STATE OF MISSOURI

DEPARTMENT OF NATURAL RESOURCES

MISSOURI AIR CONSERVATION COMMISSION

PERMIT TO CONSTRUCT

Under the authority of RSMo 643 and the Federal Clean Air Act the applicant is authorized to construct the air contaminant source(s) described below, in accordance with the laws, rules and conditions as set forth herein.

Permit Number: 052009-016
Project Number: 2006-11-078

Parent Company: Freedom Ready Mix
Parent Company Address: P.O. Box 4007, Waynesville, MO 65583
Installation Name: Freedom Ready Mix
Installation Address: 18502 Superior Road, Waynesville, MO 65583
Location Information: Pulaski County, S31, T36N, R11W

Application for Authority to Construct was made for:

The modification of an existing concrete plant to install cartridge filters instead of a baghouse to control particulate matter emissions. Concrete is produced through a truck mix process. The concrete plant has a maximum hourly design rate (MHDR) of 83.33 tons per hour (tpy). Best Management Practices will be used to control fugitive emissions from haul roads and storage piles. This review was conducted in accordance with Section (5), Missouri State Rule 10 CSR 10-6.060, Construction Permits Required.

☐ Standard Conditions (on reverse) are applicable to this permit.
✓ Standard Conditions (on reverse) and Special Conditions are applicable to this permit.

MAY 27 2009

DIRECTOR OR DESIGNEE
DEPARTMENT OF NATURAL RESOURCES

EFFECTIVE DATE
STANDARD CONDITIONS:

Permission to construct may be revoked if you fail to begin construction or modification within two years from the effective date of this permit. Permittee should notify the Air Pollution Control Program if construction or modification is not started within two years/18 months after the effective date of this permit, or if construction or modification is suspended for one year or more.

You will be in violation of 10 CSR 10-6.060 if you fail to adhere to the specifications and conditions listed in your application, this permit and the project review. In the event that there is a discrepancy between the permit application and this permit, the conditions of this permit shall take precedence. Specifically, all air contaminant control devises shall be operated and maintained as specified in the application, associated plans and specifications.

You must notify the departments’ Air Pollution Control Program of the anticipated date of start up of this (these) air contaminant sources(s). The information must be made available not more than 60 days but at least 30 days in advance of this date. Also, you must notify the Department of Natural Resources Regional office responsible for the area within which you are located within 15 days after the actual start up of this (these) air contaminant source(s).

A copy of this permit and permit review shall be kept at the installation address and shall be made available to Department of Natural Resources’ personnel upon request.

You may appeal this permit or any of the listed special conditions to the Administrative Hearing Commission (AHC), P.O. Box 1557, Jefferson City, MO 65102, as provided in RSMo 643.075.6 and 621.250.3. If you choose to appeal, you must file a petition with the AHC within 30 days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed. If it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the AHC.

If you choose not to appeal, this certificate, the project review and your application and associated correspondence constitutes your permit to construct. The permit allows you to construct and operate your air contaminant sources(s), but in no way relieves you of your obligation to comply with all applicable provisions of the Missouri Air Conservation Law, regulations of the Missouri Department of Natural Resources and other applicable federal, state and local laws and ordinances.

The Air Pollution Control Program invites your questions regarding this air pollution permit. Please contact the Construction Permit Unit at (573) 751-4817. If you prefer to write, please address your correspondence to the Missouri Department of Natural Resources, Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102-0176, attention: Construction Permit Unit.
SPECIAL CONDITIONS:
The permittee is authorized to construct and operate subject to the following special conditions:

The special conditions listed in this permit were included based on the authority granted the Missouri Air Pollution Control Program by the Missouri Air Conservation Law (specifically 643.075); by the Missouri Rules listed in Title 10, Division 10 of the Codes of State Regulations (specifically 10 CSR 10-6.060); by 10 CSR 10-6.010 paragraph (12)(A)10. “Conditions required by permitting authority”; by 10 CSR 10-6.010 “Ambient Air Quality Standards” and 10 CSR 10-6.060 subsections (5)(D) and (6)(A); and by control measures requested by the applicant, in their permit application, to reduce the amount of air pollutants being emitted, in accordance with 10 CSR 10-6.060 paragraph (6)(E)3.

1. Best Management Practices
   Freedom Ready Mix shall control fugitive emissions from all of the haul roads and stockpiles at this site by performing Best Management Practices, which include the usage of paving, chemical dust suppressants, or documented watering. These practices are defined in Attachment AA.

2. National Ambient Air Quality Standards (NAAQS) Limitation for Particulate Matter Less Than Ten Microns in Diameter (PM$_{10}$)
   A. The operator(s) for Freedom Ready Mix’s concrete plant (169-0038) shall ensure, while operating at this site, that the ambient impact of PM$_{10}$ at or beyond the nearest property boundary does not exceed 150 µg/m$^3$ in any 24-hour period, in accordance with the Federal NAAQS requirements (40 CFR 50.6).
   B. The concrete plant is permitted to operate under four (4) scenarios: Solitary, concurrent (same owner), concurrent (separate owner), and concurrent (same and separate owner) operations. The total daily ambient impact of PM$_{10}$ at this site shall include the combined impact of the concrete plant and any ambient background concentration from installations or equipment located on the same site as the concrete plant.
   C. To demonstrate compliance during concurrent (same owner) and concurrent (same and separate owner) operations, the operator(s) shall maintain a daily record of material processed.
      1. During solitary and concurrent (same owner) operations, use Attachment A, Daily Ambient PM$_{10}$ Impact Tracking Record, or other equivalent forms.
      2. During concurrent (separate owner) and concurrent (same and separate owner) operations, use Attachment B, Daily Ambient PM$_{10}$ Impact Tracking Record, or other equivalent forms.

3. Cartridge Filter Control System Requirements
   A. Freedom Ready Mix shall install and operate cartridge filters to restrict the emission of particulate matter. The cartridge filters must be used whenever these units are in operation. The cartridge filters shall be installed on the following units: Cement Unloading and Cement Supplement Unloading.
   B. The operator(s) shall conduct and document a quarterly inspection and maintenance of the cartridge filters for structural component failures, for leaks and wear, and for the cleaning sequence of the cartridge filters. Replacement filters shall be kept on hand at all times to replace defective filters (The filters shall be made of fibers appropriate for the operating conditions expected to occur). All inspections, corrective actions, and instrument calibrations shall be recorded.

4. Restriction on Minimum Distance to Nearest Property Boundary
   The primary emission point of the concrete plant, which is the mixer loading, shall be located at least 425 feet from the nearest property boundary whenever it is operating at this site.

5. Record Keeping Requirement
   The operator(s) shall maintain all records required by this permit for not less than five (5) years and shall make them available immediately to any Missouri Department of Natural Resources’ personnel upon request.

6. Reporting Requirement
   The operator(s) shall report to the Air Pollution Control Program (APCP) Enforcement Section, P.O. Box 176, Jefferson City, MO 65102, no later than ten (10) days after any exceedances of the limitations imposed by this permit.
SPECIAL CONDITIONS:
The permittee is authorized to construct and operate subject to the following special conditions:

7. Superseding Condition
   The conditions of this permit supersede all special conditions found in the previously issued construction permit(s) (022006-004) from the Air Pollution Control Program.
TECHNICAL REVIEW OF APPLICATION FOR AUTHORITY TO CONSTRUCT

INSTALLATION DESCRIPTION

There are currently three (3) stationary plants at the site: Freedom Ready Mix concrete plant (169-0038, 2006-11-078), Mid County Materials rock-crushing plant (169-0035, 2006-11-076), and Mid County Materials rock-washing plant (169-0035, 2006-11-077). The question is whether the plants should be considered parts of the same installation.

According to Missouri State Rules 10 CSR 10-6.020(2)(17), an installation is defined as

“All source operations include activities that result in fugitive emissions, that belong to the same industrial grouping (that have the same 2-digit code as described in the Standard Industrial Classification Manual, 1987), and any marine vessel while docked at the installation, located on one (1) or more contiguous or adjacent properties and under the control of the same person (or persons under common control).”

The deciding factors are the definition of what a “source” is and what is meant by “persons under common control.”

As explained in the Federal Register notice that redefined source (45 FR 52695):

“Each source is to be classified according to its primary activity, which is determined by its principal product or group of products produced or distributed, or services rendered. Thus, one source classification encompasses both primary and support facilities, even when the latter includes units with a different digit SIC Code.”

Since the SIC code for Freedom Ready Mix is different than the SIC codes for Mid County Materials plants, the issue is whether Mid County Materials rock-crushing plant and Mid County Materials rock-washing plant can be considered support facilities for the concrete plant. In accordance with EPA guidance on support facilities, a support facility is one that provides over 50% of its output to any primary activity. Currently, there is no written contract governing the amount of aggregates from Mid County Material plants that will be purchased by Freedom Ready Mix concrete plant. However, according to Mid County Materials, the rock-crushing plant has, in the past, provided 7% of its output to the concrete plant while the rock-washing plant has provided 33%. Based on these historical data, it is likely that these percentages will stay below 50%. Therefore, Freedom Ready Mix concrete plant and Mid County Materials plants should be considered different sources.

Furthermore, regarding the issue of “common control”, the EPA had determined that plants owned by separate owners can be considered to be under “common control” if a common factor, such as written sales contracts, governs how each plant is operated. There is currently only a verbal, not written, contract between Freedom Ready Mix and Mid County Materials. Freedom Ready Mix also has a history of buying aggregates from other quarries. If Mid County Materials plants cease operations, Freedom Ready Mix should be able to continue its operations. Therefore, the plants should not be considered to be under “common control.”

Since Freedom Ready Mix and Mid County Materials plants are considered separate sources and not under “common control”, they should be considered separate installations for permitting purposes.

PROJECT DESCRIPTION

In the construction permit previously issued to this plant (permit #022006-004), the plant was permitted to use a baghouse for PM$_{10}$ emissions control. However, cartridge filters were installed instead of a baghouse. A cartridge filter has a lower efficiency than a baghouse, and therefore, there should be an emissions increase based on this change. This permit modification allows the company to use cartridge filters instead of a baghouse to control PM$_{10}$ emissions.

The concrete plant is permitted to operate under four (4) operating scenarios

- Solitary Operations: This is operations when the concrete plant is at this site by itself.
- Concurrent (Same Owner) Operations: This operation is defined as operation when other plants owned by Freedom Ready Mix are located at the site.
• Concurrent (Separate Owner) Operations: This operation is defined as operation when other plants owned by other companies are located at the site.
• Concurrent (Same and Separate) Owners: This operation is defined as operation when plants owned by Freedom Ready Mix are located at the site at the same time as plants owned by other companies.

The plants located at this site must be asphalt, concrete, rock-crushing, rock-screening, or rock-washing plants.

Concrete is composed of water, cement, sand (fine aggregate), and non-metallic course aggregate rock. These materials are processed in mixer trucks. Processed concrete is delivered as sellable product. The emission points are listed in the attached spreadsheet summary. This installation is not on the List of Named Installations [10 CSR 10-6.020(3)(B), Table 2]. The installation is located in Pulaski County, an attainment area for all criteria air pollutants.

EMISSIONS EVALUATION

Criteria air pollutants will be emitted from this operation. The main air pollutant of concern is PM$_{10}$. The potential emissions were calculated from the maximum hourly design rate (MHDR) of the equipment, appropriate emission factors, control device efficiencies, and the limiting operating hours at MHDR. The sources of the emission factors and control efficiencies are listed in the section "Permit Documents". Based on the conditioned potential emissions, the operation is considered a de minimis source under 10 CSR 10-6.060 section (5).

The emission factors were taken from Environmental Protection Agency (EPA) document AP-42, *Compilation of Air Pollutant Emission Factors; Volume I, Stationary Point and Area Sources, Fifth Edition*. The emission factors were updated after the issuance of the previous permit (022006-004), so the values used in the current emissions evaluation are different than the values used in the previous permit evaluation. The changes in emission factors led to the decrease in the potential emissions of the installation even though the change to a cartridge filter should increase the PM$_{10}$ emissions because it has a lower control efficiency (95%) than a baghouse (99%).

Note: N/A = Not Applicable
* Existing potential emissions taken from permit # 022006-004
** Conditioned potential based on daily production limit from ambient impact analysis.
Screening tools were used to evaluate the ambient air impact of the hourly emissions from this operation. The ambient impact was evaluated at a distance of 425 feet to the nearest property boundary. The ambient impact at this site shall not exceed the National Ambient Air Quality Standard (NAAQS) of 150 µg/m³ of PM₁₀ at or beyond the nearest property boundary in any single 24-hour period. For sources agreeing to use Best Management Practices (BMPs), as defined in Attachment AA, haul roads and stockpiles are not modeled with screening tools. Instead, they are addressed as a background level of 20 µg/m³ of PM₁₀. To ensure conformity with NAAQS, the remaining process emissions are limited to an impact of less than 130 µg/m³ of PM₁₀ at or beyond the nearest property boundary.

The screening tools were used to develop an ambient impact factor for the concrete plant for each operating scenario. The ambient impact factors needed to ensure compliance is included in record keeping tables, Attachment A and B.

During solitary and concurrent (same owner) operations, the installation shall track the daily PM₁₀ ambient impact of all plants at this site to ensure compliance with NAAQS. Attachment A, or equivalent forms, shall be used for this purpose. During concurrent (separate owner) and concurrent (same and separate owner) operations, plants owned by Freedom Ready Mix are permitted for 86.40 µg/m³ of PM₁₀ while plants owned by other companies are permitted for 43.60 µg/m³ of PM₁₀. The stationary concrete plant shall track the daily PM₁₀ ambient impact of all plants owned by Freedom Ready Mix to ensure that the combined daily PM₁₀ ambient impact of these plants does not exceed 86.40 µg/m³. Attachment B, or equivalent forms, shall be used for this purpose.

When Mid County Materials rock-crushing plant (169-0035, 2006-11-076), Mid County Materials rock-washing plant (169-0035, 2006-11-077) and the Freedom Ready Mix concrete plant (169-0038) are the only plants located at this site, the installation shall operate under concurrent (separate owner) operations where Freedom Ready Mix concrete plant shall track its daily PM₁₀ ambient impact to ensure that it is less than 86.40 µg/m³. The combined ambient impact for the Mid County Materials plants has already been limited in their permits to 43.60 µg/m³.

</tbody>
</table>

* Background PM₁₀ level of 20.00 µg/m³ from haul roads and stockpiles and 43.60 µg/m³ from the operation of asphalt, concrete, or rock-crushing plants owned by other companies.

**The operator(s) must balance production among concurrently operating plants, with the ambient impact factors for each, such that NAAQS is not exceeded. Ambient impact from other plants owned by Freedom Ready Mix can be obtained from the operators of these plants.

**APPLICABLE REQUIREMENTS**

The owner is subject to compliance with the following applicable requirements. The Missouri Air Conservation Laws and Regulations should be consulted for specific record keeping, monitoring, and reporting requirements.

- **Submission of Emission Data, Emission Fees and Process Information**, 10 CSR 10-6.110
- **Operating Permits**, 10 CSR 10-6.065
- No Operating Permit is required for this concrete plant.
- **Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin**, 10 CSR 10-6.170
- **Restriction of Emission of Visible Air Contaminants**, 10 CSR 10-6.220
- **Restriction of Emission of Odors**, 10 CSR 10-3.090
- **Restriction of Emission of Particulate Matter From Industrial Processes**, 10 CSR 10-6.400
- **Restriction of Emission of Sulfur Compounds**, 10 CSR 10-6.260
- None of the New Source Performance Standards (NSPS) apply to the proposed equipment.
- The National Emission Standards for Hazardous Air Pollutants (NESHAPs) and the currently promulgated Maximum Achievable Control Technology (MACT) regulations do not apply to the proposed equipment.
STAFF RECOMMENDATION

On the basis of this review conducted in accordance with Section (5), Missouri State Rule 10 CSR 10-6.060, *Construction Permits Required*, I recommend this permit be granted with special conditions.

Chia-Wei Young
Environmental Engineer

PERMIT DOCUMENTS

The following documents are incorporated by reference into this permit:

- The Application for Authority to Construct form, designating Freedom ready Mix as the owner and operator of the installation.
- Environmental Protection Agency (EPA) AP-42, *Compilation of Air Pollutant Emission Factors; Volume I, Stationary Point and Area Sources, Fifth Edition*.
- Spreadsheet calculations of potential-to-emit and ambient impact.
- Southeast Regional Office Site Survey.
- Best Management Practices.

Construction Industry Sites covered by the Interim Relief Policy shall maintain Best Management Control Practices (BMPs) for fugitive emission areas at their installations when in operation. Options for BMPs are at least one of the following:

**For Haul Roads:**

1. **Pavement of Road Surfaces** –
   A. The operator(s) may pave all or any portion of the haul roads with materials such as asphalt, concrete, and/or other material(s) after receiving approval from the program. The pavement will be applied in accordance with industry standards for such pavement so as to achieve “Control of Fugitive Emissions”\(^1\) while the plant is operating.
   B. Maintenance and/or repair of the road surface will be conducted as necessary to ensure that the physical integrity of the pavement is adequate to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator(s) shall periodically water, wash and/or otherwise clean all of the paved portions of the haul road(s) as necessary to achieve control of fugitive emissions from these areas while the plant is operating.

2. **Usage of Chemical Dust Suppressants** –
   A. The operator(s) shall apply a chemical dust suppressant (such as magnesium chloride, calcium chloride, lignosulfonates, etc.) to all the unpaved portions of the haul roads. The suppressant will be applied in accordance with the manufacturer’s suggested application rate (if available) and re-applied as necessary to achieve control of fugitive emissions from these areas while the plant is operating.
   B. The quantities of the chemical dust suppressant shall be applied, re-applied and/or maintained sufficient to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator(s) shall record the time, date and the amount of material applied for each application of the chemical dust suppressant agent on the above areas. The operator(s) shall keep these records with the plant for not less than five (5) years, and the operator(s) shall make these records available to Department of Natural Resources personnel upon request.

3. **Usage of Documented Watering** –
   A. The operator(s) shall control the fugitive emissions from all the unpaved portions of the haul roads at the installation by consistently and correctly using the application of a water spray. Documented watering will be applied in accordance with a recommended application rate of 100 gallons per day per 1,000 square feet of unpaved/untreated surface area of haul roads as necessary to achieve control of fugitive emissions from these areas while the plant is operating. For example, the operator(s) shall calculate the total square feet of unpaved vehicle activity area requiring control on any particular day, divide that product by 1,000, and multiply the quotient by 100 gallons for that day.
   B. The operator(s) shall maintain a log that documents daily water applications. This log shall include, but is not limited to, date and volumes (e.g., number of tanker applications and/or total gallons used) of water application. The log shall also record rationale for not applying water on day(s) the plant is in operation (e.g., meteorological situations, precipitation events, freezing, etc.)
   C. Meteorological precipitation of any kind, (e.g. a quarter inch or more rainfall, sleet, snow, and/or freeze thaw conditions) which is sufficient in the amount or condition to achieve control of fugitive emissions from these areas while the plant is operating.
   D. Watering may also be suspended when the ground is frozen, during periods of freezing conditions when watering would be inadvisable for traffic safety reasons, or when there will be no traffic on the roads. The operator(s) shall record a brief description of such events in the same log as the documented watering.
   E. The operator(s) shall record the date and the amount of water applied for each application on the above areas. The operator(s) shall keep these records with the plant for not less than five (5) years, and the operator(s) shall make these records available to Department of Natural Resources personnel upon request.

\(^1\) For purposes of this document, Control of Fugitive Emissions means to control particulate matter that is not collected by a capture system and visible emissions to the extent necessary to prevent violations of the air pollution law or regulation. (Note: control of visible emission is not the only factor to consider in protection of ambient air quality.)
For Vehicle Activity Areas around Open Storage Piles:

1. **Pavement of Stockpile Vehicle Activity Surfaces** –
   A. The operator(s) may pave all or any portion of the vehicle activity areas around the storage piles with materials such as asphalt, concrete, and/or other material(s) after receiving approval from the program. The pavement will be applied in accordance with industry standards for such pavement so as to achieve control of fugitive emissions while the plant is operating.
   B. Maintenance and/or repair of the road surface will be conducted as necessary to ensure that the physical integrity of the pavement is adequate to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator(s) shall periodically water, wash and/or otherwise clean all of the paved portions of the vehicle activity areas around the storage piles as necessary to achieve control of fugitive emissions from these areas while the plant is operating.

2. **Usage of Chemical Dust Suppressants** –
   A. The operator(s) shall apply a chemical dust suppressant (such as magnesium chloride, calcium chloride, lignosulfonates, etc.) to all the vehicle activity areas around the open storage piles. The suppressant will be applied in accordance with the manufacturer’s suggested application rate (if available) and re-applied as necessary to achieve control of fugitive emissions from these areas while the plant is operating.
   B. The quantities of the chemical dust suppressant shall be applied, re-applied and/or maintained sufficient to achieve control of fugitive emissions from these areas while the plant is operating.
   C. The operator(s) shall record the time, date and the amount of material applied for each application of the chemical dust suppressant agent on the above areas. The operator(s) shall keep these records with the plant for not less than five (5) years, and the operator(s) shall make these records available to Department of Natural Resources personnel upon request.

3. **Usage of Documented Watering** –
   A. The operator(s) shall control the fugitive emissions from all the vehicle activity areas around the storage piles at the installation by consistently and correctly using the application of a water spray. Documented watering will be applied in accordance with a recommended application rate of 100 gallons per day per 1,000 square feet of unpaved/untreated surface area of vehicle activity areas around the storage piles as necessary to achieve control of fugitive emissions from these areas while the plant is operating. (Refer to example for documented watering of haul roads.)
   B. The operator(s) shall maintain a log that documents daily water applications. This log shall include, but is not limited to, date and volumes (e.g., number of tanker applications and/or total gallons used) of water application. The log shall also record rationale for not applying water on day(s) the plant is in operations (e.g., meteorological situations, precipitation events, freezing, etc.)
   C. Meteorological precipitation of any kind, (e.g. a quarter inch or more rainfall, sleet, snow, and/or freeze thaw conditions) which is sufficient in the amount or condition to achieve control of fugitive emissions from these areas while the plant is operating.
   D. Watering may also be suspended when the ground is frozen, during periods of freezing conditions when watering would be inadvisable for traffic safety reasons, or when there will be no traffic on the roads. The operator(s) shall record a brief description of such events in the same log as the documented watering.
   E. The operator(s) shall record the date and the amount of water applied for each application on the above areas. The operator(s) shall keep these records with the plant for not less than five (5) years, and the operator(s) shall make these records available to Department of Natural Resources personnel upon request.

RE: New Source Review Permit - Project Number: 2006-11-078

Dear Mr. Morgans:

Enclosed with this letter is your New Source Review permit. Please review your permit carefully and note the special conditions, if any, and the requirements in your permit.

Operation in accordance with the conditions and requirements in your permit is necessary for continued compliance. Operation in accordance with information submitted for the New Source Review Permit Application (Project #2006-11-078) is also required. The section of the permit entitled “Technical Review of Application for Authority to Construct” should not be separated from the main portion of your permit. The entire permit must be retained in your files. The reverse side of your permit certificate has important information concerning standard permit conditions and your rights and obligations under the laws and regulations of the State of Missouri.

If you have any questions regarding this permit, please do not hesitate to contact me at (573) 751-4817, or you may write to the Departments’ Air Pollution Control Program, P.O. Box 176, Jefferson City, MO 65102. Thank you for your attention to this matter.

Sincerely,

AIR POLLUTION CONTROL PROGRAM

Kendall B. Hale, P.E.
New Source Review Unit Chief
