

## 7.1.1 Special Conditions/General Special Conditions/Seven Basic Special Conditions

### **Applicability:**

This topic addresses the use of a group of seven basic or commonly used special conditions generally included in site-specific State Operating Permits, in particular permits for facilities treating domestic wastewater.

### **Content:**

The group of seven basic special conditions (a.k.a. the "Simple Seven") is typically used in permits for publicly owned treatment works (POTWs) and private domestic wastewater treatment plants. The seven special conditions address:

1. Reopening and modifying the permit to incorporate new effluent limitations to reflect results of waste load allocations, toxicity studies, 303(d) studies and TMDLs;
2. Marking outfalls in the field;
3. Connection to area-wide treatment systems;
4. Changes in discharge of toxic substances;
5. Reporting as no-discharge when this occurs;
6. Fully complying with the Water Quality Standards, including the General Criteria; and
7. Sludge and biosolids use for domestic wastewater facilities.
