Note from the Branch Chief

The Public Drinking Water Branch of the Missouri Department of Natural Resources has an important mission to ensure safe drinking water to every visitor and resident of Missouri by regulating public water systems. The purpose of this report is to let readers know how water systems in Missouri are performing. The report is the tenth Annual Compliance Report and covers calendar year 2005. The branch is providing the report to the U.S. Environmental Protection Agency (EPA) for inclusion in a national report summarizing the performance of the nation's drinking water supplies.

In 1974, Congress passed the Safe Drinking Water Act, the first national legislation regulating drinking water. Under this law, states may seek primacy, or approval from EPA to administer a Public Water System Supervision Program. To receive primacy, states must meet certain requirements laid out in the Safe Drinking Water Act, including adoption of drinking water regulations at least as stringent as federal regulations and demonstration that the state can enforce the requirements. EPA granted primacy to the State of Missouri in 1979.

The branch developed this report not only to comply with statutory obligations mandated by the Safe Drinking Water Act, but also to focus attention and provide an understanding of the importance of quality drinking water.

A handwritten signature in black ink, appearing to read "Steve Sturgess", written over a light-colored, slightly textured background.

Steve Sturgess, Chief
Public Drinking Water Branch
Missouri Department of Natural Resources

The Missouri Public Water System Universe in 2005

A Public Water System (PWS) is defined as a system that provides water through piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. Water testing at systems serving fewer people than this is facilitated by local and county sanitarians and the Missouri Department of Health and Human Services, rather than the Department of Natural Resources.

There are three types of PWSs: community, non-transient non-community and transient non-community. Examples of community systems include towns, water districts, subdivisions, mobile home parks and residential facilities such as nursing homes or prisons. Non-transient non-community systems serve the same people every day, at least six months out of the year, but not in a residential setting; schools and factories are good examples. Transient non-community systems serve different people daily, such as restaurants, resorts and rest stops. These smaller systems are typically in rural areas

where it is not feasible to hook up to a city or water district. The requirements for construction, operation, monitoring, etc., vary among systems based on their type, size, and source of water

state's major population centers make the use of the big rivers as a source so popular. Groundwater is the next most used source of drinking water for Missouri's community supplies. This is especially

Source of Water (Percent Population Served)

In 2005 there were 2,741 active PWSs in Missouri. Of this total, 1,471 were community, 242 were non-transient non-community and 1,028 were transient non-community systems.

The community water systems in Missouri served over 5 million citizens in 2005. These citizens benefit from one of Missouri's most outstanding resources: its water. There is generally a large quantity of good quality water in Missouri. By far the largest source of drinking water for Missourians is surface water from the Missouri and Mississippi rivers. The abundant supply of water in these rivers and the proximity to the

true in southern Missouri where good quality groundwater is easy to obtain and requires very little treatment to be used for drinking water. Some groundwater systems have the best of both worlds and use alluvial wells in valleys of the Missouri and Mississippi river system where they can get large volumes of water free of surface contaminants. Historically, more people used to get their drinking water from the Mississippi River than they do now. Several intakes on the Mississippi River are no longer in use.

Analysis of Compliance by Public Water Systems in 2005

We expect a lot from our public water systems and require testing for more than 90 different regulated chemicals and microbiological contaminants during the year. A system is to be applauded for performing all required testing and meeting all maximum contaminant level (MCL) standards. When MCL violations do occur, that often is the first identification of a problem and can be the first step toward correcting it. Many public water systems perform testing beyond that required by the state.

2005 Public Water System by Type

The Summary of Violations tables are counts of individual violations. Appendices A through D list specific systems in order of their county of location. Because there are multiple regulations involved and some monitoring is on a monthly schedule, each PWS has the potential to accumulate multiple violations during the year.

For example, the monitoring requirements for the Total Coliform Rule alone create a potential for more than 32,000 violations. This puts some perspective on the violation figures shown in the tables. Another factor is the number of systems that have violations. Many of the violations are from water systems with problems that result in multiple violations during the year, while other systems may only have one or two violations. The department uses various methods to focus on the water systems that need attention.

The Missouri Department of Natural Resources and the U.S. Environmental Protection Agency (EPA) use a process called Significant Non-Compliers (SNCs) to focus attention on the water systems with problems that are considered significant. These are the systems with serious violations that potentially affect public health or with multiple monitoring violations. Appendix D gives the list of

Percent Population of Community Water Systems meeting Health-based Standards

Significant Non-Compliers. Some of the systems listed, however, may have already resolved these problems.

During 2005 there were 143 systems on the SNC list. That means that 2,598 of the 2,741 PWSs in Missouri were not significant violators. Those systems listed typically serve a small population.

Maximum contaminant level and treatment technique violations represent the most significant impact on the public health. These occurred at a small number of public water systems serving less than 8 percent of the population.

Ninety-four percent of the population served by community water systems in 2005 received water that met all of the health-based

standards. EPA's national target for 2008 is 95 percent. Since 1996, when the first Annual Compliance Report was produced, through 2003 the results for Missouri have been consistently at or above this target, though they may vary slightly from year to year. The small dip below the 95 percent target does not represent a reduction in water quality, but is a result of more stringent drinking water standards.

The majority of MCL and monitoring violations were for failure to meet the requirements of the Total Coliform Rule. All public water systems in the state must test for this type of bacteria every month they dispense water to the public. Monitoring violations are by far the most common. The department is particularly concerned when monitoring violations occur at public water systems that have a history of bacteriological contamination. Adequate testing is the only way to know for sure if the problems have been corrected or have reoccurred.

Significant Non-Compliers

Percent of Population Served by SNC Water Systems

Drinking Water Trends

Percent of population that received water from a community water supply that met all health-based standards.

by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.”

The CCR provides detailed information about the specific community water system, while this report does not. Much of this Annual Compliance Report contains statistics and summary information with listings of health-related and chronic monitoring violations. The majority of systems do not have violations and are therefore not listed in the ACR. The CCR provides customers with information about their own drinking water and health. It includes specifics about their water system, including the source of drinking water and the levels of naturally occurring substances in drinking water. Usually these pose no health threat and are not violations. The CCR must list violations of state and federal requirements for that year. Customers of larger water systems had an individual report mailed to them or saw the CCR published in the local newspaper. The largest systems, those serving 100,000 people or more, must post their CCRs on the Web. Smaller water systems may have posted the CCR in their office or a public building. Approximately 94 percent of the state’s community water systems are complying with the requirement to produce and distribute the CCR. Anyone can request a copy of their CCR from their public water system or by calling the department’s Public Drinking Water Branch at 1-800-361-4827 or (573) 751-5331.

The Public Drinking Water Branch reports the following significant changes for the year 2005 in comparison to 2004.

- MCL violations for total coliform bacteria decreased 14 percent from 495 to 425.
- Acute MCL violations for fecal coliform/E. coli decreased 35 percent from 31 to 20.
- Major monitoring violations of the Total Coliform Rule decreased 7 percent from 846 to 787.

Less than one percent, 18 out of the 2,741 public water systems in the state, had acute violations for fecal coliform or E. coli in 2005. (Two of these 18 systems each had 2 acute MCL violations during the year, resulting in a total of 20 acute MCLs.) While these acute violations can be serious, they are rare. Some people, however, may be more vulnerable to water-borne illness than the general population.

To educate the public on this issue, all community water systems are required to make their 2005 Consumer Confidence Report (CCR) available to customers by July 1, 2006. Each report must include the following warning:

“Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and CDC (national Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection

Compliance Activities: Preserving the Quality of the Drinking Water

The department works closely with violators to return them to compliance in a timely manner. This includes phone contacts, on-site inspections, meetings with owners or operators and technical assistance as needed. For the more serious violations, a bilateral compliance agreement between the water system owner and the department is the tool generally used to move the system back into compliance. Essentially, the agreements are written agreements negotiated between and signed by the system owner and department staff. This process allows the department to determine the improvements the water system needs to make without either party having to endure the time and cost of litigation.

If a water system violates an agreement, the department implements a negotiated settlement policy. Negotiated settlement agreements are more formal and enforceable than bilateral compliance agreements

and are reviewed and signed by staff from the Missouri Attorney General's Office. If the negotiated settlement agreement is unsuccessful, the department refers the case for legal action through the courts.

Public Drinking Water Branch staff work in conjunction with other agencies to protect public health. For example, the department works closely with the Department of Health and Senior Services to coordinate enforcement activity against facilities such as restaurants, which are regulated by both agencies.

The Department of Natural Resources established a new Field Services Division in August 2005. The division will focus on improving local services and proactively helping communities and facilities understand and meet environmental regulations. Fundamental to this new approach has been the development of Environmental Assistance Visits. These visits are an effective tool to help facilities with new permits, providing an informal and scheduled walk-through

of their permit requirements. It provides on-site compliance assistance consultation before the department's first formal inspection at the facility.

The department also provides training and technical assistance in an effort to prevent the occurrence of violations. Training is routinely provided to operators and owners of public water systems around the state, primarily concentrating on the basic principles of running a water system, performing the required monitoring and preventing contamination of the system. Technical assistance in the form of phone contacts and on-site visits is also available to help water system operators avoid or correct problems. Staff in the department's five regional and 15 satellite offices carry out most of these activities.

For all violations, public water systems are required to notify the consumers they serve. The department provides all public water systems with the necessary forms and information to effectively notify the public. The method of notification varies by the violation and system type. Systems must then report back to the department how the public notice was performed. Some violations, such as the confirmed detection of fecal coliform bacteria or E. coli, warrant more immediate action due to the threat to public health. For such acute violations, the department requires systems to notify customers within 24 hours to boil water before consumption. Boil water orders remain in effect until the problem has been corrected and the water is safe to consume.

Major Enforcement Activities

For Further Information

Information regarding the contents of this report or related data on Missouri's public water systems can be obtained by writing to the Missouri Department of Natural Resources, Public Drinking Branch, Water Protection Program, P.O. Box 176, Jefferson City, MO 65102 or calling 1-800-361-4827 or (573) 751-5331. You can also visit the department's Web site at www.dnr.mo.gov/env/wpp/dw-index.htm.

Summary of Violations Table

The following definitions apply to the Summary of Violations table.

Filtered Systems: Water systems that have installed filtration treatment [10 CSR 60-4.055].

Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally occurring in some water, but can get into water through farming, chemical manufacturing, and other human activities. The department has established MCLs for 15 inorganic contaminants. [10 CSR 60-4.030].

Lead and Copper Rule: This rule establishes national limits on lead and copper in drinking water [10CSR 60-15.010]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. The department reports violations of the Lead and Copper Rule for the following six categories:

- *Initial lead and copper tap M/R (Monitoring /Reporting):* A violation where a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.
- *Follow-up or routine lead and copper tap M/R (Monitoring /Reporting):* A violation where a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.
- *Treatment installation:* Violations for a failure to install optimal corrosion control treatment system or source water treatment system which would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in both categories].
- *Lead service line replacement:* A violation for a system's failure to replace lead service lines on the schedule required by the regulation.
- *Public education:* A violation where a system did not provide required public education about reducing or avoiding lead intake from water.

Maximum Contaminant Level (MCL): The highest amount of a contaminant allowed in drinking water. MCLs ensure drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

Monitoring: The department specifies which water testing methods the water systems must use and

sets schedules for the frequency of testing. A water system that does not follow the department's schedule or methodology is in violation [10 CSR 60-4.010].

States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period.

A major monitoring violation for the surface water treatment rule occurs when at least 90 percent of the required samples are not taken or results are not reported during the compliance period.

Organic Contaminants: Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. The department has set legal limits on 54 organic contaminants that are to be reported [10CSR 60-4.040 and 4.100].

Radionuclides: Radioactive particles, which can occur naturally in water or result from human activity. The department has set legal limits on five types of radionuclides: radium-226, radium-228, uranium, gross alpha, and beta particle/photon radioactivity [10 CSR 60-4.060]. Violations for these contaminants are to be reported using the following four categories:

- *Gross alpha:* A violation for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium.

- *Combined radium-226 and radium-228*: A violation for combined radiation from these two isotopes above MCL of 5 pCi/L.
- *Uranium*: A violation for Uranium above the MCL of 30 Micrograms/liter.
- *Gross beta*: A violation for beta particle and photon radioactivity from man-made radionuclides above 4 milli-rem/year.

Surface Water Treatment Rule:

The Surface Water Treatment Rules (Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, Long Term 1 Enhanced Surface Water Treatment Rule) establish criteria under which water systems supplied by surface water sources, or ground water sources under the direct influence of surface water, must filter and disinfect their water [10 CSR 60-4.055]. Violations of the Surface Water Treatment Rule are reported for the following categories:

- *Monitoring, routine/repeat (for filtered systems)*: A violation for a system's failure to carry out required tests, or to report the results of those tests.
- *Treatment techniques (for filtered systems)*: A violation for a system's failure to properly treat its water.

Total Coliform Rule (TCR): The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause short-term health problems. If no samples are collected during the one-month compliance period, a

significant monitoring violation occurs. States report four categories of violations:

- *Acute MCL violation*: A violation where the system found fecal coliform or E. Coli, potentially harmful bacteria, in its water, thereby violating the rule.
- *Non-acute MCL violation*: A violation where the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5 percent of the samples positive for total coliform is a violation.
- *Major routine and follow-up monitoring*: A violation where a system did not perform any monitoring. (One number is to be reported for the sum of the violations in these two categories.)
- *Sanitary Survey*: A major monitoring violation if a system fails to collect five routine monthly samples if sanitary survey is not performed.

Treatment Techniques: A water disinfection process that EPA requires instead of an MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

Unfiltered Systems: Missouri has required filtration of all surface water sources for many years. There are no unfiltered surface systems in Missouri and therefore no violations in this category.

Violation: A failure to meet any state or federal drinking water regulation.

Organic Contaminants

Appendix C
Major Repeat Monitoring Violations

The following systems had major repeat monitoring violations for the months listed. A major repeat monitoring violation occurs when a routine sample tests positive for total coliform bacteria and that system fails to submit any follow-up, or repeat, samples as required.

County	ID#	System Name	Month(s)
Barry	MO5031380	Central Crossing Acres II	July
Buchanan	MO1011181	Dekalb	November
Camden	MO3212429	Moonies Resort	September
	MO3212447	Jessies Place	January
	MO3212458	Tortilla Flats Inc	September
	MO3248201	Standing Rock Campground	May
Cedar	MO5036164	Stockton Hills Water Co	December
Christian	MO5036305	Pippenville & Oak Park Owners Assn	July
Franklin	MO6282353	Fr. Jakle Home Assn	June
Greene	MO5048194	Oak Crest Estates Mobile Home Subd	August
	MO5258079	General Store	April
Hickory	MO5192686	Nemo Bridge Resort	July
Jefferson	MO6030365	Lake Forest Properties	January
	MO6036316	Palisades Village	July
	MO6180934	River Cement Company	May
Mcdonald	MO5010449	Lanagan	September
Miller	MO3291408	Ricks C-store & More	May
Montgomery	MO3011121	Rhineland	April
Polk	MO5041146	Valley View Acres	June
St Louis	MO6241111	Jellystone Park Campgroud	August
