PERMIT BOOK

STATE OF MISSOURI

DEPARTMENT OF NATURAL RESOURCES

MISSOURI AIR CONSERVATION COMMISSION

PERMIT TO CONSTRUCT

Under the authority of RSMo 643 and the Federal Clean Air Act the applicant is authorized to construct the air contaminant source(s) described below, in accordance with the laws, rules and conditions as set forth herein.

Permit Number: 052010-013  Project Number: 2010-02-078
Installation ID: 161-0009

Parent Company: Asphalt Products, Inc.
Parent Company Address: P.O. Box 104747, Jefferson City, MO 65110
Installation Name: Asphalt Products, Inc.
Installation Address: 14060 County Road 210, Rolla, MO 65401
Location Information: Phelps County, S23, T38N, R8W

Application for Authority to Construct was made to change the status from a portable asphalt plant to a stationary asphalt plant. This review was conducted in accordance with Section (5), Missouri State Rule 10 CSR 10-6.060, Construction Permits Required.

☐ Standard Conditions (on reverse) are applicable to this permit.
☒ Standard Conditions (on reverse) and Special Conditions are applicable to this permit.

MAY 27 2010
EFFECTIVE DATE

DIRECTOR OR DESIGNEE
DEPARTMENT OF NATURAL RESOURCES
STANDARD CONDITIONS:

Permission to construct may be revoked if you fail to begin construction or modification within two years from the effective date of this permit. Permittee should notify the Air Pollution Control Program if construction or modification is not started within two years after the effective date of this permit, or if construction or modification is suspended for one year or more.

You will be in violation of 10 CSR 10-6.060 if you fail to adhere to the specifications and conditions listed in your application, this permit and the project review. In the event that there is a discrepancy between the permit application and this permit, the conditions of this permit shall take precedence. Specifically, all air contaminant control devises shall be operated and maintained as specified in the application, associated plans and specifications.

You must notify the Departments’ Air Pollution Control Program of the anticipated date of start up of this (these) air contaminant sources(s). The information must be made available within 30 days of actual startup. Also, you must notify the Department of Natural Resources Regional office responsible for the area within which you are located within 15 days after the actual start up of this (these) air contaminant source(s).

A copy of this permit and permit review shall be kept at the installation address and shall be made available to Department of Natural Resources’ personnel upon request.

You may appeal this permit or any of the listed Special Conditions to the Administrative Hearing Commission (AHC), P.O. Box 1557, Jefferson City, MO 65102, as provided in RSMo 643.075.6 and 621.250.3. If you choose to appeal, you must file a petition with the AHC within 30 days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed. If it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the AHC.

If you choose not to appeal, this certificate, the project review and your application and associated correspondence constitutes your permit to construct. The permit allows you to construct and operate your air contaminant sources(s), but in no way relieves you of your obligation to comply with all applicable provisions of the Missouri Air Conservation Law, regulations of the Missouri Department of Natural Resources and other applicable federal, state and local laws and ordinances.

The Air Pollution Control Program invites your questions regarding this air pollution permit. Please contact the Construction Permit Unit at (573) 751-4817. If you prefer to write, please address your correspondence to the Missouri Department of Natural Resources, Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102-0176, attention: Construction Permit Unit.
SPECIAL CONDITIONS:
The permittee is authorized to construct and operate subject to the following special conditions:

The Special Conditions listed in this permit were included based on the authority granted the Missouri Air Pollution Control Program by the Missouri Air Conservation Law (specifically 643.075) and by the Missouri Rules listed in Title 10, Division 10 of the Code of State Regulations (specifically 10 CSR 10-6.060). For specific details regarding conditions, see 10 CSR 10-6.060 paragraph (12)(A)10. “Conditions required by permitting authority.”

1. Superseding Condition
   A. The conditions of this permit supersede all special conditions found in the previously issued construction permit 0699-023 from the Air Pollution Control Program.

2. Emission Limitation - National Ambient Air Quality Standards (NAAQS)
   A. During concurrent same and/ or separate owner operations, Asphalt Productions, Inc. shall maintain a daily record of material processed to demonstrate that the daily impact on ambient air quality from the entire installation does not exceed the daily NAAQS of 150.0 µg/m³ for particulate matter less than ten microns in diameter (PM₁₀) at or beyond the property boundary.
   B. Attachment A, Attachment B or an equivalent form, such as an electronic form, approved by the Air Pollution Control Program shall be used to demonstrate compliance with Special Condition 2.A.

3. PM¹₀ Annual Emission Limit
   A. Asphalt Products, Inc. shall emit less than 15.0 tons of PM₁₀ in any 12-month period from the entire installation.
   B. Asphalt Products, Inc. shall demonstrate compliance with Special Condition 3.A using Attachment C or another equivalent form that has been approved by the Air Pollution Control Program, including an electronic form.

4. Sulfur Oxides (SOₓ) Annual Emission Limit
   A. Asphalt Products, Inc. shall emit less than 40.0 tons of SOₓ in any 12-month period from the entire installation.
   B. Asphalt Products, Inc. shall demonstrate compliance with Special Condition 4.A using Attachment D or another equivalent form that has been approved by the Air Pollution Control Program, including an electronic form.

5. Moisture Content Testing Requirement
   A. Asphalt Products, Inc. shall verify that the moisture content of the processes rock is greater than or equal to 1.5% weight.
SPECIAL CONDITIONS:
The permittee is authorized to construct and operate subject to the following special conditions:

B. Testing shall be conducted according to the method prescribed by the American Society for Testing Materials (ASTM) D-2216, C-566 or another method approved by the Director.

C. The initial test shall be conducted not later than 45 days after the start of operation. A second test shall be performed the calendar year following the initial test during the months of July or August.

D. The test samples shall be taken from rock that has been processed by the plant or from each source of aggregate (e.g. quarry).

E. The written analytical report shall include the raw data and moisture content of each sample, the test date and the original signature of the individual performing the test. The report shall be filed on-site or at the Asphalt Products, Inc. main office within 30 days of completion of the required test.

F. If the moisture content of either of the two tests is less than the moisture content in Special Condition 5.A, another test may be performed within 15 days of the noncompliant test. If the results of that test also exceed the limit, Asphalt Products, Inc. shall either:
   1.) Apply for a new permit to account for the revised information, or
   2.) Submit a plan for the installation of wet spray devices to the Air Pollution Control Program Compliance Assistance section within 10 days of the second noncompliant test. The wet spray devices shall be installed and operational within 40 days of the second noncompliant test.

G. In lieu of testing, Asphalt Products, Inc. may obtain test results that demonstrate compliance with the moisture content in Special Condition 5.A from the supplier of the aggregate.

6. Control Device Requirement-Baghouse

A. Asphalt Products, Inc. shall control emissions from the drum dryer (EP-2) using baghouses as specified in the permit application.

B. The baghouses shall be operated and maintained in accordance with the manufacturer’s specifications. The baghouse shall be equipped with a gauge or meter, which indicates the pressure drop across the control device. These gauges or meters shall be located such that the Department of Natural Resources employees may easily observe them.

C. Replacement filters for the baghouses shall be kept on hand at all times. The bags shall be made of fibers appropriate for operating conditions expected to occur (i.e. temperature limits, acidic and alkali resistance, and abrasion resistance).
SPECIAL CONDITIONS:
The permittee is authorized to construct and operate subject to the following special conditions:

D. Asphalt Products, Inc. shall monitor and record the operating pressure drop across the baghouses at least once every 24 hours. The operating pressure drop shall be maintained within the design conditions specified by the manufacturer’s performance warranty.

E. Asphalt Products, Inc. shall maintain an operating and maintenance log for the baghouses and drum filters which shall include the following:
   1.) Incidents of malfunction, with impact on emissions, duration of event, probable cause, and corrective actions; and
   2.) Maintenance activities, with inspection schedule, repair actions, and replacements, etc.

7. Minimum Distance to Property Boundary Requirement
   The primary emission point (Drum Dryer EP-2) shall be located at least 250 feet from the nearest property boundary.

8. Sulfur Content of Fuel Oil Limitation
   A. Asphalt Products, Inc. shall ensure that the sulfur content of the fuel fired in the drum dryer does not exceed 2.0 percent of the fuel weight.
   B. To demonstrate compliance, Asphalt Products, Inc. shall obtain the sulfur content of the fuel oil for each fuel oil delivery from the fuel vendors or conduct their own fuel analysis to evaluate the typical sulfur content weight percent of the fuel oil.

   Asphalt Products, Inc. shall control fugitive emissions from all of the haul roads and vehicular activity areas at this site by performing Best Management Practices as defined in Attachment AA.

10. Record Keeping Requirement
    Asphalt Products, Inc. shall maintain all records required by this permit for five years and make them available to any Missouri Department of Natural Resources personnel upon request.

11. Reporting Requirement
    Asphalt Products, Inc. shall report to the Air Pollution Control Program Enforcement Section P.O. Box 176, Jefferson City, MO 65102, no later than ten days after any exceedances of the limitations imposed by this permit.
Asphalt Products, Inc. Complete: February 24, 2010
14060 County Road 210
Rolla, MO 65401

Parent Company:
Asphalt Products, Inc.
P.O. Box 104747
Jefferson City, MO 65110

Phelps County, S23, T38N, R8W

PROJECT DESCRIPTION

This asphalt plant was originally a portable plant (PORT-0381) and previously permitted to operate with a stationary asphalt plant that has ceased operation at Asphalt Products, Inc.'s Rolla location. This asphalt plant will remain located in the city of Rolla, located in Phelps County, an attainment area for all criteria pollutants.

The maximum hourly design rate of the asphalt plant is 300 tons of hot mix asphalt per hour. Emissions from the drum dryer are controlled by a baghouse. The drum dryer burner may combust propane and fuel oil up to 2.0 % sulfur by weight and operates at 100 million British Thermal Units (BTU) per hour. This permit is based on burning recycled used motor oil by using #6 fuel with a 2.0 % sulfur content. The asphalt heater is fueled by #2 fuel oil and operates at 1 million BTU per hour. The plant is powered by electricity.

The applicant is using one of the methods described in Attachment AA, “Best Management Practices,” to control emissions from haul roads and vehicular activity areas. This installation is on the List of Named Installations found in 10 CSR 10-6.020(3)(B), Table 2 (#27). This stationary facility is subject to 40 CFR 60 Subpart I, "Standards of Performance for Hot Mix Asphalt Facilities" and is therefore regulated under Section 111 of the Clean Air Act prior to August 1980. The installation’s major source level is 250 tons per year and fugitive emissions are counted toward major source applicability.

OPERATING SCENARIOS

The plant is permitted to operate under the following four scenarios:

- **Solitary Operations**: Operation when Asphalt Products, Inc. (161-0009) is the only plant located at this site. The asphalt plant can operate for 24 hours without violating NAAQS. No record keeping is necessary to show compliance.

- **Concurrent (Same Owner) Operations**: Operation when ONLY other plants owned by Asphalt Products, Inc. (161-0009) are located at this site. The asphalt plant shall track its own daily ambient impact and also the daily impact of all other
plants at the installation to ensure that the combined daily PM\textsubscript{10} ambient impact from all plants at the site does not exceed 150.0 \(\mu g/m^3\). Attachment A, or equivalent form(s), shall be used for this purpose.

- Concurrent (Separate Owners) Operations: Operation when plants NOT owned by Asphalt Products, Inc. are located at this site. All plants owned by Asphalt Products, Inc. are permitted for a combined 42.30 \(\mu g/m^3\) of daily PM\textsubscript{10} ambient impact. Plants not owned by Asphalt Products, Inc. are permitted for a combined 87.70 \(\mu g/m^3\). Attachment B, or equivalent forms, shall be used for this purpose.

- Concurrent (Same and Separate Owners) Operations: Operation when plants owned by Asphalt Products, Inc. AND plants NOT owned by Asphalt Products, Inc. are located at this site. All plants owned by Asphalt Products, Inc. are permitted for a combined 42.30 \(\mu g/m^3\) of daily PM\textsubscript{10} ambient impact. Plants not owned by Asphalt Products, Inc. are permitted for a combined 87.70 \(\mu g/m^3\). The asphalt plant shall keep track of its own daily PM\textsubscript{10} ambient impact and the daily PM\textsubscript{10} ambient impact of all plants of the installation to ensure that the combined daily PM\textsubscript{10} ambient impact from these plants does not exceed the 150.0 \(\mu g/m^3\) NAAQS. Attachment B, or equivalent forms, shall be used for this purpose.

TABLES

The following permits have been issued to Asphalt Products, Inc. from the Air Pollution Control Program.

The table below summarizes the emissions of this project. The existing actual emissions were taken from the previous years EIQ. The potential emissions of the application represent the emissions of all equipment and activities assuming continuous operation (8760 hours per year). The conditioned potential emissions are based on a voluntary emission limit of 15.0 tons per year of PM\textsubscript{10} and 40.0 tons per year of SO\textsubscript{x} to avoid refined modeling requirements.

EMISSIONS CALCULATIONS

Emissions for the project were calculated using emission factors found in the United States Environmental Protection Agency (EPA) document AP-42 Compilation of Air Pollutant Emission Factors, Volume 1: Stationary Point and Area Sources, Fifth Edition (AP-42).

Emissions from the drum mix asphalt plant were calculated using emission factors from AP-42 Section 11.1 “Hot Mix Asphalt Plants,” April 2004. Sulfur oxide (SO$_x$) emissions were calculated using the SO$_2$ and SO$_3$ emission factors from AP-42 Section 1.3 “Fuel Oil Combustion,” September 1998 and assuming half of the sulfur up to 0.1 pound per ton of product is absorbed into the product. The asphalt plant is controlled by a baghouse, so the fabric filter controlled emission factor was used to calculate PM$_{10}$ emissions. Emissions from plant load-out were calculated using predictive equations found in AP-42 Table 11.1-14. Default values were used for asphalt volatility and mix temperature. Emissions from the asphalt heater were calculated using emission factors from AP-42 Section 1.3. Emissions from aggregate handling were calculated using emission factors from AP-42 Section 11.19.2 “Crushed Stone Processing and Pulverized Mineral Processing,” August 2004. The controlled emission factors were used because the inherent moisture content of the crushed rock is greater than 1.5%.

Emissions from haul roads and vehicular activity areas were calculated using the predictive equation from AP-42 Section 13.2.2 “Unpaved Roads,” November 2006. A 90% control
efficiency is applied to the emission calculations for the use of BMPs. Emissions from load-in and load-out of storage piles were calculated using the predictive equation from AP-42 Section 13.2.4. The moisture content of the aggregate is 1.5% weight. Emissions from wind erosion of storage piles were calculated using an equation found in the Air Pollution Control Program’s Emissions Inventory Questionnaire Form 2.8 “Storage Pile Worksheet.”

AMBIENT AIR QUALITY IMPACT ANALYSIS

An ambient air quality impact analysis (AAQIA) was performed to determine the impact of the pollutants listed in Table 3. The Air Pollution Control Program requires an AAQIA of PM$_{10}$ for all asphalt, concrete and rock-crushing plants regardless of the level of PM$_{10}$ emissions if a permit is required. An AAQIA is required for other pollutants if their emissions exceed their respective de minimis or screening model action level (SMAL). The AAQIA was performed using the Air Pollution Control Program’s generic nomographs and when appropriate the EPA modeling software SCREEN3. For each pollutant that was modeled, the maximum concentration that occurs at or beyond the site boundary was compared to the National Ambient Air Quality Standard (NAAQS) or Risk Assessment Level (RAL) for the pollutant. If during continuous operation the modeled concentration of a pollutant is greater than the applicable NAAQS or RAL, the plant’s production is limited to ensure compliance with the standard.

This plant uses BMPs to control emissions from haul roads and vehicular activity areas, so emissions from these sources were not included in the AAQIA. Instead they were addressed as a background concentration of 20.0 µg/m$^3$ of PM$_{10}$ in accordance with the Air Pollution Control Program’s BMPs interim policy.

PERMIT RULE APPLICABILITY

This review was conducted in accordance with Section (5) of Missouri State Rule 10 CSR 10-6.060, Construction Permits Required.

APPLICABLE REQUIREMENTS

Asphalt Products, Inc. shall comply with the following applicable requirements. The Missouri Air Conservation Laws and Regulations should be consulted for specific record keeping, monitoring, and reporting requirements. Compliance with these emission standards, based on information submitted in the application, has been verified at the time this application was approved. For a complete list of applicable requirements for your installation, please consult your operating permit.

GENERAL REQUIREMENTS

- Submission of Emission Data, Emission Fees and Process Information, 10 CSR 10-6.110. The emission fee is the amount established by the Missouri Air Conservation Commission annually under Missouri Air Law 643.079(1). Submission of an Emissions Inventory Questionnaire (EIQ) is required June 1 for the previous year's emissions.

- A Basic Operating Permit application is required for this installation within 30 days of equipment startup.
• *Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin*, 10 CSR 10-6.170

• *Restriction of Emission of Odors*, 10 CSR 10-3.090

**SPECIFIC REQUIREMENTS**

• *Restriction of Emission of Particulate Matter From Industrial Processes*, 10 CSR 10-6.400

• 40 CFR 60 Subpart I, "Standards of Performance for Hot Mix Asphalt Facilities" applies to the equipment.

• None of the National Emission Standards for Hazardous Air Pollutants (NESHAPS) or National Emission Standards for Hazardous Air Pollutants for Source Categories (MACTS) apply to the proposed equipment.

• *Restriction of Emission of Sulfur Compounds*, 10 CSR 10-6.260

**STAFF RECOMMENDATION**

On the basis of this review conducted in accordance with Section (5), Missouri State Rule 10 CSR 10-6.060, *Construction Permits Required*, I recommend this permit be granted with Special Conditions.

Daronn A. Williams  Date  
Environmental Engineer

**PERMIT DOCUMENTS**

The following documents are incorporated by reference into this permit:

• The Application for Authority to Construct form, dated February 4, 2010, received February 23, 2010, designating Asphalt Products, Inc. as the owner and operator of the installation.

• Southeast Regional Office Site Survey, dated March 3, 2010.

(a) Total SO\(_X\) Emissions Calculated for this Month in Tons:
(b) 12-Month SO\(_X\) Emissions Total from Previous Month's Attachment D in Tons:
(c) Monthly SO\(_X\) Emissions Total (b) from Previous Year's Attachment D in Tons:
(d) Current 12-month Total of SO\(_X\) Emissions in Tons: [(a) + (b) - (c)]

**Instructions:**
- **Column A:** List fuel type (#2 Fuel, #4 Fuel, #5 Fuel, Recycled Oil) combusted during each month for the drum dryer (EP-2)
- **Column B:** List the amount of fuel should per 1000 gallons (i.e. if 2,000 gal is used record this as “2.”)
- **Column C:** List sulfur content percentage by weight of the fuel. The percentage should be in whole numbers (i.e. if the sulfur content is 1.5%, record this as “1.5”)
- **Column D:** Source is AP-42, Table 1.3-1
- **Column E:** [Column B] x [Column C] x [Column D]

(a) Summation of [Column E] in Tons;  
(b) 12-Month SO\(_X\) emissions (e) from last month's Attachment D in Tons;  
(c) Monthly SO\(_X\) emissions total (b) from the previous year's Attachment D in Tons;  
(d) Calculate the new 12-month SO\(_X\) emissions total. A 12-Month SO\(_X\) emissions total of less than 40.0 tons indicates compliance.
Haul roads and vehicular activity areas shall be maintained in accordance with at least one of the following options when the portable plant is operating.

1. Pavement
   A. The operator shall pave the area with materials such as asphalt, concrete or other materials approved by the Air Pollution Control Program. The pavement will be applied in accordance with industry standards to achieve control of fugitive emissions while the plant is operating.
   B. Maintenance and repair of the road surface will be conducted as necessary to ensure that the physical integrity of the pavement is adequate to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator shall periodically wash or otherwise clean all of the paved portions of the haul roads as necessary to achieve control of fugitive emissions from these areas while the plant is operating.

2. Application of Chemical Dust Suppressants
   A. The operator shall apply a chemical dust suppressant (such as magnesium chloride, calcium chloride, lignosulfonates, etc.) to unpaved areas.
   B. The quantities of the chemical dust suppressant shall be applied and maintained in accordance with the manufacturer’s recommendation (if available) and in sufficient quantities to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator shall record the time, date and the amount of material applied for each application of the chemical dust suppressant agent on the above areas. The operator shall keep these records with the plant for not less than five (5) years and make these records available to Department of Natural Resources personnel upon request.

3. Application of Water-Documented Daily
   A. The operator shall apply water to unpaved areas. Water shall be applied at a rate of 100 gallons per day per 1,000 square feet of unpaved or untreated surface area while the plant is operating.
   B. Precipitation may be substituted for watering if the precipitation is greater than one quarter of one inch and is sufficient to control fugitive emissions.
   C. Watering may also be suspended when the ground is frozen, during periods of freezing conditions when watering would be inadvisable for traffic safety reasons, or when there will be no traffic on the roads.
   D. The operator shall record the date, volume of water application and total surface area of active haul roads or the amount of precipitation that day. The operator shall also record the rational for not watering (e.g. freezing conditions or not operating).
   E. The operator shall keep these records with the plant for not less than five (5) years, and the operator shall make these records available to Department of Natural Resources personnel upon request.

For purposes of this document, Control of Fugitive Emissions means to control particulate matter that is not collected by a capture system and visible emissions to the extent necessary to prevent violations of the air pollution law or regulation. (Note: control of visible emission is not the only factor to consider in protection of ambient air quality.)
Mr. Chris Yarnell

RE: New Source Review Permit - Project Number: 2010-02-078  

Dear Mr. Yarnell:  

Enclosed with this letter is your permit to construct. Please study it carefully. Also, note the Special Conditions on the accompanying pages. The document entitled, "Review of Application for Authority to Construct," is part of the permit and should be kept with this permit in your files. Operation in accordance with these conditions, your new source review permit application and with your operating permit is necessary for continued compliance. The reverse side of your permit certificate has important information concerning standard permit conditions and your rights and obligations under the laws and regulations of the State of Missouri.  

If you have any questions regarding this permit, please do not hesitate to contact Daronn A. Williams, at the Department’s Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102 or at (573) 751-4817. Thank you for your attention to this matter.  

Sincerely,  

AIR POLLUTION CONTROL PROGRAM  

Kendall B. Hale  
New Source Review Unit Chief
