

11.10 Protocol for Handling Incomplete Wastewater Collection and Treatment System Construction Permit Applications

Applicability:

This relates to the process the Department when an incomplete construction permit application is received.

Content:

The department has developed the Wastewater Engineering Construction Permitting Manual for Facilities with a Design Flow of 22,500 or Greater, which can be found on the web at <http://dnr.mo.gov/pubs/pub2445.pdf>. The construction permit manual is a tool designed to guide department review engineers and the public through the process of wastewater system construction project review. Refer to the Wastewater Engineering Construction Permitting Manual for information regarding the process the department follows when an incomplete construction permit application is received.

For questions regarding the wastewater system construction permit review process, contact the department at 1-800-361-4827 or visit the Wastewater Construction Permitting webpage at <http://dnr.mo.gov/env/wpp/permits/ww-construction-permitting.htm> for more information.
