TYPE OF MINE PLAN (CHECK ONE)  
 Short Term – for one permit year       Long Term – for period through date 05/29/2111

DESCRIPTION OF SITE PRIOR TO LAND RECLAMATION COMMISSION PERMITTING (BY APPLICANT OR PRIOR OPERATOR), INCLUDING SOIL, VEGETATION AND TOPOGRAPHY.  
 This mine plan application pertains to an area of approximately 76 acres in size that includes an area of 20 acres that will be bonded. Both areas are shown on Detail Map #1. The mine plan area is slightly sloped and is about 10% wooded and 90% has been farmed for many years. The soil is classified as menfro silt loam and measures about 10 inches in depth. This area is bordered by private property on three sides and by my property on the west side. State highway 61 is about 1,400 feet to the west and access can be made by crossing my property. Also, this area makes contact with county road 601 at one point on the east side. Due to the size of this property and the unknown sales volume, a 100 year long-term mine plan will allow us adequate time to mine this area.

**A. TOPSOIL**

AVERAGE DEPTH OF TOPSOIL, PRIOR TO LAND RECLAMATION COMMISSION PERMITTING 10 inches	IS TOPSOIL TO BE SOLD OR DISCARDED OFF-SITE? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
--	---

DESCRIBE METHODS AND EQUIPMENT USED FOR TOPSOIL REMOVAL  
 After trees are cleared with bulldozers, the top 10 to 12 inches of soil will be removed with bulldozers, loaders, and scrapers. Topsoil will be removed during the summer months for areas that are to be mined the following year. Topsoil removal will be kept at least 20 feet ahead of pit excavation. Because there is going to be a 55 acre water impoundment, approximately 55 acres of topsoil will be removed off-site and sold. An adequate amount of soil will be retained on-site, and kept on a bonded area to satisfy topsoil replacement requirements.

DESCRIBE METHODS AND EQUIPMENT USED FOR TOPSOIL STORAGE AND PROTECTION  
 The loaders and scrapers will deposit the soil in long stockpiles along the north and east edges of the bonded area (see Detail Map #1). These stockpiles will be graded to a maximum slope of 33%, shaped and seeded (with pasture seed mix #2 on page three of this mine plan) on a permitted and bonded area to protect the piles from erosion.

**B. SPOIL**

DESCRIBE METHODS AND LOCATION OF SPOIL PLACEMENT AND DISPOSAL

The intent of this operation is to operate a "high-wall" quarry. That will result in an excavation with a flat floor below the existing water table. When mining is completed this mine area will become a lake. Therefore spoil could only be used to landscape around the perimeter of the pit. Needed spoil will be stockpiled for later use and will be shaped and seeded (with seed mix # 2 on page three of this mine plan) on a permitted and bonded area to protect the pile from erosion. The unneeded spoil will be removed off-site and sold.

**C. ACID MATERIALS**

DESCRIBE METHODS AND EQUIPMENT USED FOR HANDLING ACID MATERIALS (IF NONE IS ANTICIPATED, WRITE "NONE" BELOW)

None Anticipated.

**D. PIT INFORMATION (GIVE ALL DIMENSIONS IN FEET)**

DESCRIBE LOCATION AND ORIENTATION OF PIT, IF NOT CLEAR ON SITE MAPS

See Detail Map # 1 for locations.  
After the overburden has been removed, the first excavation will be in the west corner of the bonded area. From that point the pit will advance towards the east. The pit will have a "high-wall" and there will be a protective fence along the property line. Also, there will be a ridge maintained between the "high-wall" and the fence. No excavations will occur within the waterline easement along the North and East property line. There will be no excavation within 75 feet of a public road or 50 feet of a property line.

**B. GRADING**

DESCRIBE PROPOSED RECLAIMED TOPOGRAPHY, INCLUDING SLOPES

All spoil areas will be graded to slopes traversable by farm machinery.  
The intent of this operation is to operate a "high-wall" mine and create a lake in the floor. The upper rim will have a minimum 12 inch depth of soil replacement and seeded with revegetation mix number #1.  
Final pit will be allowed to fill with water and could be a recreation lake stocked with fish.

**C. DESCRIBE THE GENERAL SEQUENCE AND TIMING OF THE FOLLOWING ACTIVITES**

GRADING

Grading will be done as the pit advances. Final grading will be done within one year of mining completion date. The final graded slopes will not exceed a 3:1 ratio.

REPLACEMENT OF TOPSOIL

Topsoil will be replaced to a uniform depth of 12 inches, and disc to reduce compaction. Topsoil will be replace within one year of mining completion date. The final graded slopes will not exceed a 3:1 ratio

REVEGETATION

Prior to seeding, a soil test will be conducted in order to determine appropriate lime and fertilizer application requirements. All topsoil areas will be seeded during the first optimum seeding period following topsoil replacement.
