The attached map shows the composter moved south and distances measured accordingly.
Thanks

I need a measurement from the composter north to the same drainage that you measured to from the building (the 106' line). If the distance is less than 100' the composter will need to be moved south to meet the setback. The second measurement from the composter can be removed from the map if you want to (the 612' line).

Greg,

Attached is a site map with additional measurements. If I didn't interpret your notes correctly let me know. I am not sure if that bit to the north is actually a drainage, the aeriels aren't definitive and you can see on Google Earth someone has left tracks where they turned around in it with a vehicle.

Thanks

John,

The contractor statement is good but I would like measurements from the building/composter to the drainages directly to the north and to the east of the site. See sticky notes on the attached map. Regulations state “100’ to gaining streams (classified or unclassified; perennial or intermittent)”.

Thanks,

Greg Caldwell

Greg,

Attached are documents you requested for the Calloway Farrowing, LLC, permit application. Please find the following:

- 1 – Site placement map with distances to water sources and roads. The project manager told me there is no well on site but the site owner intends to drill a well that will be 300 feet from all structures.
- 2 – A statement from the contractor in charge of excavation stating the procedure they will use to drain and fill ponds on the property.

If you need anything else please let me know.

Thanks
