Comments: (Please record any additional comments here.)

Photo ID# 65 shows disturbance of both banks and substrate of the channel. Tire tracks are visible. It looks like gravel was collected from the creek channel to build both left and right banks and the ground has been seeded with grass. This was possibly done because of recent flood damage (surveyor’s observation only).

Notes: Transects will be measured beginning on left descending bank (0 depth) and finishing on right descending bank (0 depth). This width is the wetted width

GPS locations corresponds to Transect 01 and 11. Transects ordered in upstream to downstream order.

Depth measurements taken at 10 equally spaced locations along transect (determine by dividing wetted width by ten)

Mark dry depth measurements as 0; record actual measurements to 0.1 meter unless depth is too deep to measure (then record as > 1)

All measurements to be taken to the nearest 0.01 meter.
