SUPPLEMENTARY LISTING RECORD

NRIS Reference Number: 05000115  Date of Listing: May 11, 2005

Property Name: Gravois-Jefferson Streetcar Suburb Historic District

County: St. Louis  State: Missouri

South St. Louis Historic Working- and Middle-Class Streetcar Suburbs

Multiple Name

This property is listed in the National Register of Historic Places in accordance with the attached nomination documentation subject to the following exceptions, exclusions, or amendments, notwithstanding the National Park Service certification included in the nomination documentation.

Amended Items in Nomination:

Section 5. Classification

The house at 3019 Chippewa Street is hereby reclassified as a contributing building. With this change, the number of resources within the property is hereby revised to include 4,635 contributing buildings, 7 contributing sites, 1 contributing structure, and 1,678 noncontributing buildings, for a total of 4,643 contributing and 1,678 noncontributing resources.

The Missouri State Historic Preservation Office was notified of this amendment.

8. Statement of Significance

Applicable National Register Criteria

[X] A. Property is associated with events that have made a significant contribution to the broad patterns of our history

[ ] B. Property is associated with the lives of persons significant in our past.

[X] C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

[ ] D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

Property is:

[X] A. owned by a religious institution or used for religious purposes.

[ ] B. removed from its original location.

[ ] C. a birthplace or grave.

[ ] D. a cemetery.

[ ] E. a reconstructed building, object, or structure.

[ ] F. a commemorative property.

[ ] G. less than 50 years of age or achieved significance within the past 50 years.

MODERN MOVEMENT: Art Deco
MODERN MOVEMENT: Minimal Traditional
MIXED

SUMMARY DESCRIPTION

The Gravois-Jefferson Streetcar Suburb Historic District is located within the boundaries of the City of St. Louis, Missouri. The ~715-acre District is a triangular area generally bounded by the intersection of Gravois and South Jefferson Avenues at the north, South Jefferson Avenue and South Broadway Street (south of Chippewa Street) on the east, Meramec Street on the south, South Grand Boulevard on the west, and Gravois Avenue on the northwest. 1 Gravois Avenue is a major arterial street and historically served as a wagon, streetcar, and vehicular transit corridor. South Jefferson Avenue also was and is a major transportation corridor. Meramec Street is a major collector street. Mixed commercial, institutional, and residential use along these major city thoroughfares visually and historically defines the survey area.

Within the triangle formed by the District’s arterial street boundaries, the setting retains its overwhelming residential land use and its buildings and streetscapes retain a high degree of historic architectural integrity. The building stock contains similar functional and architectural property types associated with the evolution of early working-class housing and related commercial and institutional property types typically found in early working- and middle-class streetcar suburbs in St. Louis. The vast majority of these buildings are one- and two-story brick buildings sited on narrow urban lots arranged in a cohesive grid system platted in blocks bisected by brick alleys. The uniformity of lot size, sidewalks, alleys, and building set-backs as development evolved southward and the continuous rows of one- and two-story residences that share the same scale, massing, and repetition of architectural styles and ornamentation provide a cohesive character to the District. The retention of the granite curbs and the original brick paving in alleys and on many interior streets further reinforces the District’s visual unity. The dense assembly of red brick buildings with raised limestone foundations, the majority of which were built in a thirty-year time span, further contributes to the integrated nature of the early streetcar neighborhoods that compose the District.

1 Historically, South Grand Boulevard was called Grand Avenue and Gravois Avenue was called Gravois Road.
Figure 1: District Location Map
Figure 2: District Street System

[Map of Gravois-Jefferson Streetcar Suburb Historic District, St. Louis (Independent City) St. Louis]
Every three to four blocks there are east-west commercial streets, such as Cherokee, Chippewa, and Meramec Streets, lined with pedestrian-scale buildings that form neighborhood commercial enclaves. Scattered throughout the District, neighborhood commercial nodes are at most residential street intersections. Most corner commercial buildings rise to two or three stories. All of the commercial two- and three-story buildings have retail space on the ground floor and residential or office spaces above. The style and materials of the commercial buildings in these neighborhood shopping areas reflect that of the surrounding residential neighborhood, contributing to the uniform appearance of the District. Located along the arterial and collector streets and on prominent corners within the District are a number of churches and large school complexes. Large parks composed of one to four rectangular blocks provide landscaped recreational venues for these early working-class suburban neighborhoods in the western and southern parts of the District.

There are 4,642 contributing resources in the District dating from circa 1880 to circa 1940. Of these, 629 are contributing ancillary buildings. There are 1,679 non-contributing resources, of which 1,055 are ancillary buildings. There are also 251 vacant lots that are not counted as being contributing or non-contributing. Of the contributing primary resources, over 90 percent are residential buildings, of which 4 percent are single-family residential properties and 96 percent are multi-family residential housing types. Of the contributing resources, more than 7 percent are commercial buildings and 1 percent are cultural and recreation resources. As a group, these contributing resources retain an exceptionally high degree of integrity. The greatest loss of integrity is along the arterial streets of South Jefferson Avenue/South Broadway Street on the east and along Gravois Avenue/South Grand Boulevard on the west.

ELABORATION

LOCATION AND SETTING

The District is part of a larger area in the city’s historic South Side, which is generally bounded by Lafayette Avenue on the north, South Broadway Street on the east, Bates Street on the south, and South Grand Boulevard on the west. The land in this general area is rolling karst plains that slope southwestward to the River Des Peres and west to a ridge along South Grand Boulevard. During the 1960s, federally funded urban renewal programs leveled the neighborhoods on the north edge of Mill Creek Valley near South Jefferson Avenue. The construction of a federal interstate system in the area beginning in the mid-1960s further destroyed historic neighborhoods. Considerable demolition occurred in the construction of what is today Interstate 55 to the east of the District and Interstate 44 to the north of the District. The limited access and elevated right-of-way of these freeway systems formed artificial boundaries, further severing important physical and synergistic connections between the South Side.

See the Functional Property Map provided with this submission for delineation of domestic residential, commercial/industrial, and cultural/recreational land uses.
neighborhoods. Other than the Soulard Neighborhood in the area between Interstate 55 and the Mississippi River, the area that was once the earliest to develop in South St. Louis retains little of its original residential, commercial, and industrial neighborhoods.

Arterial streets visually define the boundaries of the District. Considerable modern intrusion and the widening of South Jefferson Avenue created a disruption in the visual continuity that once existed between the east and west sides of South Jefferson Avenue. Modern buildings, large institutional complexes with surrounding surface parking lots, and vacant lots compromise the historical integrity of much of both sides of South Jefferson Avenue and continue south from where South Jefferson Avenue merges with South Broadway Street. Only remnants of a historic streetscape that included late nineteenth and early twentieth century high style middle-class single-family residences, townhouses, churches, and commercial buildings remain. Directly east of the northern portion of the District, across South Jefferson Avenue, is the Benton Park National Register Historic District, which is bounded by Gravois Avenue on the north, Interstate 55 on the east, South Broadway Street on the south, and South Jefferson Avenue on the west. This early middle- and upper-middle-class streetcar suburb contains a large number of high style single-family residences erected in the late nineteenth and early twentieth centuries. Cherokee Street, a historic commercial streetcar corridor in South St. Louis, continues to retain sufficient integrity on both sides of South Jefferson Avenue to communicate what was once a continuous corridor linking these neighborhoods. The same general conditions of modern commercial intrusion exist along Gravois Avenue (which was also widened) and south of where it merges with South Grand Boulevard. Because of clustering and locations at intersections, the remaining historic resources on these two major thoroughfares are sufficient in number and density to form a visual boundary that communicates their original orientation to these historic routes and provides distinct gateways into the District. Meramec Street also features a mix of residential, commercial, and institutional uses. Here again, the nature of the historic resources, which reflect mixed use although coupled with modern intrusion and vacant parcels, creates a visual boundary. Changes in the orientation of the traditional grid system to the south and southwest of Meramec Street reinforce this boundary as a delineating element and reflect additional developmental contexts. Small enclaves of neighborhoods with similar historic resources are in the neighborhoods west and southwest of Gravois Avenue/South Grand Boulevard, east of South Broadway Street, and south of Meramec Street.

Just as they did during the development of the neighborhoods within the District, the commercial corridors that form the District’s boundaries today define a historic area that is overwhelmingly residential. Exclusively residential streets run in a north-south direction along the longest portion of the blocks. Neighborhood commercial and mixed-use streets run east-west and connect with arterial streets. Large historic churches and school complexes are located on the arterial boundary streets of Gravois Avenue/South Grand Boulevard, South Jefferson Avenue/South Broadway Street, and Meramec Street. Smaller scale churches, neighborhood schools, and social buildings occur at interior intersections.
Although platted at irregular intervals over a fifty-year period beginning in the 1860s, residential development in the District actually occurred in a wholesale manner beginning in the late 1870s and continued through the early 1920s, with the greatest number of buildings erected between 1890 and 1910. Moreover, once development began, it did not occur in a sequential pattern. A review of a computer-generated map showing decades of construction in the District reveals a scattered pattern of development between 1890 and 1920. This “uniform” mixture contributes to the homogeneous appearance of the District. It is not unusual to find streetscapes that include two-family townhouses from the 1890s across the street from or next door to a townhouse dating from 1910. Because both individual property owners and speculative developers erected these residential units, the one-story shotgun house coexisted with the four-family flat throughout the District. Unifying all the buildings is the consistency in size, scale, materials, lots size, set-backs, and setting.

Subtle visual distinctions exist that convey information about the neighborhoods and small subdivisions that evolved within the District. A change in the platting of lots within the preexisting grid of streets created discreet enclaves. For example, in the earliest area to be developed north of Juniata Street, the blocks are smaller and the ends of the blocks have lots facing onto the east-west streets only where there is mixed residential/commercial development. While there is a uniform set back on a block-by-block basis in this area, there are areas where there is no set back, creating a more urban appearance than is found on the streetscapes several blocks to the south that have grass lawns and terraces. South of Juniata Street, the north-south sides of the blocks are longer and an I- or a T-shaped interior alley system creates end blocks with a mix of residential and commercial lots facing onto east-west streets. In a number of subdivisions, a central north-south alley bisects the block, creating residential lots that face only onto north-south streets that retain the long block form consistent with those in the surrounding area. West of Virginia Street and south of Chippewa Street, the orientation of the blocks changes with the long side running east-west.

Northern Section
The earliest buildings in the District are generally in the northern part of the District near late nineteenth century horse-drawn and electric streetcar lines that ran along Gravois Avenue, Arsenal Street, and Jefferson Avenue. The blocks between Juniata, Arsenal, and Pestalozzi Streets are smaller than those found elsewhere in the District. The convergence of Gravois Avenue and South Jefferson Avenue, roads that date to the sale of the common lands, created a skewed grid of triangular, trapezoidal, and parallelogram blocks. There are numerous alley buildings in this area due to its mixed commercial, industrial, and residential use during the late nineteenth century. Arsenal Street, which predates the subdivision of the area, runs diagonally southeast to northwest. Juniata Street is aligned on a true east-west grid and sets the grid parameters for the remaining street system to the south. Some of the few remaining factories dating to the late nineteenth century are located in this area.
In the area south of Juniata Street to Potomac Street, there are a considerable number of residences and commercial buildings dating to the 1880s because of early horse-drawn streetcar lines along South Jefferson Avenue and Cherokee Street. Cherokee Street was and is a major commercial street and a continuation of a larger retail corridor that extended west from the historic Benton Park neighborhood. Interrupting the urban density is Gravois Park, bounded by Potomac and Miami Streets and South Compton and Louisiana Avenues.

Southern Section
By virtue of the roles of Chippewa Street, South Jefferson Avenue / South Broadway Street, and Keokuk Street as early horsecar lines, the neighborhoods between Potomac Street and Osage Street have a mix of residential buildings dating from the early 1880s through World War I. The earliest buildings are sometimes clustered, but as a rule, coexist with buildings from the first decades of the twentieth century. A visual transition begins to depart from the dense grid of closely grouped multi-family residences. Reflecting twentieth century dates of construction, lot sizes and buildings gradually become wider in these neighborhoods and a discreet change in materials and stylistic references occurs. This area, however, still retains a significant mix of both late nineteenth and early twentieth century buildings.

The shift from nineteenth century architectural treatments to twentieth century designs intensifies in the area south of Osage Street. As is the case throughout the District, this area also includes scattered numbers of late nineteenth and turn-of-the-century buildings; however, a greater number of the resources south of Osage Street date from the post-World War I period. In particular, the predominant use of gable-front residential designs departs from the shaped parapet and mansard roof prototype dominating the designs in the areas to the north. A subtle change in property types occurs with the presence of more single-family dwellings and a transition from the nineteenth century four-family flat prototype to the post-World War I walk-up and contemporaneous low-rise apartment building. This area is further defined by historic open spaces comprised by Meramec Triangle Park and Minnie Woodman Park near Meramec and South Broadway Streets, Laclede Park at Gasconade Street and Iowa Avenue, and the Marquette Park located between Osage and Gasconade Streets and Minnesota and Louisiana Avenues.

Architectural Style and Building Type

The vast majority of the residential buildings in the survey area are variations on recurring architectural themes and include the residential property types documented in the Multiple Property Documentation Form (MPDF) “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs” and include detached single-family houses, multi-family flats, row houses, multi-family walk-ups, and low-rise apartment buildings. With the exception of one-story and one-and-a-half story “shotgun” folk house forms (which extend from the late nineteenth century through to the 1950s HUD-financed designs), the majority of the survey area’s residences are two-story buildings with two- or three-bay façades. All have
narrow fronts and long side elevations, in keeping with the narrow lots. All but a few are masonry structures; an overwhelming number have dark brick walls with raised limestone foundations.

The commercial retail stores and special services buildings fit the Main Street prototype of one-part commercial and two-part commercial blocks as documented in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” The vast majority of these buildings date from circa 1890 to circa 1920. Other property types typically found in early streetcar suburbs that are also present in the District are social halls such as the Turnverein social hall on the northwest corner of Potomac and Ohio Streets, church buildings, schools, parks, and recreational buildings.

All of these buildings feature the signature brickwork of St. Louis residential and neighborhood commercial architecture in the late nineteenth and early twentieth centuries. Extending for block after block are one- and two-story brick buildings that feature common brickwork motifs often used to reference architectural details such as Romanesque arches, Colonial Revival friezes, and other stylistic idioms.

Ancillary buildings are an important character-defining element of the District. Extant carriage houses and mixed-use alley buildings contribute to the density of the District. Extant garages and storage sheds provide visual clues as to the evolution of the outbuildings from fuel storage sheds and shelters for animals and carriages to meeting the needs of the automotive age. The size of these ancillary buildings reflects the units for which they were built. Detached single-family houses have small one-bay garages. Townhouses and two-family flats have two-bay garage buildings. Four-family flats often have structures that accommodate up to four cars. Like their predecessors, the carriage house and barn, they are oriented to the brick alleys that bisect each block.

Architectural styles found in the District range from popular high style designs to building types with more understated stylistic references. Most of the high style buildings are restrained versions applied to working- and middle-class neighborhoods and include variations of popular styles from the era in which they were constructed.

The District’s Late Victorian style buildings include 29 Italianate; 330 Second Empire (Photographs # 67, 79, 84); 20 Queen Anne (Photograph # 70); and 6 Romanesque Revival style buildings. There are 94 buildings evidencing strong Late Nineteenth and Early Twentieth Century Revival styles, including 1 Renaissance Revival (Photograph # 11); 17 Tudor Revival; 7 Late Gothic Revival churches (Photographs # 8, 18); 7 Mission/Spanish Colonial Revival (Photograph # 14); and 3 Classical Revival (Photograph # 86). There are 58 buildings evidencing strong Late Nineteenth and Early Twentieth Century American Movement styles, including 56 Craftsman style (Photograph # 105); 1 Minimal Traditional residence; and
1 Art Deco style commercial building (Photograph # 36). There are 30 Mixed style buildings incorporating three or more contemporaneous styles.

The great majority of the buildings in the District are local adaptations of national folk house types or vernacular forms and plans that are distinguishable building types that have associations with their historic function and form and are documented in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” Although these buildings encompass a variety of styles, fenestration patterns, roof forms, materials, and ornamentation, all can be further classified based on their form, in particular, and the primary façade, which provides cues as to their original use and the internal arrangement of rooms.

For the purposes of this nomination as a part of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs,” all properties are classified by functional typology and are listed either as contributing or non-contributing and then by their functional property type. Contributing buildings in the District meet the registration requirements applicable to their functional property type as established in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.”
CONTRIBUTING RESIDENTIAL PROPERTIES

There are 3,672 contributing residential resources in the District. They are composed of the following domestic building functional property types and sub-types as outlined in Sections E and F of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.”

SINGLE-FAMILY RESIDENCES (c.1875-c.1940)

The Single-Family property type includes properties erected exclusively for single-family residences between c.1875 and c.1940 in the District. Those found in the District include high style examples of the Second Empire, Queen Anne, Craftsman, and Tudor Revival styles, as well as vernacular adaptations of National Folk House forms, including American Four Square, Bungaloid, Gabled Ell, Upright and Wing, Composite¹, and Flounder houses, as documented in Sections E and F of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.”

MULTI-FAMILY FLAT PLANS (c.1880-c.1940)

The Multi-Family Flat property sub-type is described in Section F of the Multiple Property Submission "South St. Louis Historic Working- and Middle-Class Streetcar Suburbs." This property sub-type is exhibited in late nineteenth through mid-twentieth century architectural styles as documented in the associated historic theme "Architectural Patterns of South St. Louis Streetcar Suburbs: 1880-1940." They are composed of the following functional property sub-types: Two-Family Flat, Four-Family Flat, Six-Family Flat, and Eight-Family Flat.

2850. 3501 Arkansas Ave.  Date of Construction:  1909  Integrity: Good to Fair
Property Type: Two-Family Flat
Style: Roof shape: Flat
No. of stories: 2 Porch: Stoop
Foundation: Stone Walls: Brick
Architect/Builder: Fennessy, Edw. (1909)

2851. 3008 Chippewa St.  Date of Construction: c. 1924  Integrity: Good to Fair
Property Type: Two-Family Flat
Style: Roof shape: Gable: Front
No. of stories: 2 Porch: Full: Shed
Foundation: Stone Walls: Brick
Architect/Builder: Wetterhan, E. (1902)

2852. 3134 Chippewa St.  Date of Construction:  1927  Integrity: Good to Fair
Property Type: Two-Family Flat
Style: Roof shape: Flat
No. of stories: 2 Porch: Full
Foundation: Stone Walls: Brick
Architect/Builder: Unknown

COMMERCIAL/INDUSTRIAL PROPERTY TYPES

There are 304 contributing Commercial/Industrial resources in the District. They are composed of the following Commercial/Industrial building functional property types and sub-types as outlined in Sections E and F of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.”

ONE-PART COMMERCIAL BLOCK

The One-Part Commercial Block sub-type is described in Section F of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” This property sub-type is exhibited in late nineteenth through mid-twentieth century architectural styles as documented in the associated historic theme “Architectural Patterns of South St. Louis Streetcar Suburbs: 1880-1940.”

4302. 2902 Chippewa St.  
**Date of Construction:** c. 1915  
**Property Type:** One-Part Commercial Block  
**Style:**  
**Roof shape:** Flat  
**No. of stories:** 1  
**Porch:** Stoop  
**Foundation:** Stone  
**Walls:** Brick  
**Architect/Builder:** Unknown

4303. 2912 Chippewa St.  
**Date of Construction:** 1914  
**Property Type:** One-Part Commercial Block: Theater  
**Style:**  
**Roof shape:** Flat  
**No. of stories:** 1  
**Porch:** Stoop  
**Foundation:** Stone  
**Walls:** Brick  
**Architect/Builder:** Mueller, J. (1914)

4304. 3030 Gravois Ave.  
**Date of Construction:** c. 1907  
**Property Type:** One-Part Commercial Block  
**Style:**  
**Roof shape:** Flat  
**No. of stories:** 1

MULTI-ENTRANCE WITH DISPLAY WINDOWS

The Multi-Entrance with Display Windows commercial property sub-type is described in Section F of the Multiple Property Submission “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” This property sub-type is exhibited in late nineteenth through mid-twentieth century architectural styles as documented in the associated historic theme “Architectural Patterns of South St. Louis Streetcar Suburbs: 1880-1940.”

STATEMENT OF SIGNIFICANCE

The Gravois-Jefferson Streetcar Suburb Historic District located in the City of St. Louis, Missouri is eligible for listing in the National Register of Historic Places under Criterion A for the area of COMMUNITY PLANNING AND DEVELOPMENT and under Criterion C for the area of ARCHITECTURE for its association with the history of St. Louis as described in the Multiple Property Documentation Form (MPDF) “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” Located within South St. Louis, the District retains a high degree of architectural integrity and has significant associations with the early suburbanization of St. Louis. The historic resources within the District date to defined thematic periods of community planning and development in St. Louis documented in the above-referenced MPDF, including “St. Louis’ Original Urban Landscape and the Horse-Drawn Streetcar: 1803-1880,” “The Spreading Metropolis: 1880-1930,” and “South St. Louis Working- and Middle-Class Suburban Neighborhoods: 1880-1940.” The historic resources within the District also date to defined contextual periods of architecture in St. Louis that are documented in the MPDF theme “Architectural Patterns of South St. Louis Streetcar Suburbs: 1880-1940.”

The District is locally significant in the area of Community Planning and Development for its associations with significant urban development patterns relating to the emigration of the working- and middle-class to

¹ This list represents the most prolific architect/builders in the District, each having designed/constructed at least twenty-five buildings.
suburban neighborhoods stimulated by the tremendous growth of urban centers and the concurrent advent of fixed-rail streetcar systems in the late nineteenth and early twentieth centuries. Specifically, the District represents the late nineteenth and early twentieth century phenomenon of the working- and middle-class quest for relief from the crowded and polluted conditions of the older residential section of St. Louis. As such, its resources have associations with the contexts developed by the National Park Service relating to streetcar neighborhoods as documented in the MPDF theme “Suburban Development in the United States: 1850-1945.” The District meets four of six aspects of suburban development patterns established by the National Park Service. It contains (1) “residential neighborhoods that through historic events and associations have achieved a cohesive identity”; (2) “groups of contiguous residential subdivisions that are historically interrelated by design, planning, or historic associations”; including (3) “residential clusters along streetcar lines or major thoroughfares”; and (4) incorporates “concentrations of multiple family units such as duplexes, double and triple deckers, and apartment houses.” It also incorporates nonresidential resources that are “integyally related to the neighborhoods by design, plan, or association and share a common period of historic significance,” including commercial shopping areas, institutions, and facilities that supported and enhanced suburban domestic life — schools, churches, stores, community buildings, parks, playgrounds, and transportation corridors associated with daily commuting.²

The District derives its architectural significance from the number and variety of modest residential building types and styles it contains that collectively represent an important facet in the evolution of the city’s residential architecture during the late nineteenth and early twentieth centuries. These residential buildings reflect the work of builders and developers who responded to a growing working- and middle-class housing market. Those designed as cohesive units and built a block or more at a time have associations with the evolution of funding sources for speculative development of working-class housing, while the small single-family units scattered throughout the District reflect economic conditions and financing mechanisms of the period that allowed owners to contract for the construction of their houses. In particular, the dwellings in the District represent the complete gamut of late nineteenth and early twentieth century working-class residential building types found in St. Louis.

Although most of the buildings within the District are not particularly noteworthy as individual structures representing important architectural styles; as a group, they comprise an architecturally significant collection of small-scale residential and neighborhood commercial and institutional property types associated with streetcar neighborhoods in South St. Louis. Due to its density, variations on common

² The National Park Service guidelines define a historic suburb by the historical events that shaped it and by its location in relation to the existing city, regardless of current transportation modes, and specifically notes that this applies to densely built streetcar suburbs such as the survey area even though the streetcar and trolley tracks that created them have disappeared.
popular architectural themes from a finite time period, and the exclusive concentration of working-class residential property types, the District has a distinctly homogeneous appearance that differentiates it from older residential neighborhoods in the city’s historic core. Moreover, it is further distinguished by its size, the incorporation of numerous contemporaneous working-class suburbs, and the advent of affordable fixed-rail public transportation.

The District has 4,642 contributing resources (including 629 ancillary buildings) and 1,679 non-contributing properties (including 1,055 ancillary buildings). There are also 251 vacant lots. The period of significance begins in circa 1880 with the residential development associated with the first horse-drawn streetcar fixed rail system in the District and continues to circa 1940, the date of the last construction in the District prior to the onset of World War II and a change in streetcar use and related construction dictated by war-time shortages. The year 1887 is listed as a significant date for its associations with the advent of the electric streetcar in St. Louis.

**ELABORATION**

Based on recent National Park Service guidelines for identifying and evaluating properties related to America’s suburbanization, the District meets important thresholds established by the agency. It is, as defined by the National Park Service,

_A geographic area, usually located outside the central city, that was historically connected to the city by one or more modes of transportation, subdivided and developed primarily for residential use according to a plan and possessing a significant concentration, linkage and continuity of dwellings on small parcels of land, roads and streets, utilities and community facilities._

The evolution of the District as a streetcar suburb is an important type and pattern of development in St. Louis and reflects a unique development history of South St. Louis in relation to other streetcar suburbs in City. This is due to its original status as part of the City Commons of St. Louis and its location in the Mill Creek Valley, the great divide that initially separated the city physically and later socially and politically into north and south sides. The Mill Tract (Chouteau’s Pond) located near present-day Lafayette Avenue separated development activity in the city beginning in the late eighteenth century. A bridge near what is presently 14th Street spanned Mill Creek, and crossings at Third and Fifth Streets were the only routes connecting the South Side with the city’s historic core.

---

This division remained even after the city drained the pond and opened the broad, flat valley for development. The Pacific Railroad, seeking a right-of-way to the west out of the city, secured the necessary land and promptly laid tracks in the valley. Because of the necessity of at-grade crossings, the rail line discouraged street and road construction and the consequent development that would ensue. Commerce between the countryside to the south and southwest and St. Louis' growing commercial center depended on roads that pre-dated the railroad. After the Civil War, the east end of Mill Creek Valley filled with train yards and industrial development quickly occurred near the freight center. This concentration of rails further limited road and street connections that would pass through this area. As a result, few roads and little public transit crossed the railroad tracts. Jefferson Avenue, platted as part of the Commons Lands subdivision sales in the late 1830s, served as a primary route providing access to and from downtown until the completion of the Grand Avenue viaduct in 1889 stimulated development west of Grand Avenue.  

The lack of north-south corridors crossing the railroad tracks served as a deterrent to easy movement in and out of the area from the inner city and delayed the arrival of public transportation to the area, which was crucial to the development of residential areas. Streets in the District were slow to open and the limited number of connected streets within the District and to the core of the city led to a sense of isolation, which reinforced ethnic and class divisions between those who lived in the South Side and other areas of St. Louis. As settlement patterns occurred at different rates in different geographical areas, the city's residents further defined their community in terms of north and south. As a result, the South Side's slow development created distinct land use and architectural patterns that differentiated it from older residential neighborhoods in the city's historic core.

**DISTRICT DEVELOPMENT HISTORY**

As noted, the District was originally part of the Commons Land owned by the City of St. Louis that evolved from the European patterns of land allotment established by the French prior to the Louisiana Purchase. The city held Commons Land for the use of all of its citizens for use as pasturage and wood lots. These allotments ran in long narrow fields west from the Mississippi River.

There were originally five sets of common fields surrounding the city and the District lies within areas of the Petite Prairie and the Commons of St. Louis. Figure 3, an 1847 map of St. Louis, shows a triangle in the lower middle portion, which delineates the general area of the District.
In the first half of the nineteenth century, St. Louis was mostly confined to its riverfront area and extended west by only a few blocks, within walking distance of home and work. The city made a significant effort to encourage private development away from the water’s edge by selling approximately two thousand acres of the St. Louis Commons, which included the District area. The city first authorized the sale of large blocks of Commons Lands in March 1835.5

---

5 In 1836, the city stopped disputed land-claim inquiries that had resulted from decisions made by three different countries: France, Spain, and the United States. This was essential before there could be new legal owners in land sales.
These blocks were laid out in a grid of forty-acre areas, each divided into four ten-acre blocks. The area auctioned ran from the edge of Prairie des Noyers (Grand) and Jefferson Avenues, and from Chouteau Avenue to its intersection with the river. Heavy black lines highlight the District area within this tract in Figure 4.
The city auctioned the Commons Lands in a series of public sales beginning in 1836 and continuing into the mid-1850s. The more than a three-mile distance between the land being sold in South St. Louis and downtown diminished interest in the newly opened land. In the 1854 auction, the city tried to attract developers by offering forty-acre block units subdivided into smaller blocks, street grids and alleys, and twenty-five foot building lots, a configuration that was more typical of most American city grids. These divisions created a means of nurturing the speculative nature of home building. Grid divisions also created a uniformity of the landscape, which assured equal, uniform, and similar results on a block-by-block basis during the development process.

The result of this division of land for public sale was the spatial layout and physical appearance of the Gravois-Jefferson Streetcar Suburb Historic District. The city established a grid system and the uniform size of blocks and lots not only defined the pattern of the District, it also laid the foundation for the eventual north and south traffic flow through the District to and from the city center. The city's role was important in terms of community planning. Instead of developers deciding on a parcel-by-parcel basis how a subdivision would be divided into house lots, the city made those choices prior to the developer purchasing the land. Not only did this result in a cohesive system of streets that extended the city's existing grid into its first tier suburbs, another welcome benefit was the inclusion of two neighborhood parks from reservations in the Old Commons — Gravois and Laclede Parks.6

The 1854 sale was successful. Buyers, including individual heads of households of modest means, invested in small blocks or blocks of lots. The location of the actual auction in South St. Louis provided psychological assurances that the city would eventually provide the necessary infrastructure of streets, sewers, and water for the area's success as a residential area. The following

---

6 Norbury L. Wayman, "Marquette-Cherokee," in *History of St. Louis Neighborhoods* (St. Louis: St. Louis Community Development Agency, 1978), 5. Marquette Park at Osage Street and Minnesota Avenue was acquired in 1915 from the Board of Children's Guardians. The city acquired Minnie Wood Memorial Playground at South Broadway and Meramec Streets as a gift in 1925. Both parks were previously open space.
year, another sale took place and within a week all lots were sold. The bidders tended to be craft workers and small-time shopkeepers, much the same population that already inhabited closer-in neighborhoods in the South Side. Most landholders purchased small properties just south of Arsenal Street and along Gravois Avenue. Figure 5 shows the locations of the 1854 and 1855 Second and Third Subdivision sales in the District.

The sale of Commons Lands caused the District to have a checkerboard disbursement of small subdivision plats as it evolved. Instead of subdivisions tending to spiral outward from the core of the city, the dates of subdivisions were not necessarily determined by their proximity to the downtown core. Subsequent subdivisions and their locations were such that subdivisions platted in 1855 occur next to one dating to 1907.

Between the last sale of the Commons in the mid-1850s and the time residential development seriously began in the District around 1880, the city’s population grew from 77,860 to 350,518. During this period, the population spread outward in a fan shape from the center into new residential areas and the city, increasing the city limits in 1855, 1870, and 1875. The 1855 expansion included an area just west and south of South Grand Boulevard to Keokuk Street, within the northern part of the District.

While private initiative through the subdivision process eventually helped determine the city’s form in the twentieth century, in South St. Louis and in the District itself, Colonial-era patterns and the sale of the Commons based on a grid resulted in its pattern of subdivisions. When looking at the many early dates of recorded subdivisions within the District, one should not assume that a rush of housing began shortly after purchasers bought land and recorded plats. The platting dates for subdivisions within the District are misleading, as landowners sometimes held property for decades, sold it to others, or platted a subdivision and saw little happen. Between 1836 and 1874, property owners platted thirty-nine subdivisions. Between 1875 and 1884, there were nine new subdivisions; between 1885 and 1894 there were twenty-two; between 1895 and 1904 there were nine; between 1905 and 1914 there were eight; and between 1915 and 1924, developers platted four additions. From 1925 to the present, there were approximately fifteen new or replatted areas in the District. By studying the known or estimated dates of construction for the District’s residential housing stock, it is possible to ascertain how many years it took before building activity occurred after platting.

---

8 Besides the First, Second, and Third Subdivisions, there is four-block area just south of Marquette Park that was in the Fifth City Subdivision land sales in 1863. There were no other Second and Third Subdivision areas in Dutchtown south of Chippewa Street.
Other Important factors that affected community planning and growth patterns in the District also included the sinkholes that pockmarked the District; the limited number of transportation routes that connected the area to the city center and the fewer still that reached North St. Louis; the low levels of public transportation; and the profitable use of the land for small farms and dairies that persisted for years before there was an economic justification for residential development.

Located between prairie and forest, St. Louis sits on a karst plain of limestone constantly undermined by water in cave springs. Eventually, rock collapsed overhead and caused cave-ins. Deep pits, sometimes dozens per square mile, appeared in this plain. Besides the obstacles they caused in efficient use of the land, early residents used them as trash pits and sewers; their interconnected nature caused the spread of serious pollution and disease. Camille Dry's 1875 Pictorial St. Louis (see Figure 7) provides useful visual evidence of their presence.

Another factor affecting development patterns within the District was its location between two roads that were (and continued to be) main transportation routes out of town. Gravois Avenue provided access to the common fields, grazing areas, the Gravois settlement, and farmlands in the Meramec River Valley long before the development of the Commons Lands. It began as a trail to a salt spring and ferry near present-day Fenton in about 1804 and, over the years, Gravois Avenue, in particular, drew commercial uses along it as a farm-to-market road. In 1836, city surveyor Charles DeWard originally planned South Jefferson Avenue as a street that ran south from Chouteau Avenue (southern edge of the Chouteau Mill Pond Tract) and terminated by the river. For a long time, South Jefferson Avenue was undeveloped and disconnected from other roads. These two transportation routes – Gravois Avenue and South Jefferson Avenue – provided the main means of moving north and south, and then only as far as the core of the city; therefore,

11 The historic spelling is used here. The later east-west street in the area is variously spelled as Meramec and Meramec. The latter appears to be the most frequently found modern spelling.
those living in the District had limited convenient access to the rest of the city. Even after the eventual arrival of streetcar lines, it could take a day to reach the northern side of St. Louis from the District area.

Streets in the area were a problem. Although local landowners forwarded twenty-six petitions for street improvements, by 1870, citywide street improvements affected only four short blocks of Cherokee Street, five blocks of Chippewa Street, and two blocks of South Jefferson Avenue.\textsuperscript{12} The lack of paved roads, discontinuous connections among roads and streets, and the distant streetcar lines on Seventh Street and South Carondelet Avenue (now Eighteenth Street)\textsuperscript{13} fostered a sense of isolation in the area. Street paving in unimproved or remote sections of the city such as in the South Side, where the landscape was rough and property values low, would take a substantial investment at public expense and a commitment by the city that was not present in the last two decades of the nineteenth century.\textsuperscript{14}

At this time, the development of moderate to lower income residential areas away from a downtown’s core depended upon public transportation. While the affluent could keep or hire their own carriages and

\textsuperscript{14} Sandweiss, “Paving St. Louis Streets,” 103.
drivers, those without needed to live within a reasonable walking distance of their places of employment. In 1880, in the northern part of the District the streetcar ran along Gravois Avenue only as far south as Arsenal Street. The Seventh Street and Carondelet streetcar lines intersected Jefferson Avenue only at Chippewa Street. There were several industries nearby, including the Lemp Brewery on Cherokee Street established in 1864, the Missouri Glass Works just west of Cherokee Park, a ropewalk near Arsenal and 18th Street, and several brickyards. These businesses attracted workers to settle in the area. The nearby streetcar line provided them with access to relatives, goods, and services that were closer to the city core.

From the northern portion of the District south to Chippewa Street, the area outlined by heavy black lines in the lower central area of Figure 8 reflects the level of public transportation provided to the District at the beginning of the decade.

The railroad tracks in the Mill Creek Valley were primarily responsible for restricting the development of a network of streetcar rails; because the railroad and streetcar tracks could not intersect, the streetcar rails required a viaduct to cross over the railroad lines. As a result, by 1875, the area west of South Jefferson Avenue and south of Gravois Avenue had spotty development, while the area east of South Jefferson Avenue had fairly dense housing. The area south of Chippewa Street, in particular, remained rural with farms, dairies, orchards, and grape arbors. Even in 1908, there were still at least fifteen dairies in the area, indicating an incomplete transition from a rural past.  

These are important factors that affected growth in the area and the way subdivisions progressed in the District. In the period before 1854, for example, the only subdivision in the District, Laclede’s, was

---

15 This count was from 1903, 1908, 1909 area Sanborn Fire Insurance Maps.
platted in 1846 on Jefferson Avenue between Wyoming and Utah Streets. Dry's 1875 *Pictorial St. Louis* again confirms visually that little is in Laclede's subdivision despite nearly thirty years with a recorded plat. In the greater area, one can see sink holes, patches of housing, and empty space with meandering roads rather than the streets platted in 1838.\(^\text{16}\)

\[\text{Figure 9: Laclede's 1846 Subdivision, Shown in 1875}\]
Camille N. Dry, *Pictorial St. Louis*, plate 35

Despite the number of plats recorded by 1875, *Pictorial St. Louis* conveys a rural character and feeling. Gravois Avenue was an important farm-to-market road, but there was only a short section of a streetcar line on South Jefferson Avenue. A small number of housing areas were scattered over the District with a few pockets of density. For example, in one area along South Jefferson Avenue between Miami and Winnebago Streets, Lutherans established the Concordia Lutheran Seminary in 1849. Built by Germans from Saxony as a religious center for the education of ministers, they also constructed Holy Cross Church in 1867 and a printing plant.

While this enclave is associated with the church and was established prior to working-class and middle-class residential development associated with the streetcar, there is little evidence that the presence of the church actually stimulated or enhanced the way community planning evolved in the District. The church was, however, an important institution that served the German-speaking population living in another neighborhood – Benton Park – across South Jefferson Avenue to the east. This appears to be true for the District with regard to other mostly self-contained institutions erected before the advent of residential subdivisions. The Alexian Brothers Hospital, now a large and dominating modern complex on South Jefferson Avenue, dates to 1870. St. Anthony’s Hospital began in 1873 in Carondelet, but the Franciscan Sisters moved the hospital to 3520 Chippewa Street in 1900. The order completed a convent in 1924, but the medical center and convent no longer stand. The Home for the Friendless, a private home for elderly, impoverished women founded in 1853, occupied a vacated Swiss Protestant College located on South Broadway and Osceola Streets. Marysville College of the Sacred Heart had a campus bounded by Osceola and Meramec Streets and Minnesota, and Nebraska Avenues. Buildings associated with this boarding school academy no longer remain. Other institutions erected prior to suburban development were Our Lady of Perpetual Help, a rest home at 3439 Gasconade Street, originally built in 1858; the Little Sisters

of the Poor home for the aged, established at South Grand Boulevard and Cherokee Street in 1900 and dates from the period of significance.

**The Spreading Metropolis**

The District is one of the numerous first-tier suburban areas that emerged during the era of the “Spreading Metropolis” in South St. Louis. These were the urban neighborhoods for more moderate-income residents within the city limits, but located several miles away from the city’s historic downtown. In addition, while a number of physical and economic factors delayed rapid growth and frame the District’s history, it eventually filled with residential housing for middle- to lower-income residents, many of German descent.

In 1880, St. Louis was a divided city with neighborhood residents that tended to share economic position and ethnic origin or a mixture of both. By 1880, the town’s population of 350,518 included 54,901 German-born inhabitants.\(^{18}\) Immigration reached a peak in 1882 as an industrial depression and a desire to escape military service prompted their continuing departure for the United States. Incoming Germans continued to live in the sections where the immigrants who had arrived before the Civil War had settled, although they settled in all wards. They lived with other nationalities interspersed among them. As the city began to grow west, many residents of a ward followed new subdivision development and moved outward into them from the city center. With residents generally moving west in a fan shape, middle to lower working-class residents populated the District.

In the 1880s, the District was in the Twenty-First Ward and the northern part of the Twenty-Second Ward. Of the Twenty-First Ward’s sparse forty-two hundred residents, one in every four was German-born. Within the Twenty-Second Ward, about 17 percent of the residents were German-born.\(^ {19}\) This ward was more sparsely settled that the Twenty-First Ward, with a large number of farmers still engaged in agriculture.

\textsuperscript{21} Olson, 48.
According to Audrey Olson, who researched the German presence in St. Louis extensively, those who migrated into the District came as part of a natural expansion to the west from a concentration in the older river wards. Germans who settled in the Twenty-First Ward (outlined in Figure 12) and the Thirteenth Ward (see Figure 12), moved west out of the Fifth, Seventh, and Ninth Wards as they were established in 1880 (starred in Figure 12), the area where many previously lived in boarding houses and shared living conditions. A sample of the occupations of those who moved showed that most were laborers or craftsmen moving into the Twenty-First Ward and mostly craftsmen moved into the Twenty-Second Ward. By 1910, the number of German-born immigrants decreased from about 15 percent of the population to about 7 percent. The District now contained first- and second-generation Germans in numbers greater than or almost equal to native-born inhabitants with native parentage.

While it is sometimes assumed that ethnic self-consciousness or cultural associations caused groups to remain situated within areas, Germans in St. Louis did not necessarily fit this assumption. They were highly mobile between 1910 and 1914, with at least one-third of all Germans moving, and many doing so more than once. Although most people residing in the District at the turn of the century came from other German residential areas on the South Side, every class of German and German-Americans moved in a pattern similar to and simultaneous with, other native American-born residents moving westward from the city’s core.

Furthermore, although Germans immigrants lived in the District in large numbers, ethnicity does not appear to have played a strong part in a determining a particular “German” character in the District. This was due, in part, to the diversity within the German immigrant community. Important institutions such as churches, which sometimes tie ethnic groups together through language and religious preference to traditional pasts, provide little evidence of a particular German enclave in the District. The churches in or near the District reflect the variety of cultures of the Germans who came into the area, as well as the presence of other ethnic groups. These churches (some established quite early in the District even prior to significant settlement) served various faiths within Benton Park to the east and the working-class neighborhoods to the west, which include those in the District. Their diversity reflects the needs of the diverse population that frequented them.

- Holy Cross Lutheran — German-speaking Lutherans; established in 1858 on South Jefferson Avenue.

- St. Anthony of Padua — German-speaking Catholics; located at Meramec Street and Michigan Avenue; established in 1863 by Franciscan Fathers, the church was completed in 1869.

Gravois-Jefferson Streetcar Suburb Historic District  
St. Louis (Independent City) Missouri

- St. Thomas of Aquinas — Serving English-speaking Catholic members of St. Anthony's parish who originally worshiped at the Alexian Brothers Hospital established in 1870, the church at Osage Street and Iowa Avenue dates to 1883.

- Lutheran Church of Our Redeemer — English-speaking Lutherans formed the congregation in 1892. This group first worshipped at a chapel at Juniata Street and California Avenue in 1897, and moved to Utah Street and Oregon Avenue in 1901 even though the area was still sparsely settled. The present church dates to 1908.

- Winnebago Presbyterian — German-speaking Presbyterians established the church as a mission of the First German Church in 1897. The church formally organized in 1902 at Winnebago Street and Tennessee Avenue. Development of the area surrounding this church occurred after the 1904 Louisiana Exposition. The present church dates to 1910.

- St. Matthew's United Church of Christ (German Evangelical) — German-speaking congregants organized the church in 1875. The church building located at Potomac Street and South Jefferson Avenue dates to 1888.

- St. Wenceslaus — Bohemian Catholics erected the church in 1895 at its present location at Arsenal Street and Oregon Avenue.24

**THE LATE NINETEENTH CENTURY DUTCHTOWN LANDSCAPE**

Residential growth and commercial activity continued to increase slowly in the District during the last twenty years of the nineteenth century. In the 1870s, the area had a large population of farms and dairies. In 1875, horse-drawn streetcar lines ran on South Jefferson Avenue and along Gravois Avenue as far as Arsenal Street. Another line ran west on Arsenal Street to South Grand Boulevard.

In 1880, in the area running south from the junction of Gravois and South Jefferson Avenues to Chippewa Street, there were four groceries and six saloons, indicating the lack of commercial development. The 1883 Hopkins Atlas shows about 650 structures in the District at that time, one-half of which were outbuildings. Most were along South Jefferson, Gravois, California, and Ohio Avenues and Chippewa, Arsenal, Keokuk, Gasconade, and Cherokee Streets, all of which had streetcar lines or were within several blocks of streetcar intersections. The establishment of a cable streetcar line on South Broadway Street in 1885 was a significant event. The east-west streets of Arsenal, Cherokee, and Chippewa Streets (all of

which had streetcar lines by 1890) as well as Miami Street were important for the flow of traffic west from Carondelet Road because there were few other ways to reach the west side of the city directly from the east. A commercial nucleus, stimulated by wagon trade and horse-drawn streetcars existed at this time at South Grand Boulevard and Gravois Avenue, with construction along Gravois Avenue to the east.

In 1883, the only industrial sites of note were a lumberyard and the Cherokee Brewery. This had little to do with any lack of industrialization in St. Louis; rather by 1880, St. Louis had all the characteristics of a commercial-industrial complex as tobacco, dress manufacturing, furniture making, book publishing and job printing, boots and shoes, and lumber products led the city’s production. There would never be heavy industry in the District, however, because pollution was already a problem in the city and the board of health tried to control the nuisances creating the pollution. Not as concerned about real health issues as they were about pollution’s effect on property values, the southern part of the city became an unacceptable area for any pollution-creating industries because the southerly summer winds would spread any airborne stench over the rest of the city.

As noted in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs,” development in South St. Louis had as much to do with the ability to finance construction and provide mortgages as it did with other factors. The populating of subdivisions depended on speculative developers to provide the initial capital for homeowners to purchase property and construct houses. In an area populated by Germans, it is not surprising that they as well as older families and native-born Americans were active in the development of the District. Three Germans exemplify the different types of landholders subdividing in the District. Lorenzo E. Anderson subdivided blocks 1571-1574 in 1890. Anderson was typical of a large community builder and was on the board of directors of Guaranty Trust Company, which consolidated title investigating firms. He also helped establish the real estate department of the Mercantile Trust Company. Henry Elbreder, a truck farmer, was a small subdivider and platted Elbreder’s Subdivision in Block 1619 around his home in 1875. Theodore Hemmelman was a real estate agent and platted his subdivision in 1898. The variety of landholders subdividing in the District is indicative of a land development community that had loosened considerably from its earlier

32 Kargau, 134.
highly defined character to include a range of individual developers that more closely resembled the population of the area at large.

EARLY TWENTIETH CENTURY DUTCHTOWN DEVELOPMENT

Beginning in 1887 and continuing in the early 1890s, the electrification of streetcars had a tremendous impact on public transportation. Within the District, South Jefferson Avenue and South Grand Boulevard, as well as Cherokee and South Broadway Streets were the first to have electric trolleys. By 1910, electric powered streetcar lines reached new parts of the District along California Street and the southern part of Gravois Avenue. The added streetcar transportation was important for the residents living in the area and stimulated development into the 1920s. The increasing number of housing starts increased the demand for easily accessible goods and services so that as early as 1910 there were twenty-three saloons and forty grocery stores along the more traveled streets. On Gravois Avenue, there was a planning mill, brewery, and lumberyard. Commercial facilities clustered at intersections and along more heavily traveled routes are typical of such neighborhoods with increasing population.\textsuperscript{33} Heavy black lines in the lower central area of Figure 13\textsuperscript{34} outline the general area of the District as far south as Chippewa Street. The north-south streetcar lines on California and Oregon Avenues continued farther south through the District, as did the lines on South Grand Boulevard.

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{Figure13.png}
\caption{1910 South St. Louis Streetcar Lines}
\end{figure}

\textsuperscript{34} Sandweiss, \textit{St. Louis: The Evolution of an American Urban Landscape}, 124.
The 1903-1908 Sanborn Fire Insurance Maps show small businesses in the District such as drug stores, bakeries, greenhouses (many of which had been left from the nineteenth century truck farms), a few coopers, laundries, two small sausage factories, overall and broom factories, and liveries. The 1907 city directory listed thirty-four dairies still operating in the area, particularly in the southern portion of the District that did not have active streetcar lines. The presence of meeting halls and social clubs, both of which were found in portions of the District at this time, was one indicator of a settled area rather than of a developing one. A remaining social facility, the Turnhalle at Ohio Avenue and Potomac Streets, dates to 1899 and was one of the city’s German Turnvereins (or athletic and social clubs).

In general, by 1910, residents moving into the District’s newer residential areas knew the kind of neighborhood it would be — that it would have a distinct character different from older parts of the city and that it would offer a common sense of identity to a group otherwise notable for its diversity. When the District became fully developed in the late 1920s, it reflected the layers of community development that evolved from the city’s planning decisions and the evolution of its public transit system. The buildings in the District reflect these layers that include colonial ownership of wealthy landholders and of the city of St. Louis; the sale of the Commons and its transfer into public ownership; the division of the space into typical American grid city sections; and city and private investors’ decisions about public transportation, the location of industry, and infrastructure development.

A 1919 city map (Figure 14) shows the east-west cross streets and South Jefferson and Gravois Avenues lined with small amounts of business and industry, but the area by this time was largely residential.\(^{35}\) One

---

\(^{35}\) Ibid., 160.
favorite rural spot in the District was Cherokee Garden, a public garden at Cherokee Street and California Avenue with a reputedly excellent kitchen and picnic areas.  

During the period from 1910 to the entry of the United States in World War I, new buildings continued to be built in the District. The restriction on imported building materials during the war and the fear of inflation after the war slowed housing starts. By 1920, residential development increased, including a period of active development of apartment buildings that continued until the early 1930s. The expansion of the city’s streetcar system in the South Side by the 1920s reflects the continuing role of public transportation on suburban development. Within the District, considerable residential development continued, particularly in the area south of Osage Street.

RESIDENTIAL NEIGHBORHOODS

The District is important in the history of St. Louis suburbanization because it is a series of working-class neighborhoods that developed along streetcar lines that retains a high degree of integrity and reflects a variety of modest single- and multi-family, working-class residential building types and styles that evolved in St. Louis during the late nineteenth century and the early decades of the twentieth century. These dwellings reflect types of housing that met working-class family needs.

Due to interrelated land use patterns, architecture, and landscape features, the District’s appearance is different than that of older residential neighborhoods in the city’s historic core. Moreover, the major

36 Ernst D. Kargau, The German Element in St. Louis, ed. Don Heinrich Tolzmann, trans. William G. Bek (Baltimore, MD: Clearfield Press, 2000), 152. Kargau’s book was originally published in German as St. Louis in Former Years: A Commemorative History of the German Element, which was published in St. Louis in 1893.
thoroughfares that form the District’s boundaries, visually and historically separated it from other adjacent residential neighborhoods on the east and the west. This separation and the District’s shared topographical conditions determined a temporal period and pattern of development that is different from that of adjacent neighborhoods. And, although the District has many functional and architectural building types found in other working-class neighborhoods, the mixture of these building types—the inclusion and exclusion of certain types, as well as their patterns—reflect a distinct sense of place that is subtly different yet discernible from other contemporaneous working-class suburbs in the surrounding area. For example, many of the plans and architectural treatments found in the survey area are similar to those found in Forest Park Southeast and Tower Grove, yet there are discreet differences (lot size, density, number of two-family versus four-family residences, location of commercial nodes, etc.) that create a definitive sense of place.

The District is overwhelmingly a multi-family residential enclave with a visual unity created by buildings erected for similar costs featuring streetscapes of uniform lot sizes, set-backs, heights, scale, and materials. The repetition of architectural styles and the craftsmanship of the masonry construction and ornamental detailing provided further visual continuity. The vast majority of the residential buildings in the District were variations on recurring architectural themes, including detached single-family houses, row houses, townhouses, multi-family flats, multi-family walk-ups, and several low-rise apartment buildings. With the exception of one-story and one-and-a-half-story “shotgun” folk house forms (which extend from the late nineteenth century through to the 1950s HUD-financed designs), the majority of the survey area’s residences are two-story buildings with two- or three-bay façades. The height of the buildings has direct associations to their period of construction and reflects the fact that before the creation of zoning ordinances after World War I, there was a height limitation of two stories for residential structures. The exception to the rule is the three-family “triple deckers” townhouse variant that has a third flat in the attic area incorporated within a Mansard roof form. All have narrow fronts and long side elevations in keeping with the narrow lots. In St. Louis, the use of brick as a predominant residential building material dates back to the 1850s when a fire destroyed blocks of buildings and caused millions of dollars in damage. After that, the city required masonry construction of its buildings. Before the advent of zoning and building codes in the twentieth century, property deeds in many new developments in the city required masonry construction. Consequently, the District as a whole visually conveys feelings of a finite time period and has direct associations with the preponderance of brick structures dating from the mid-nineteenth century that shaped the city’s appearance in the late nineteenth and early twentieth centuries.

As documented in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs,” the architectural styling for even the simplest of the residential buildings was closely aligned with the prevailing architectural styles of the day and the buildings in the District represent a typical cross-section of styles found in the late nineteenth and early twentieth century in Midwestern communities. Identified
by their plan and form, the vast majority of these buildings feature little if any academic architectural styling. Even the larger buildings, whose ornamentation strongly alluded to a specific architectural style, had simple treatments.

A common design motif that runs through the District is the use of dark brick walls, elegant brick corbelling and ornamentation, and contrasting light limestone foundations, sills, and belt courses. In restrained ways, these buildings also reflect new technologies such as the mass production of brick, cut stone, pressed brick, plate glass, and turned, cut, and pierced wood, which local contractors and craftsmen used to create a subtle but rich effect on the streetscapes of the working-class houses in the District.

Three roof types dominated the residential architecture of the District. During the late nineteenth century, builders of working-class housing adapted the Mansard roof of the Second Empire style to their residences. The double-pitched roof, usually covered in slate, featured a flat upper slope and steep lower slope that terminated at the cornice. The design often incorporated dormers in the steep roof. Most were not true Mansard roofs. The adaptation of the Mansard form to working-class residential buildings created a third attic story that extended a short distance toward the back of the building; enough to create additional space in an era that restricted residential building height to two stories. In addition to this treatment, many of the flat roof buildings featured mansard-like roofs applied to the parapet area. Another popular residential roof form was a shaped front parapet, which enjoyed great popularity between 1900 and 1920. A distinctive feature of the shaped parapet design was the use of corbelled parapet towers at the end bays, a decorative band of corbelled brickwork cornice as its base, and the use of decorative terracotta or glazed bricks to reinforce its shape. The shaped parapet was common among buildings with Late Victorian and Revival style references; the earliest have recessed entries and Romanesque Revival details, while later versions featured a small one-story entrance porch. The gable front roof type appeared after the turn of the century and, with the shaped parapet form, dominated roof forms in the early twentieth century. The almost universal use of these forms reinforces the cohesiveness of the District.

During the District's initial period of development, indoor plumbing, central heating, electric wiring, and gas stoves not only changed the lives of its residents, they also changed the room configurations. Room arrangements now oriented the kitchen toward the rear of the house with other private spaces and opened the more public spaces to light and views. As the privy and the barn for horse and dairy cow disappeared, the backyard featured some amenities such as gardens and a seating area near the coal shed and clothes line. By the end of the first decade of the twentieth century, building permits for the demolition of wooden sheds and the construction of brick garages began to appear. At the same time, building permits for new residential units include detached garages located along the alleys. The size of these ancillary units reflects the size of the residential buildings for which they were built. Detached single-family houses have small one-bay garages; two-family flats have two-bay garage buildings; four-family flats have
parking structures to accommodate four cars. Like their predecessor, the carriage house and barn, they are oriented to brick alleys that bisect each block.

COMMERCIAL NEIGHBORHOODS

Commercial buildings and the streetscapes they create define both the functional and visual character of the District’s neighborhood commercial enclaves and include the property types documented in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs.” Commercial buildings found in the District consisted of two basic forms — the one-part commercial block and the two-part commercial block. The one-part commercial block buildings in the District are one story in height and generally housed one or two businesses. Their simple architectural styling emphasized the storefront window glazing and typically featured a shaped parapet or faux mansard roof, a corbelled brick cornice, date or name panels below the cornice or in the parapet, and brick laid in decorative patterns. The two-part commercial block buildings are typically two to three stories in height and there is a clear visual separation of use between the first-story vending space and the upper-story office, meeting room, or residential uses. Styling on the first story focuses on the display window glazing and door design. Design of the upper stories identifies the building’s architectural influences. Many of the corner buildings have connected residential buildings of the same style that face onto the secondary street. Some of these residential units run the entire length of the block.

A high percentage feature high style designs creating artistic fronts. Most corner buildings rise to three stories. Depending on their location, they usually reflect the style, materials, and architectural treatments of the adjacent residential neighborhood. The traditional nineteenth and early twentieth century building material is dark red brick, while buff-colored brick appears in some buildings constructed during the early twentieth century. Due to their functional nature, many exhibit restrained architectural details. The most important design feature is the storefront, which incorporates display windows, signs, doors and entablature, transoms, bulkheads, and posts.

ARCHITECTS/BUILDERS AND DEVELOPERS

As documented in the MPDF “South St. Louis Historic Working- and Middle-Class Streetcar Suburbs,” most dwellings were not architect designed, but reflected local vernacular building traditions and were the product of consultation of the developer, contractor, and master mason. Because of the limited number of architect/builders listed in extant building permits, it was not possible to ascertain substantive patterns relating to specific architects and/or builders throughout the District. Building permits, however, identified sufficient numbers of architects and/or builders to provide some general information. At most, the documentation showed that the largest number of properties developed by one individual/concern was approximately twenty; most erected over a five-to-ten-year period. Most buildings were the work of
small-scale developers who erected buildings over a decade or longer. In a few instances, a particular developer erected dwellings on an entire block during the same period of time. With the exception of individuals who hired local contractors to erect buildings in the district, the majority of the buildings were part of speculative efforts.

Gravois-Jefferson Streetcar Suburb Historic District
St. Louis (Independent City) Missouri

GEOGRAPHICAL DATA

VERBAL BOUNDARY DESCRIPTION

The boundaries are indicated on the accompanying scaled base map.

BOUNDARY JUSTIFICATION

The boundaries include all of the historic residential, commercial, recreational, cultural, and landscape resources that retain historic/architectural integrity and have associations with the development of streetcar suburban neighborhoods in South St. Louis in the late nineteenth and early twentieth century. The boundaries are drawn along historic street, alley, and lot lines that reflect the District’s historic grid system and along historic commercial corridors according to a change in visual character due to a decline in the concentration of contributing resources.

The boundaries clearly reference significant portions of thoroughfares that visually and historically defined the District. The District’s neighborhoods and commercial enclaves evolved in a causative physical relationship to these pre-existing thoroughfares. Gravois Avenue, South Jefferson Avenue, South Broadway Street, and South Grand Boulevard are major arterial streets and historically served as a wagon, streetcar, and automotive transit corridors. Meramec Street is a major collector street with mixed commercial, institutional, and residential use that creates a visual change delineating the District. The change in the grid system south of Meramec Street reflects different development patterns and associations as well. The eastern edge of the project boundary, which runs parallel to South Jefferson Avenue/South Broadway Street, has the greatest loss of historic/architectural integrity and does not relate to the east side of South Jefferson Avenue. Moreover, South Jefferson Avenue is the western boundary of Benton Park, a National Register District that contains different socio-economic property types and development patterns. Similar non-historic intrusions along Gravois Avenue/South Grand Boulevard create a distinct change in visual context. The widening of these arterial streets further delineates the historic residential neighborhoods in the District. In developing the boundaries, the following determinations were made.

- No definitive boundaries can be drawn based on visual divisions based on a decline in the concentration of contributing resources except along the selected major arterial and collector streets. Where there are small clusters of non-contributing resources scattered through the District, these areas are completely surrounded by a high percentage of eligible resources.
• Based on GIS mapping of the survey data, no definitive boundaries can be drawn based on enclaves of particular functional property types or architectural styles, dates of platting/construction, or architect/builders.

• No boundaries can be drawn based on property types with significant historic associations with different historic contexts/themes. All of the functional property types within the District boundaries – residential, commercial, social, recreational, and cultural – are property types associated with early suburban neighborhoods. Thus, they all share the same historical, contextual, and visual pattern of historic development.

The size and composition of the District as it existed historically and as it is currently delineated by the proposed boundaries meets the National Park Service definition of a historic suburb. Its composition as a District visually communicates (1) its historical connection to the city “by one or more modes of transportation”; (2) that it was “subdivided and developed primarily for residential use according to a plan”; and (3) by virtue of the number of intact resources it possesses, it contains “a significant concentration, linkage and continuity of dwellings on small parcels of land, roads and streets, utilities and community facilities.”
