efficiency. The fugitive emission sources: M-1 through M-4 were evaluated with a 50 percent BMPs control efficiency for PM. The Dry Fly Ash System M-5 was evaluated with a 99 percent baghouse control efficiency for PM.

²As defined within 10 CSR 10-6.110(2)(C)(1).

**Other Regulations Not Cited in the Operating Permit or the Above Statement of Basis**

Any regulation which is not specifically listed in either the Operating Permit or in the above Statement of Basis does not appear, based on this review, to be an applicable requirement for this installation for one or more of the following reasons:

1. The specific pollutant regulated by that rule is not emitted by the installation;
2. The installation is not in the source category regulated by that rule;
3. The installation is not in the county or specific area that is regulated under the authority of that rule;
4. The installation does not contain the type of emission unit which is regulated by that rule;
5. The rule is only for administrative purposes.
Should a later determination conclude that the installation is subject to one or more of the regulations cited in this Statement of Basis or other regulations which were not cited, the installation shall determine and demonstrate, to the Air Pollution Control Program's satisfaction, the installation's compliance with that regulation(s). If the installation is not in compliance with a regulation, which was not previously cited, the installation shall submit to the Air Pollution Control Program a schedule for achieving compliance for that regulation(s).

Re: Ameren Missouri Labadie Energy Center, 071-0003  
Permit Number: OP2011-020C

Dear Mr. Menne:

Enclosed with this letter is the Part 70 operating permit for the Labadie Plant. Please review this document carefully. Operation of your installation in accordance with the rules and regulations cited in this document is necessary for continued compliance. It is very important that you read and understand the requirements contained in your permit. Changes to your permit are listed on Page 4 under the installation description.

You may appeal this permit to the Administrative Hearing Commission (AHC), P.O. Box 1557, Jefferson City, MO 65102, as provided in RSMo §643.078.16 and §621.250.3. If you choose to appeal, you must file a petition with the AHC within 30 days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed. If it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the AHC.

If you have any questions or need additional information regarding this permit, please do not hesitate to contact Alana Rugen at the department’s Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102, or by telephone at (573) 751-4817. Thank you for your time and attention to this matter.

Sincerely,

AIR POLLUTION CONTROL PROGRAM

Michael J. Stansfield, P.E.
Operating Permit Unit Chief
