

Missouri Major Water Users Well Information for Surface Water Users

This report includes information about groundwater sources. The data on this report corresponds to the "Surface Water" form.

Instructions

On the menu bar, click Edit, and select Find. Type the identifier number or country name and press enter.

This is not a complete data set of major water users for Missouri. Many major water users do not register their water use, and many registered major water users do not report annually as required.

In an effort to increase the number of major water users, the Water Resources Center (WRC) compared the Major Water Users database to the database of public water suppliers and the database of surface water intakes. The following is a key to the 2005 year field in the report.

PW05: New public water supplies added from the Public Drinking Water Database

WW05: New water wells added from Wellhead Protection Program database of certified wells

2005: Annual water use data has been submitted as required

NO05: A report has not been submitted

*05: Forms have been requested from the WRC, but no data has been submitted to WRC

Names of major water users are available upon special request.

Questions or comments about this report can be sent to:

Major Water Users Coordinator
