42. FURTHER DESCRIPTION OF IMPORTANT FEATURES An iron-balustered, open porch with a deck for the second floor marks the entrance to this school; ironwork of this kind is seldom seen on the St. Louis public schools. While the porch is obviously quite old, it is difficult to tell whether or not it is original. Because two of the second-floor windows are lengthened to allow easy access to the deck/balcony, it is tempting to assume that a porch of this type was always there; however, this alteration could have been made at the time the ironwork was put in place. The porch covers an elliptically-arched (stone) doorway of the (over)	26. LOCAL CONTACT PERSON OR ORGANIZATION	39. ENDANGERED? BY WHAT? YES () NO (X)		
43. HISTORY AND SIGNIFICANCE A two-story school building appears on the 1875 Compton & Dry map in the location of this school with the name "School of the Freie Gemeinde of North St. Louis." The 1870 School Board Annual Report says that the Dodier School has been rented to provide extra school rooms; the October 25, 1870 Official Proceedings of the Board says that a four-room addition will be made to the rented building and a lease will be signed for 20 years beginning in February 1869, so evidently the name on the building in Compton & Dry is outdated. At about this time, the School Board became committed to providing German-language education in the public schools. The building shown on the Compton & Dry is the same as appears on the 1883 Hopkins Map of St. Louis; however, this building is not the same as the one on (Over)	27. type commonly found on residences of this area (Columbia Brewery District, Hyde Park, Old North St. Louis). Elliptically-arched windows at the first story have stone keystones; the 6-over-6 windows have transoms and stone sills. Second-story windows have round blind arches with stone keystones and sills; the narrow, long windows are horizontally divided into 2-over-2 double-hung sash with a similarly divided transom. The corbeled cornice has a center gable featuring a half-round window at the attic. A stone water table encircles the building, which has playground pavement from sidewalk to building rather than lawn area. A 1950 addition, visible to the left in the photo, is one story high with flat roof and elliptically-arched windows with stone keystones and sills.

#43 the site today. Directory listings show continuous use of the site as a public school through 1902. A building permit for a "2-story brick addition to school" for \$9,000 in 1883 is probably the point at which the building achieved the look it has today. It is surmised that the original building was "swallowed up" by this addition, quite expensive in its day for a mere addition. The building was evidently vacant during 1903 and was then occupied by the German School Association Free Community as Dodier Hall from 1904-1946. Since that time, the building has been occupied by the Neighborhood Association, a settlement house organization, which added the 1950 addition.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES Doubled stone stringcourses mark the divisions between the stories of the main building. Elliptically-arched windows appear at the third story; these are 6-over-6 double-hung sash, as are the rest of the windows of the main building. First and second story windows are round-arched. A bracketed wooden cornice and pediment distinguish the school and a corbeled chimney adds roofline interest. Attached to the school is a 1911 one-story auditorium and gym (it should be noted that there are no 1911 building permits for this school and the nearest permit date is 6/23/13 for a \$19,306 alteration; (over)

5. OTHER NAME(S)

43. HISTORY AND SIGNIFICANCE Irving School was built to help accomodate the burgeoning German population of the Hyde Park area. The Irving Kindergarten is one of only three (Ames, Blair) surviving detached kindergartens in the city. The school was named for novelist Washington Irving (1783-1859). School is one of 16 slated to be closed within the next two years.

------------------	----------------------

IF ADDITIONAL SPACE IS NEEDED, ATTACH SEPARATE SHEET(S) TO THIS FORM

School Board records give the 1911 date and nothing for 1913, so there may have been some sort of delay in recording the permit or in getting the actual construction done; building permits also show a 5/19/19 \$16,000 permit not mentioned in school records) The one-story gym/auditorium section (see second photo) features modest decoration primarily in the form of intricate herringbone brick corbeling below a stone string course at the cornice on the front elevation and returning to include the first bay of the exposed side elevation. Pilasters divide the four top-hinged windows of the side elevation, while the front elevation with its three windows of paired 4-over-4 top-hinged windows is unrelieved. The section has a flat roof and ashlar limestone foundation. The 1894 Kindergarten section is attached to the side of the gym/auditorium and is two stories high. A small tower rises at the corner adjoining the gym/auditorium wing; it has a dentilled cornice and four tiny round-arched windows that form a miniature arcade are joined by a stone surround connected to a stone string course. The words "Irving Kindergarten" appear in stone below the arcading; a rectilinear window and undistinguished, apparently altered, entrance are below the name. The body of the kindergarten building features an ornately corbeled brick cornice of a different design than the gym/auditorium and represents some very fine craftsmanship. Kindergarten windows are variously divided and have evidently been replaced at times over the years; one 9-over-9 double-hung sash window remains at the lower left corner. Windows are rectilinear with the exception of two round-arched windows on the second story. Simple but finely crafted details of brickwork (recessed panels, arches, pilasters, etc.) distinguish this school. The roof of the kindergarten is hipped but truncated; the complex is almost right on the sidewalk, as were most of St. Louis' early schools (as differentiated from the later models, such as Ittner's, which are set back on spacious lawns).

double-hung sash in groups of five. Overhanging eaves are highlighted by large wooden brackets. The lot upon which the school was built slopes steeply downhill to the right (as viewed from the front), giving a split-level effect when viewed from the north (right side). An original short iron fence encloses the property.

*(see drawing, over) While the Sanborn map from which this drawing is taken designates only the right-hand wing as a 1934 addition, there is a likelihood that both wings were added at that time. School records indicate only that 4 rooms were added; other hand-written files in the School Board Archives indicate that 6 were added.

window at the second floor with an elongated round-arched entrance below it. This features a heavy stone hood molding; a small triangular pediment defines the actual door within the large arch. The same arch is repeated across a flat-roofed one-story-plus-raised-basement inset that connects the entrance bay to the western wing; four arches with casement windows appear at the first floor. Above them, a short brick wall bears a stone inset panel inscribed with the name of the school. Behind the wall, a quasi-half-timbering design appears at the eave on the second story; half-timbering is also used to face the double-windowed dormer on the side elevation. Small secondary entrances on the sides have shed roofs supported by huge wooden brackets. A short, original iron fence with stone posts encloses the property.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES A narrow, gabled pavilion marks the primary entrance to this school. A recessed entrance features an elliptical arch below a stone-coped gable engaged, stone-trimmed brick pillars provide support. A Gothic-arched window in the gable has been bricked in but is still visible in outline. Slanting brickwork is used in the peak of the gable of the pavilion and the peak over the doorway and as a string course on the first story of the main building. Elliptically-arched windows are arranged in threes, with the center window being larger than the others. Windows are double-hung sash, usually (over)

43. HISTORY AND SIGNIFICANCE Named for George Washington Carver (1864-1943), a slavery-born scientist. Cost of 1889 addition: \$19,000. School is one of 16 ordered closed by court order. The building is located across N. Channing from Vashon High School.

4-over-4, and have stone sills. Inset pressed-brick string courses appear at the second-story sills and near the tops of the second-story windows, as well as at intervals across the entrance bay. Brick corbeling adjoins a molded metal cornice for a bracketed effect. An 1889 addition appears to be that portion to the right of the recessed bay in the photo; it matches the design of the main part of the school very closely.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The design of this school, though not a PWA project, reflects the Depression era of its construction. Starkly functional, the five-story school is largely glass-walled with tripartite, top-hinged windows in groups of four, separated by brick pilasters rising the full height of the building. A stone sting course connects the stone capitals of the pilasters at the cornice, and the groups of windows have stone sills. Deco-style brick panels relieve the pilasters at the fifth floor. The Bell Avenue entrance features a heavy elliptically-arched stone hood flanked by paneled columns (over)	36. 43. HISTORY AND SIGNIFICANCE Originally the Herbert S. Hadley Technical High School, this school became Vashon in 1963, named for educators George B. and John B. Vashon. Sanger's plan for the school cost \$1,665,919, a high cost per pupil for the time. A 1953-54 addition to the side of the school (out of the photo on the far left; connecting portion and parts of each are visible in the second photo) echoes only the flat roof and pilastered bay divisions of the 1931 part. School Board records and Milligan's obituary indicate that he was involved in designing a school when he died in 1929, and some school records flatly credit him with the design. Sanger's name is on the cornerstone, however, and the design is much more akin to his standard work than to Milligan's.	44. DESCRIPTION OF ENVIRONMENT AND OUTBUILDINGS	RANGE

that are topped with stone spheres. On the sides and rear of the building, the concrete superstructure is visible and the building takes on the appearance of a warehouse (Photo #2). Connected by a two-story hallway to the old building, a 1953-54 addition of buff brick continues west on the Bell Avenue elevation (Photo #2). It is fairly typical of 1950s St. Louis school architecture: flat roof, buff brick, large unrelieved surfaces vs. large areas of glass brick windows. The pilaster theme of the older portion is repeated, perhaps intentionally. The recently closed Carver School is located across N. Channing to the east.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school is unlike Kirchner's other schools (see Benton, Charless, et al) in scale, design and ornament, possibly due to the fact that its construction coincided with the Depression of 1893. Little more than a centered brick and terra cotta pediment distinguish the building from the surrounding residences of the same era. A corbeled brick cornice beneath a stone string course provide the building's only other ornamentation. Segmentally-arched 6-over-6 double-hung sash with stone sills are boarded up at the first story and basement but open above. The school is sustaining (over)

43. HISTORY AND SIGNIFICANCE School was named for C. H. Howard (1846-1902). Building permits show two additions to the school: 7/31/02, alter and add to school for \$15,298; 7/13/05, addition to school, \$32,400.

damage rapidly as a result of the open upper windows, as birds and vermin and weather all do their part to damage the building. A short iron fence with iron posts still encloses the property. Unlike Ittner's buildings to immediately follow, the school is located almost directly on the sidewalk, with a paved playground behind the building.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school is of very simple design with a minimum of fussy detailing. Two forward-facing wings flank the school, each with a narrow row of windows at the attic story. Many of the transomed windows that are now 2-over-2 double-hung sash or 1-over-1 were possibly 6-over-6 of the style still in the first floor. Windows have stone sills and no arches of any kind. The gabled center block features a segmented half-round window; entrances flank this center block and consist of large round pressed-brick arches. Brick corbeling appears between the third and attic stories, a red sandstone sill (over)

43. HISTORY AND SIGNIFICANCE School records indicate that the name comes from Arlington, VA. Original cost: \$54,000; 1925 alterations: \$30,000. School is one of sixteen ordered to be closed in the next two years.

course enhances the second floor, and a very simple red terra cotta cornice graces the attic story. A stone string course tops the corbeling at the sill level of the attic. Pilasters flank the window in the gable. The whole is above grade and reached by a flight of stone steps. An original short iron fence defines the lawn. Building permits show an alteration in 1917 for \$1,053 and a major alteration in 1925; the wing that projects to the rear of the property is probably the 1925 alteration, although it is not so noted on the Sanborn maps.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES Carr Lane School is one of the four earliest extant public school buildings in St. Louis. Nearly identical to Carondelet School (1871), Carr Lane features the round-arched first and second story windows common to the other early schools; although all the openings are boarded up, the compound brick arches still give wonderful definition to the building. First-story windows have stone sills and second-story windows have a stone sill course. Third-story windows are segmentally arched with stone sills, but the original size of the windows is visible in patched brickwork below; (over)

43. HISTORY AND SIGNIFICANCE Named after William Carr Lane, first mayor of St. Louis. This school is located in St. Louis' near North Side in an area of high demolition, not far from the demo site of the infamous Pruitt-Igoe housing project. The area is tentatively scheduled for redevelopment, and although school records note that the building is to be "sold for housing," it is likely that the building will be demolished in the course of time. Building permits show an Ittner alteration in 1900 for \$3,890, almost certainly the segment of the building that lies at a transverse angle to the school.

perhaps the building originally had a limestone sill course at the third story similar to that of Carondelet. The projecting entrance pavilion is pedimented and modillions encircle the building at the cornice and embellish the pediment. The entrance is centered and is a larger round arch that blends with the windows; it features a transom bar of stone.

Parts of the cornice are missing and/or deteriorated, part of the pediment has for some reason been altered with wood and some of the boarding is missing, allowing the elements to enter; the building, however, does not appear to be beyond redemption at present. A chain link fence surrounds the property and the isolation of the area does not seem to lend itself well to the usual types of vandalism, so perhaps the building will still be rescued.

of which the outer two have smaller arches within, ornamented with elaborate designs evoking the Byzantine style. Above the entrances, arcading supported by barley-sugar Corinthian columns forms an enclosed balcony. The round arches are filled with stained glass panes and intricate terra cotta designs frame the whole. The school is slightly above grade and surrounded by a low brick retaining wall in combination with an iron fence.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school differs from Kirchner's standard form (Charless, Benton, etc.); his use of buff brick to highlight arches and the usual sand-stone belt courses are missing from this school. The entrance was remodeled in the 1950s, after the school experienced a period of vacancy, making it difficult to tell exactly what the entrance bay originally looked like. It could have had the three round arches with Corinthian pillars, because close inspection reveals that the entire projecting block has been bricked over, not just treated to a narrow buff brick slab in the center. It is (over)		38. PRESERVATION UNDERWAY? YES () NO ()	7. TOWNSHIP
43. HISTORY AND SIGNIFICANCE The school was originally the Clifton Heights School; it became Mason School in 1919 and Mason Branch School around 1930. The school became vacant during the 1950s and was purchased in 1957 by Crest Electrical Company, who remain the occupants. They added the buff brick entrance bay during the late 1950s and have considerably altered the interior.		39. ENDANGERED? BY WHAT? YES () NO (X)

possible that this school was built to later receive an additional upper story or two, but the need failed to materialize. That the school was not needed, even during the elementary years of the baby boom generation, is shown by the fact that the Board of Education sold the building long in advance of overall decline in school-age population in the city. The flat-roofed building has rectilinear windows that have been modernized; a red terra cotta sill course, heavy terra cotta bracketed linear hoods and brick pilasters highlight them. Below the sill course, the brown brick is laid bossage-style for a rough effect, a technique often used by Kirchner. Basement windows have red brick jack arches. The building is located on a triangular plot that slopes downward in the rear, exposing much of the basement at the rear elevation. An ashlar limestone retaining wall at the sides extends to the rear of the property. Former openings, probably windows, on the sides of the projecting center bay have been bricked up.

curvilinear stone parapet ornamented with finials. Beneath the stone cornice of the entrance bay, vertical stone fillets form rectangular "openings" with a stone string course at their bottom terminus; this arrangement returns to run the length of the sides of the bay. Another stone string course encircles the building at the sill line of the third story, and another functions as the water table. Windows are in groups of five and are 6-over-9 double-hung sash types with stone sills. The overhanging eaves have wooden brackets. Four small dormers rise at the roofline of the primary elevation. Secondary entrance doors on the main elevation are covered with tiled roofs supported by very large wooden brackets. A short original iron fence defines the property and features stone-capped brick posts at intervals. An undetectable 1928 addition (probably the wings) added six rooms to the original nineteen; Sanborn maps fail to record where the division lies between old and new.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school combines elements of several styles, including Georgian and Romanesque Revivals and English School style. The Manual Training and Academy were two separate buildings with identical facades (despite the inadequate sketch above), originally connected by tunnel and later by an aboveground, three-story brick passageway. Each building features a pilastered block flanked by forward-projecting parapeted gables that feature round windows at the attic. Blind round arches top the third-story windows of 6-over-6 double-hung sash, grouped in triads; a corbeled brick sill course separates (over)

43. HISTORY AND SIGNIFICANCE Originally built by Washington University, the school was a private academy and manual training school for boys. Estimated cost of the school (both academy and manual training sections): \$275,000. The school was sold to the St. Louis Board of Education in 1917; it was used as a junior high or high school through 1948 (named for Ben Blewett, an Assistant Superintendent/Superintendent of the St. Louis Public Schools). The building was then used for the Harris Teacher's College (white counterpart of Stowe Teacher's College) until 1963. The school has since been a middle school and a middle "magnet" school, named for its location.

them from the windows below. Second-floor windows feature pressed-brick hoods and are also 6-over-6 double-hung sash, but, like those of the floor below, are in pairs. Most of the first-floor windows of the primary elevation of the Manual Training section are bricked up; these also have a corbeled brick sill course. Basement windows, also 6-over-6, are paired; the limestone water table acts as their sill course. Entrances are located immediately adjacent to the wings in slightly recessed bays and feature heavy compound round-arched hoods. A terra cotta cornice and terra cotta medallions at the third story further embellish the building.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES August H. Kirchner's schools all bear some resemblance to one another (see Grant, Benton, Charless, Froebel, Harrison), particularly in the use of round-arched entrances. Kirchner made extensive use of red sandstone and buff brick to trim his red brick schools. This school has a projecting, gabled entrance marked by triple round arches of buff brick with pressed-brick molding and center keystone. Short Corinthian sandstone pillars support the arches, the center arch of which is the largest. Transomed window (6-over-6 or 1-over-1) have buff brick surrounds. Red sandstone courses circle the (over)

43. HISTORY AND SIGNIFICANCE Originally named for first U.S. President George Washington; called Euclid after its location beginning in 1964. Cost \$22,000; 1902 addition by Ittner cost \$26,990; 1911 addition cost \$44,000 (source: building permits; school listings fail to mention the 1911 addition).

building at sills and lintels. Brick tourelles embellish the corners of the entrance block; they are capped and banded with sandstone. Here, as well as elsewhere on this school, the sandstone is beginning to spall rather badly. While the building is otherwise fairly well maintained, this deterioration could eventually cause severe damage to the building. The cornice is of corbeled brick. Chimneys feature inset fillets. The addition(s) to the building are in the rear and include a one-story multi-sided "drum" possibly used for a kindergarten. The building is fronted by a short iron fence with stone-coped brick posts.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school is dominated by an imposing projecting entrance bay flanked by paired fluted Doric stone pillars that rise two stories to support a pediment at the attic story. Stone is used extensively; the water table, cornice, coping, modillions, door surround, window sills and random trim are all of stone. Windows most often are seen in groups of five and are largely 6-over-9 double-hung sash; base-ment windows are single with rectilinear panes and the five windows (over)

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES As noted in detail with dates in #43, this school was built in parts, as the need arose. During the latter years of the 19th century, the School Board saw the need to build schools to accomodate rapidly increasing student populations; Riddick School is an excellent example of this procedure. School records show the school as having been built in 1870; we must conclude from viewing the school, however, that either the 1870 part was razed or it has been covered up in subsequent additions, because no part of it is visible today. The section farthest to the right in the photo is dated 1895 (over)

43. HISTORY AND SIGNIFICANCE School was named for Thomas F. Riddick (1781-1830), who secured school land grant. While school records indicate that there was a school on the site in 1870, no evidence remains visually of that building; it possibly still exists beneath later additions, however. The earliest reliable documentation for the school is an 1889 building permit for \$18,000 for a two story school. This was followed by a permit in 1893 for an

above the entrance, and the whole school seems to bear the mark of architect August H. Kirchner, designer of Benton, Charless, Montessori/Euclid and other schools of the 1890s. As the various sections were added, care was taken to match materials and major distinguishing features, such as the limestone banding found between the first two stories, at the lintel course of the second story front elevation, at the third story sill course, connecting arch imposts of third-story windows, and as the water table. First-story windows have stone lintels (primary elevation) and sills, and where round brick arches appear, stone imposts are employed. Every other block of the building was made to project, perhaps to minimize the visual effects of adding on. Cornices are copper (some missing) with brick corbeling. One dormer (visible in the photo) relieves the roofline, located on one of the recessed bays. All windows are boarded and/or bricked up, except for this dormer, which has three tiny 2-over-2 windows. A small pediment in the cornice of the center block bears the school's name in stone between two brick brackets below. Third-story windows are round-arched on the front elevation; all others are rectilinear. The entrances have elliptically-arched wood surrounds. One large brick round-arched opening in the left recessed bay appears to have originally been an entrance. An iron fence with iron posts encloses the property, which features no lawn. The slate roof of the building is damaged, particularly at the cornice, probably by thieves taking the copper. This has accelerated the course of weathering of the upper floor of the building, which has not been heavily vandalized at this point.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The school was one of Kirchner's Romanesque Revival schools from the days before the movement to "modernize" schools; Ittner attempted to open up the design somewhat. He retained Kirchner's detailing style and made judicious changes, probably because this was one of his first projects for the Board of Education. He later modified a number of Kirchner's schools in the same sensitive way. The facade of the school reflects the typical Kirchner look, using tripled round arches supported by short Corinthian columns at the second story (rather than the usual entrance treatment). Round arches (over)

43. HISTORY AND SIGNIFICANCE While at least one school listing gives the date of the school as 1894, a building permit for the site listed a "3-story brick school" for \$34,413 on 12/14/92. A permit for an addition to the school was filed 9/11/94 (\$1,000). Ittner's addition came 3/28/98 (\$19,000); an additional alteration came on 6/23/13 (\$11,400). These amounts, for the record, fail to total the amount listed in the nomination, which also does not mention the evidently substantial 1913 work. The school was named after one of the founders of St. Louis (and member of the first school board) Auguste Chouteau (1750-1829).

44. DESCRIPTION OF ENVIRONMENT AND OUTBUILDINGS

45. SOURCES OF INFORMATION St. Louis Board of Education Archives at Harris Stowe College; St. Louis City Hall records. (also see nomination by Carol Corey, 1986)	46. PREPARED BY Cynthia H. Longwisch

were also employed on the entrance pavilion and above the third-floor windows on the primary elevation. Limestone trim was substituted for Kirchner's standard sandstone trim and is seen at the water table, window sills, first-floor facade lintel course, capitals of columns, third-floor sill course, third-floor lintel course on the facade and regular lintels at the side elevation, gable trim and coping of the facade's gable. The trademark tourelles appear at the third story above the entrance. A side gable is cantilevered in a hint of Ittner's Jacobethan future designs; below, a one-story "drum" probably housed the kindergarten. At the time of its demise, most of the windows were broken out or boarded up and the school had been heavily damaged by vandals and weather.

A nomination to list this school in the National Register (Carol Corey, 1985) failed to be approved by the Review Board due to insufficient documentation, but staff member Beverly Fleming noted that the school appeared to be eligible.

of the windows on the Forest Park Boulevard (primary) elevation are of the 6-over-9 double-hung sash variety in groups of five; one segmentally-arched window is bricked up. A small porte cochere is located on the front elevation for facilitating the entrance and exit of handicapped students. The photo is of the side elevation, which is also heavily used and very visible; a photo of the primary elevation is available but not chosen for this survey because of its cramped and distorted angle, necessary due to the nature of the very heavy traffic at this intersection. The primary elevation has no distinguishing characteristics not visible in the photo provided. The 1935 addition added a hydrotherapy room to the 12 original rooms; its addition is neither readily detected nor noted on the Sanborn maps as distinct from the rest of the school.

windows appear in vertical groups of three. Above a stone string course, the attic story features stone mini-parapets at either end with crests on panels; stone finials define the space between. The second and attic stories of the central block are highlighted with diamond-patterned brickwork, as are the second stories of the wings. "Gallaudet School For The Deaf" is inscribed across the front of the stone facade above the first-floor windows. The 6-over-9 double-hung sash windows are in groups of three across the wings and feature a stone sill course at the second story. The gable ends of the wings have stone coping and there is a copper cornice. A short original iron fence with stone gateposts defines the school's property.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school is very similar to the other early surviving examples of schools in St. Louis, with the exceptions of the flat roof and round-arched (rather than segmental) third-story windows. The roof was probably of the truncated hipped style similar to Carr Lane and Carondelet, but was damaged by the 1896 tornado that devastated much of the Lafayette Square area. It should also be noted that the use of a contrasting color of brick (in this case, brown) for quoining and window surrounds and the use of a sandstone string course give hints of A. H. Kirchner's schools of twenty years (over)

43. HISTORY AND SIGNIFICANCE School was named after U.S. Vice President George Clinton (1739-1812). School was originally called Clinton School, changed to Clinton Branch when the new Clinton school at 1224 Grattan opened in 1940. This building and Lyon School, also 1868, are the two oldest extant school buildings in St. Louis. Building permits were not kept at this early date and school records of this time mention only the "architect," without giving his name.

the old (front) section were probably 12-over-12 with divided transoms; a few of these remain. Windows in the addition to the rear feature 6-over-12/6-over-12 pairs of double-hung sash. School records indicate that the 1899 addition was of 8 rooms and the 1909 addition was 9 rooms; an auditorium was added in 1947. One of these additions included two one-story round "drums" on the south (right as one views the school) side, probably used as kindergarten rooms. These feature narrow 6-over-12 windows and a stone water table and have flat roofs. Narrow rectangular windows (oriented horizontally) appear at intervals around the attic story of the rear addition. Basement windows are bricked in, as is the case with most of Kirchner's schools. A short iron fence encloses the property.

4. PRESENT LOCAL NAME(S) OR DESIGNATION(S)

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The original part of the school is a simply-designed example of the pre-Ittner St. Louis school with some Victorian embellishments. Very long, segmentally-arched double-hung sash windows have a rectilinear pane design at the second floor and more conventional 6-over-6 panes in the first floor. Windows are joined by a stone sill course and by a course of pressed brick joining the arches. Intricate brickwork at the attic includes corbeling at the cornice and two courses of pressed brick. A small pediment in the center of the building at the cornice highlights a stone tablet engraved "Gratiot." (over)

5. OTHER NAME(S)

43. HISTORY AND SIGNIFICANCE The original name of the school came from Judge Charles Gratiot (1752-1817), the first or one of the first presiding judges in St. Louis (c. 1804). Building permits for this city block are missing, but school records indicate that four rooms were added in 1899 and three rooms in 1919; Sanborn maps clearly show the dates 1909 and 1919 on the wings. Given the designs of these wings, we have chosen the Sanborn dates as correct.

The older part of the building is flanked by two rectangular, flat-roofed wings (see discussion under #43). Most of the original 6-over-6 double-hung sash windows of the wings (as well as a few in the older part) have been bricked up. Stone sills remain. Both sections, although of different dates, have stone coping and ashlar foundations that match the older section. Small parapets with minimal stone designs appear on the primary elevations of both; these do not match. The school and its wings are above grade and stand behind a bank of random-fitted limestone that forms a sloping retaining wall; this is almost certainly of a later vintage.

with an intrados faced with medallions. Banks of Gothic-arched casement windows are separated by ornately carved stonework between floors; these windows fill the entire space between the entrance and roof balustrade. Wings flank the center block; these feature 6-over-9 double-hung sash windows in groups of five. The wings terminate in short, front-gabled blocks; the gable ends of these, as well as the sides of the central entrance block, have diamond-patterned brickwork. One-story wings project additionally from the gable ends toward the street. These are somewhat unusual for schools in this survey; quarry-faced ashlar limestone covers the walls of these small units, with dressed limestone used as quoining and window surrounds. Above the windows, short brick parapets rise in front of hipped slate roofs; stone coping and a crest ornament the parapets. Quarry-faced ashlar limestone is used throughout the building at the basement level. Side and rear elevations have, for the most part, the same 6-over-9 windows in groups of five. The diamond-patterned brickwork in the gables also appears around the building.

patterns (one below the other) enriches the roofline, while a corbeled course below a third-story stone sill course perhaps denotes a former roofline; building permits are unclear as to exactly where the additions were made, but one could easily have been the addition of a top floor, and the corbeling perhaps hints at this. Square stone medallions with stylized flowers are located at the imposts of the first-floor windows and at the corners of the building. A round window is located at the second floor directly above the entrance. A stone string course separates the first two stories and there is a stone water table. Some of the basement windows have been altered with brick. The school is built almost at the sidewalk with very little lawn space. It is located slightly above grade.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The Turner Branch School is of fairly simple design with fewer embellishments than most of Milligan's other St. Louis schools, possibly because it was at first a "colored" school, and so was given less attention. A center projecting entrance bay has a fanlit round entrance surmounted by a small iron balcony; a simple stone pediment above the roofline is backed by a stone-coped brick structure. "Charles Henry Turner School" is inscribed across the stone architrave. Milligan's	<div style="font-size: 1.5em; font-weight: bold;">PHOTO MUST BE PROVIDED (over)</div>
--	---

43. HISTORY AND SIGNIFICANCE
 Named for Charles Turner (1867-1923), scientist. Original cost: \$233,072. Originally built for the use of "colored" students only.

familiar quintet of 6-over-9 double-hung sash windows appear on this school, relieved by small paired casement windows with pressed-brick hoods at the first floor. The wings have gables on their primary elevations; at the attic story these have diamond-patterned brickwork. The windows of the upper floor of the wings have apparently been altered somewhat; wood infill below is surmounted by pairs of top-hinged single-pane windows with an apparently non-functioning 8-paned window above that. Windows at the first floor of the wings remain the same as the rest of the building. A short iron fence with brick gateposts encloses the property.

<p>42. FURTHER DESCRIPTION OF IMPORTANT FEATURES <u>Like the other non-School Board commissions, this school belies its origins as a Catholic high school. The primary difference between it and the public schools is, of course, its stone sheathing. The building permit says that the school is brick beneath the stone. The stone is dressed, light grey, and is not grooved or ornamented otherwise. The flat roof is balustraded on the sides and between the parapets that top the front elevations of the entrance bay and two wings. Crests top the parapets of the wings, while the center parapet is pedimented and features the carved name of the (over)</u></p>		<p>1. NO.</p> <p>2. COUNTY</p> <p>4. <p>43. HISTORY AND SIGNIFICANCE <u>The school was commissioned by authority of Cardinal John J. Glennon to be William Cullen McBride Catholic High School. The building permit for \$200,000 was taken out 12/3/23. The school was known as McBride High School through 1971, after which it was called Step Catholic High School for one year before becoming Martin Luther King, Jr. Catholic High School. The name of the American civil rights activist was retained when the school was purchased by the Board of Education and changed to a middle school during the early 1980s. Architect Henry P. Hess was born in St. Louis in 1884 to a family of contractors. He began his training at 14 with Henry Weise and worked for many prominent local firms, including Isaac Taylor and William Ittner. Hess especially was aware of Ittner's theories (over)</u></p>		<p>6. TOWNSHIP</p> <p>RANGE</p> <p>SECTION</p>

school below. Six round stone Doric columns support this parapet, spanning the second and third stories; these in turn are supported by a stone base with three round arches, each intrados of which is highlighted with medallions. The entrance is behind these arches. Circular symbols of learning and Christianity (quill & pen, book, winged hourglass, cross, etc.) are mounted across the top of the arcade. Plain medallions can be seen at the cornice, and oval medallions flanked by swags can be seen behind the columns at the second and third stories. Windows are paired and in threes; they are transomed and double-hung sash, so the final effect is of three rows of four vertically divided panes. Stone pilasters with Doric capitals divide the window bays and highlight the corners of the building. The school is located above grade and the first story is bermed.

#43 regarding the requirements of educational facilities. Hess formed his own firm in 1916 and began a career that included many commissions for the archdiocese of St. Louis. He designed some 700 buildings, including Cardinal Glennon College, Rosati-Kain High School, Christian Brothers College and De Andries High School. Hess' buildings of the twenties and thirties often reflect traditional historical revival styles, while later in his career he was more influenced by Art Moderne and other contemporary movements. Hess died in 1957.¹

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The primary elevation of this school is identical to Kirchner's 1893 Montessori/Euclid School with the exception of a wider, flatter water table (the earlier school's water table has a more pronounced lip). (see description on the Montessori/Euclid sheet) The major difference in the two schools is the condition: Benton School is deteriorating rapidly and is almost beyond repair. It is boarded up and fenced off to keep vandalism at a minimum, but weathering is doing the bulk of the destruction, particularly on the sandstone and intricate brick areas. The corbeled cornice is crumbling

43. HISTORY AND SIGNIFICANCE Named for Thomas Hart Benton, statesman. Original cost: \$25,903; 1903 addition by Ittner: \$49,000 (added 6 rooms).

and has many gaps, particularly along the Terry Avenue (side) elevation. Large portions of the tourelles have broken off and fallen. The sandstone courses are spalling badly. Mortar is eroded entirely away in many places, particularly the south (Terry Avenue) elevation. It is indeed unfortunate that this school and its near twin, Charless School, are in such a state of decline. The 1903 addition by Ittner is located at the rear of the original school. It is in only slightly better shape than the original part. The design blends impeccably with the older part, using buff brick surrounds and sandstone banding in conjunction with the original.

the inner sides of the wings is a flat-roofed inset with a short wall at the roofline (one story plus basement); the name of the school is inscribed on a stone panel inset into the wall. This one-story portion of the building has four blunt-arched windows separated by stone-capped brick buttresses (this type of buttress also appears on the inner wall of the entrance bay). On the second floor behind the one-story portion, half-timbering appears between paired windows. Diamond-patterned brickwork is used in the gable ends. A dormer faces the side elevation. Stone-coped brick-balustraded brick walls project from the edges of the building to the sidewalk, where they adjoin a short iron fence with stone-topped brick posts. A new, one-story red brick building (see photo, right) adjoins but does not connect to the original school; it houses additional facilities for the school.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES Most of the 1935 portion of the school is obscured behind a 1964 addition; in the photo, the portions above and behind the low front portion are the original building; the foreground is the 1964 part (painted mural done in the 1980s). Southwest High is an extremely functional school and reflects its heritage as a Depression PWA project. Double-hung sash windows are in groups of three and cover the entire Arsenal elevation. Virtually the only attempt at ornamental design occurs across the attic story (visible in the center of the photo behind the 1964 part) in the form of brickwork (over)

43. HISTORY AND SIGNIFICANCE The original school, which is actually behind a 1964 addition, was a PWA project costing \$716,251. It was named for its location.

43. HISTORY AND SIGNIFICANCE Vashon High school was the first high school to augment the secondary education program for "colored" students provided previously solely by Sumner High School. Vashon moved to 3405 Bell Avenue (the 1931 Herbert S. Hadley Technical High School, originally) in 1963. The premises were subsequently taken over by Harris Teacher's College which later became Harris-Stowe Teacher's College and then Harris-Stowe State College. The building originally cost \$1,180,790.

employed at corners; the primary corners of the main elevation of the center block, however, feature a pair of vertical grooves. Severe stone surrounds divide originally transomed windows of the central block into groups of four (two upper stories) or three. The entrance, a recessed stone blunt arch, is flanked by buttresslike structures that decrease in width as they rise; these are trimmed in stone. A narrow stone-buttressed, stone-coped brick balustraded balcony is featured immediately above the entrance. A band of diamond-patterned brickwork encircles the center block at the attic. The wings feature a stone lintel and sill course at the third story. (New) metal-framed windows in the wings are primarily 1-over-1 double-hung sash; some are non-functioning single-paned types. Windows on the rear elevations have all been replaced with metal framing in the manner just described. Two stories high, the rear portion of the building is also flat-roofed and distinguished only by a stone water table and stone second floor lintel course.

of five, in 6-over-9 pane configurations of double-hung sash. These have a stone sill course at the third floor and regular stone sills at the second floor, with soldier arches throughout. Casement windows with divided transoms also appear, usually in pairs. Small secondary entrances flank the center bay and feature tiny, one-story, stone-balustraded foyers that project from the body of the school. The school is enclosed in an original short iron fence with brick posts. The 1926 addition was made so skilfully that it cannot be detected from the outside; the division is not noted on the Sanborn maps. Twelve rooms were added in 1926 for a total of 25.

banks of leaded seven panes across surround French doors which open onto a small piazza enclosed by an ornate iron railing. Above the doors, scroll pediments "float" on the top row of windows. These doors evidently lead into kindergarten rooms. Windows otherwise are 6-over-9 double-hung sash in groups of five or singles in a casement or center-hinged style; all have soldier arches and brick sills. Two wooden octagonal cupola-like vents at the ridge line of the roof alternate with chimn . A brick balustraded fence extends from the sides of the school lengthwise to the edges of the property.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The center gable of this school is centered over a projecting entrance bay; a tiny round window in the gable is now surrounded by a material of more recent origin than the building. Six dormers, three per side, flank the gable on the primary elevation. Below the center gable, a wood-balustraded porch is supported by eight square wooden columns. The balustrade forms a railing for the deck of the porch at the second story, and a more recent awning shades this second-story balcony/deck area. The foundation of the porch is brick, and the entrance is a rectangular-transomed door. (Over)		27. OTHER SURVEYS IN WHICH INCLUDED			
43. HISTORY AND SIGNIFICANCE The Children's Home Society of Missouri was founded c. 1889 and used a variety of large homes in the area of this school to house orphans. A Christian society actively seeking adoptive homes for its wards, the Society built this building for its Receiving Home where infants arrived initially from all over the State. The Society is first listed at this address in the 1905 city directory, and at least one present Society official remembers a story that the building was to be done in time for the St. Louis World's Fair in 1904, as a modern showplace of adoption agencies/orphanages (this story, of course, should be viewed with some skepticism because the same type of thing is attributed to virtually every c. 1903-06 building in St. Louis). Secondary entrances flank the porch and are now bricked up; these were reached by flights of concrete steps with iron railings. Windows have soldier arches and brick sills and are 8-over-8 double-hung sash. The school has a plain cornice. It is in need of some maintenance, particularly the wood parts of the porch.

#43 1963, at which time they moved to larger quarters farther west. The Society sold the building directly to the Board of Education, and Ashland Branch School began operation in 1965, continuing up to the present. Today the school is being used as a preschool/kindergarten. Building permits for this city block are missing, but Sanborn maps say the school was "rebuilt" in 1934. One Society official said she (despite a long association with the organization) was unaware of such an alteration; the building shows no outward physical signs of having had major changes made.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES Like his earlier Wilkinson and Scullin (and, to some extent, Lowell) Schools, Milligan's Lindenwood School features a double-gabled wing and a wing with a regular gable. As with the first two named, he inserted a one-story segment with a flat roof and short wall (in this case, a stone balustrade) between the projecting wings. His precedent for this was Ittner's Madison School (1910) (see Ittner Survey, 1987). Stone-capped buttresses divide the bays of this one-story segment.

which employs multipane windows rather unlike Milligan's usual 6-over-9 choice, which do appear in the primary elevations of the wings in their customary grouping of five. A stone sill course doubles with a separate stone string course to band the building at the second story. Small multipane, stone-hooded elliptically-arched windows ornament the attic stories of the two outer gables; diamond-patterned brickwork also highlights the two. The inner gable, also the entrance bay, features two stone mock-towers at the corners, flanking a fancifully-carved stone surround at the second and attic floors. The entrance itself is a regular-sized pedimented doorway within a blunt-arched stone surround; large stone Doric columns flanking the entrance support a broken-pedimented hood with finials and the school's name carved in the architrave, all of stone. The windows above the pediment are diamond-paned stained-glass of opaque grey. Windows except where noted have soldier arches; ground-floor windows of the one-story section have segmentally-arched 6-over-9 double-hung sash. Secondary side entrances are covered with oversized doghouse hoods with large wooden brackets. The school, somewhat above grade, is surrounded by an original short iron fence. The building is not in use at present but has yet to show the effects of vacancy.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school was built primarily in two sections, the east (right side of photo) and west. The east side is the large of the two and the more highly ornamented. It features linked round-arched windows at the first floor; these have wide brick arches and pressed brick hoods. The arches are blind and the windows are 6-over-6 with sandstone sills. Below a sandstone sill course at the second story, multilayered, toothed corbeling faces the building and a modified version returns at the sides. Second and third story windows are transomed, double-hung sash with 6-over-6 panes and pressed (over)	25. OPEN TO PUBLIC? YES (X) NO () limited	37. CONDITION INTERIOR _____ EXTERIOR <u>good</u>	
43. HISTORY AND SIGNIFICANCE Named for Jacques Marquette (1637-75), explorer of the Mississippi Valley. School records indicate that 8 rooms were added in 1895 and 4 rooms in 1899; these do not appear in building permits, which show a 1913 \$14,127 alteration not noted in school records.	26. brick molding defining groups of three. Third floor center windows are a round-arched group of three with sandstone quoined surrounds and engaged Corinthian pillars; below them, second-story windows are a floral-motif terra cotta surround. The entrance below is a flat arch flanked by large Corinthian pillars. Corbeling just below the terra cotta cornice and terra cotta coping encircle the east part of the school.

The west part of the school joins the east in a recessed bay; the entrance there is now bricked up. Sandstone sill and lintel courses characteristic of Kirchner divide the school horizontally. Windows are of the same 6-over-6 double-hung, blind-transom type seen in most of the east part. Pairs of tiny, horizontally-oriented windows at the attic are interspersed with terra cotta medallions. The cornice features a similar treatment to that of the east. Basement and side windows of both parts of the school are bricked up. The grade slopes downward to the east and an ashlar limestone retaining wall defines the property, which has a narrow lawn. The rear of the eastern section, visible somewhat in the photo, is probably the 1899 addition.

two Doric columns. The string courses join the exaggerated segmental arches of the ground floor casement windows and secondary entrances; these arches also feature stone keystones. Windows are again found in groups of five on the upper stories and have 6-over-9 paning. The wings have small parapets on the front elevations and these are corbiestepped and feature more stonework. Four porthole dormers embellish the roofline of the front elevation. The mottled brown brickwork gives way on the entrance bay to a diamondlike design utilizing lighter brick. Six rooms were added to the original 19 in 1926, most probably the two wings. The addition is a perfect match; Sanborn maps show no divisions to indicate where the additions really are.

<p>42. FURTHER DESCRIPTION OF IMPORTANT FEATURES <u>Like Kirchner's Benton, Montessori/Euclid and Charles Schools, Froebel School has the same triple arches supported by short Corinthian columns, the same sandstone string courses, buff brick surrounds, brick base & fenestration. Lacking, however, is the gable over the entrance with its sandstone and pressed-brick decoration. At some point, evidently in the early years of this century, a new roof and some part of the upper story (or all of it) were added in a style that combines curved wooden brackets and a row of narrow windows at the attic (see #43 below). Perhaps the change was made due (over</u></p> <p>43. HISTORY AND SIGNIFICANCE <u>Named after German founder of Kindergartens Frederick Wilhelm August Froebel (1782-1852). Evidently no building permit filed for original school. Rear addition to school shown as completed "about 1924" on Sanborn map (a very unusual use of a circa date for them); school records date an addition as 1937. Building permits confirm neither. Additionally, building permits show two identical entries, one in 1900 and one in 1902, both by Ittner, showing two different contractors, "addition third story to brick school." The earlier of the entries was for \$14,000; the 1902 version for \$46,000. Whether these are duplicates is unclear. A new roof and attic story, at the very least, were added to the school, however, because the Craftsman roof and Greek Revival attic windows are</u></p> <p>44. to damage the building may have sustained during the infamous 1896 tornado that razed Lafayette Park and vicinity. It may be that the building was temporarily only two stories high until funding was secured; at any rate, school records fail to list additions or alterations to the school prior to 1937. Like Benton School, the rear addition was designed to provide a continuity with the older part; the buff brick surrounds and sandstone courses, rough-laid brick base on stone, etc. are all carried around the addition.

<p>42. FURTHER DESCRIPTION OF IMPORTANT FEATURES This school is currently in a state of rapid deterioration, although it is currently undergoing some renovation and is apparently slated for more improvements. A gabled projecting bay in the center of the building is the location of the entrance and figures as the dominant feature of the understated design. A dentilled elliptical hood shelters the doorway and is centered in a wooden surround that rises to the second story; above the entrance, five elliptically-arched windows (two blocked in) are separated from five larger (6-over-9 double-hung sash) windows by solid panels. Other second-story (over)</p> <p>43. HISTORY AND SIGNIFICANCE Named for Peter Herzog (1846-1925); he served in the St. Louis Public Schools for 50 years. windows also feature elliptically-arched surrounds and are grouped in fives. These are separated from the first-floor windows by herringbone and fancy brickwork. First-floor windows also have wooden surrounds and sills but lack arches. The two first-floor bays of windows to the left of the entrance (as the viewer faces the building) have inset French elliptically-arched doors that open onto small iron balconies. Basement windows are undistinguished. A soldier course water table circles the building. An intricate design of interlocking arches fills the gables; the front gable additionally features an inset, narrow round-arched panel, while the side gables have three of these panels. Two copper-roofed, multi-sided vents are located on the ridge of the building. A small one-story addition is attached to the south side of the building and is evidently used for storage. The school is located very much above the grade of the playground and is unusual for St. Louis schools in that it faces the playground rather than the street.

name of the school is carved in a stone panel above that. The bay on the body of the school behind the entrance is defined by pilasters and is gabled at the top. Small, stone-embellished tourelles are located just below the roof line at the edges of this bay. Second-floor windows are segmentally-arched, while third-floor windows have joined round arches and are separated by paired and engaged brick columns topped with Corinthian stone capitals; the round arches of these are blind and filled with floral-motif stone. Tiny windows at the attic story also are divided by brick pillars; they feature heavy stone lintels with a half-round window above. The rest of the original part of the school follows a similar pattern of ornamentation: while first-floor windows have jack arches, second-floor windows are triple versions of those described above for the third-floor windows of the center bay; third-floor windows are segmentally arched. A stone water table, second-floor stone sill course, and third-floor sill and lintel courses provide continuity by banding both old and new portions of the school together. The three-story newer portion features regular fenestration (9-over-9 double-hung sash) with jack arches. A secondary entrance beneath a brick balustrade connects the two portions of the school visually across a recessed area. The newest part, to the left in the photo, is one story and visually undistinguished. The school is fronted by a short iron fence set into a limestone retaining wall.

Abstract designs are carved across the lintels of the third-floor windows and at the tops of the stonework. Windows of the entrance bay are 6-over-6 (horizontally-oriented) double-hung sash. Windows to the right of the entrance bay as one faces it are paired 3-over-3, (horizontally-oriented panes) double-hung sash windows in groups of three. These have the same narrow stone surround seen on the Garfield School and also feature the soldier-arch style enclosure. A soldier course appears at the cornice. The base of the school is laid in rusticated grooves; a stone lintel course is located at the first floor and the building is stone-coped. Two tall electric lamps are mounted on either side of the entrance on short stone walls. A secondary entrance distinguished only by a simple narrow stone surround is located midway from the main entrance in the primary elevation.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES **Lyon School has the combination of elliptically-arched windows on the third floor and round arches on the second, standard among the earliest extant St. Louis schools. Two Doric stone columns flank a round-arched entrance in the center of a projecting entrance pavilion; rusticated brickwork appears to either side of the entrance but appears again only at the base of the west chimney (left as one views the school). Stone trim is used as a second-story sill course, a third-story sill course only on the entrance bay, on all window sills, and in curiously heavy lintel courses "joining" windows (over)**

43. HISTORY AND SIGNIFICANCE **Lyon School is mentioned in the Official Proceedings of the St. Louis Board of Education as having been built in 1868. It appears in Compton & Dry's 1875 Pictorial St. Louis and it conforms with other school designs of that era, making it one of the earliest surviving examples of school architecture in St. Louis. The school was named after Union Civil War General Nathaniel Lyon. It was sold to Anheuser-Busch in 1907; the company modified the interior to suit office use, but restored the exterior, including painstakingly matching decayed cornice brackets. The entire brewery complex is classed as a National Historic Landmark. Building permits were not kept at this early date and school records refer only to the "architect," not mentioning his name.**

on the first-story side elevations and first-story windows that flank the entrance bay; narrow stone molding enframes selected windows on the primary elevation as well. The overhanging eaves are bracketed above a corbeled brick cornice. A flat-roofed, two-story addition appears at the east (right) side. A multistory brick office building at the rear of the school joins the school to another old building, visible at the extreme left of the photo. The school has been carefully maintained and the exterior restored as much as possible, with the exception of the 1-over-1 modern windows, which unfortunately change the character of the school.

by engaged stone Corinthian columns (embellished with carved crests, floral swags, etc.) and by round outer Corinthian columns with surfaces scored in a Byzantine diamond pattern. The bases of the columns are covered with carving. The intrados of the arch features egg & dart molding, bead & reel molding and reel molding, as well as scored-diamond and floral moldings. A crest highlights the arch. Above, on either side, intricately-ornamented pyramid-shaped finials rise; behind them, Islamic tracery in stone encircles the windows. The entrance bay is buttressed on either side with narrow, tile-capped brick buttresses rising about halfway to the roofline. Wings, one of which terminates in a block, flank the entrance bay. They employ 6-over-9 double-hung sash in groups of five with brick sills and no arches of any kind. Smaller secondary entrances on the primary elevation have tiny tile roofs with very large wooden brackets. The tile roof has overhanging eaves with exposed rafters; two tiny dormer windows are located on each side of the center block. A short iron fence with stone-capped brick posts encloses the lawn.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES The school is located much above grade and makes good use of stone trim. The asymmetrical building is dominated by a projecting entrance bay which features a design of crosses in the brickwork that resemble stylized flowers; stone coping and stone-enframed windows highlight the gabled bay. Most of the windows employ the 6-over-9 double-hung sash adjoining-in-groups-of-five pattern frequently used by Milligan. Stone appears in the water table and window sills.

Exposed rafters appear at the overhanging eaves. Six rooms were added to the 13-room school in 1926; it is impossible to determine where the addition is from observation and the Sanborn map makes no distinction between the two parts; however, it is likely that the single wing is the addition.

stone-hooded window at the attic. Half-timbered dormers ornament the roofline on the side elevations. Windows are 6-over-9 double-hung sash, found in groups of five in the gabled ends of the wings but also found in pairs and triples around the building. Diamond-patterned brickwork appears only in the parapet of the entrance bay, rather than all the gables as is more common with Milligan's schools. A short, stone-railed, brick-balustraded landscape wall extends from the school to the sidewalk. A short, original iron fence encircles the school. Two wings were added in 1934, adding 8 rooms and gyms to the original 14 rooms in a WPA project (see diagram).

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES Longtime vacancy and a series of fires have left Charless School in a state of major deterioration, despite rumors of its reuse. The school is virtually identical to the original parts of Montessori/Euclid and Benton Schools by Kirchner, although the distinctive elements of the center gable have been destroyed. The triple-arched entrance supported by tiny Corinthian columns, the use of sandstone string courses, the use of buff brick surrounds of the openings, the tourelles flanking the center gable, the corbeled cornice and the chimnies are all the same as the other two schools. (Over)

43. HISTORY AND SIGNIFICANCE Named after Joseph Charless, Jr. (1804-59), early landowner. Building permits are missing for this city block.

Unlike the other two schools, there evidently was no need for large rear additions, so the building remains very much as it was built. The school is boarded on the lower floors and unsuccessfully enclosed within a chain link fence; however, like Benton School, weathering is now a key factor in the demise of the building, particularly since the upper floors have been left open since the fire(s). This school, like A.H. Kirchner's Benton and others, probably was initially built in one story and had upper stories added later, although city records for this were unavailable.

coped curvilinear parapet. A stone lintel course encircles the building at the second floor. Windows are of the 6-over-9 pattern in groups of five on the wings, but are found in pairs in the body of the building. At the attic story, round windows are set in curvilinear stone surrounds and shallow shed dormers face either side of the wings. Lighter headers are used in a variation of Flemish bond to create an interesting effect on the fabric of the building, a reverse of the standard usage of dark headers. Secondary entrances are located in the side elevations and are covered with shed-type hoods supported by enormous wooden brackets. The school sits above grade and is enclosed within an original short iron fence with brick gateposts. The 1928 "addition," called such in several School Board publications, is also noted in School Board material as being the completion of two rooms; this correlates with the relatively small cost and the design of the building.

51 SHENANDOAH SCHOOL

probably housing the kindergarten originally. The entrance is behind a round brick archway that appears to have been inserted between two projecting bays of the school; once through the first arch, another round brick arch is reached up a flight of limestone steps; beyond that arch are more steps that lead to the actual door. It seems likely that the first arch is part of one of the later add-on processes. No ornate brickwork or stonework and no corner-stone were to be found.

42. FURTHER DESCRIPTION OF IMPORTANT FEATURES In terms of fitting into categories of architecture of St. Louis public schools, this school is an anomaly. Located immediately adjacent to (but not connected to) St. Philip Neri Church, the school has a distinctly ecclesiastical flavor, most notably in the stone cross atop the center parapet above the doorway. A stone niche in the parapet is glaringly empty now and almost certainly held a religious figure at one point. The rest of the building appears to have been designed in an attempt to blend in somewhat with local public schools such as those designed by Ittner and Milligan. (over)

43. HISTORY AND SIGNIFICANCE School is located next to St. Philip Neri Church; cornerstone reads, "Nov. 7, 1920 To the glory of God in honor of St. Philip Neri." It ceased functioning as a Catholic school in 1972-1973 and subsequently became a public school named after the American humorist. Preston J. Bradshaw (1880-1949) arrived in St. Louis around 1907, after graduating from Columbia University. He worked briefly as a draftsman for McKim, Mead & White, and later partnered with Edward Nolte. Bradshaw is best known for his hotel, apartment and residential designs, many of which are listed in the National Register. Some of his major designs were the Chase Hotel, Chase Apartments, Coronado Hotel and Forest Park Hotel. He usually worked in more contemporary styles, his detailing incorporating some of (over)

Red and brown brick are mixed with culls to produce the tapestrylike effect so often employed by Ittner. Windows are grouped in fives flanking the entrance and are of the 6-over-9 double-hung sash variety with soldier arches and stone sills. A compound blunt arch of stone is flanked by engaged square stone columns to form the entrance; above, a dentilled stone entablature is topped by a fanciful stone pediment with finials. A double window above has a stone surround and hood. A curvilinear parapet with cross is the stone-coped roof's only ornament; it is unrelieved even by a cornice. Some decorative brickwork appears in the form of a soldier course at the first-story sill level and in large squares delineated by rows of headers, located at the sides of the center block. The school has no true lawn and sits almost upon the sidewalk.

#43 the new concepts that evolved from the Arts & Crafts and Art Nouveau movements. Bradshaw is not generally known for nonsecular designs.

16. FURTHER DESCRIPTION OF IMPORTANT FEATURES Adams School was built in three distinct parts, each attached to the other as shown in the sketch map. Photo 1 shows the original 1878 primary elevation of the school; the later additions are visible to the rear of the building. The two-story 1878 portion has a truncated hipped roof and a gabled center entrance pavilion which features a round pressed-brick arch entrance below a triad of round-arched windows at the second story. These are echoed by a smaller set in the gable. A sandstone sill course at both floors returns on the sides to include the first three side windows. First- (over)	26. LOCAL CONTACT PERSON OR ORGANIZATION	38. PRESERVATION UNDERWAY? YES () NO ()
17. HISTORY AND SIGNIFICANCE School was named for U.S. President John Adams. Building permits are as follows: 7/6/91: 2 sty. school, \$21,000; 6/6/94: 2 sty. school \$3,000; 9/28/99: 3 sty. school \$12,000; 11/9/04: alter/add, \$38,000; 6/20/13: alter, \$14,000. The 1899 and 1913 alterations do not appear on the Sanborn (from which the sketch above was taken) map. School records indicate that the school was built and added to in the years 1878, 1895, 1899 and 1906. The school is among a group scheduled to be phased out and closed within the next two years.	27. floor windows are segmentally arched while those on the second story are round-arched. Small dormer windows are located on the sides of the building. A stone water table tops the ashlar limestone foundation. Windows of this part of the school have been replaced at some point and the arches are all blind. The facade is 9 bays wide and the side is 6 bays wide.

Photo 2 shows the 1895 school designed by August H. Kirchner and which employs some of his familiar motifs. Built separately from the 1878 part, this flat-roofed building of Romanesque Revival design features a pair of buff-brick round arches supported by short brick Corinthian columns. In an unfortunate alteration, the original entrance - presumably arched (see Benton, Charles, Montessori/Euclid) - between the two smaller arches has been eliminated and replaced by a blocked rectangular doorway. Above the doorway, the original second-story windows (buff surrounds still in place) have been bricked up almost from lintel to sill and new, narrow windows dropped in below. Original buff-brick window surrounds and sandstone sill courses enframe stark, modern windows to give the school a blank and forbidding look. A narrow row of horizontally oriented windows at the attic have also been blocked in; basement windows, which feature large jack arches and one round arch, are also bricked up. Terra cotta coping rims the building, which is five bays across the front and four on the sides.

Visible in Photo 1 is the 1906 part of the school, which is sandwiched in between the two older sections. The two-story red brick section is 5 bays wide and features jack arches with stone keystones. A portico entrance on the Tower Grove Avenue side features stone balusters. A stone water table and stone sills embellish the section. Windows have been modernized on this part of the school, too. William Ittner was the School Board architect at the time of this portion's construction, and it shows small Jacobethan touches he frequently employed.

floor. Behind the balcony, a broken-pedimented stone surround enframes a triple window; single multipaned windows flank it and a stone-framed round window is located directly above in the attic story. Tiny dormers break the roofline, two on each side of the entrance bay. A perpendicular wing terminates one end of the building. A red terra cotta cornice is under slightly overhanging eaves. The building, slightly above grade, is enclosed by an original short iron fence with stone-capped brick posts.

12. FURTHER DESCRIPTION OF IMPORTANT FEATURES <u>Like the other schools not commissioned by the Board of Education, this one looks a bit different from the standards set by Board architects. An attempt was evidently made to fit into the Jacobethan genre of Ittner and Milligan, starting with the mixed colors of brick for a tapestrylike effect. Terra cotta (white) trim replaces the stone used in the majority of St. Louis schools. A center entrance bay is marked by engaged brick pilasters rising through the cornice to flank a pediment slightly above the roofline. The pediment features a central terra cotta inset with ornate (over)</u>			
13. HISTORY AND SIGNIFICANCE <u>Originally built for the Mt. Calvary Evangelical Lutheran Church as a private school (building permit: 3/26/28, \$40,000), the building subsequently became Wells School, then Emerson Branch, and now houses offices of the School Board.</u>

heraldic shield; terra cotta finials flank it, along with two terra cotta string courses. Below, the terra cotta cornice crosses the bay; it features small medallions spaced at regular intervals. Terra cotta shields ornament the pilasters of the entrance bay just below the cornice. Between the entrance and cornice, triple windows with terra cotta surrounds are separated by terra cotta diamonds and brickwork. A blunt-arched terra cotta entrance repeats the medallions seen at the cornice; terra cotta tracery above the arch rises to the sills of the windows above. Oval cartouches mounted on cruciform plaques, both of terra cotta, flank the entrance instead of windows. Windows on the sides are separated by brick pilasters with small stone buttresses at the second story. The grade slopes downward to the rear of the property to expose most of the basement at the rear.

SECTION

Four clusters of diagonally-set stacks form the distinctive chimneys. Gabled wings feature an elaborate design of diamond brickwork and have carved brackets and exposed rafter ends. A one-story "drum" projects from the center of the body of the building and has a stone-coped crenellated flat roof. A stone balustrade defines a narrow piazza along the front of the school, which is above grade. Short stone pillars interrupt the iron fence that rims the property.

<p>42. FURTHER DESCRIPTION OF IMPORTANT FEATURES <u>Another of Sanger's PWA collaborations is Garfield, which is only slightly less severely functional than his other three projects with the agency (Southwest High School, Mallinkrodt, Turner Branch). The school's primary visual interest lies in its entrance block, which projects a few feet both forward from the school and upward from the rest of the roofline. A three-bay-wide entrance (windows unaltered) of a Moderne design features two flanking engaged ovoid stone pillars that support a grooved and streamlined architrave and a similarly streamlined panel with the school's engraved (over)</u></p> <p>43. HISTORY AND SIGNIFICANCE <u>Named for U.S. President James A. Garfield. School was a PWA project costing \$237,363.</u></p>		<p>6.</p>

name. Two narrower engaged stone columns separate the three doors as well as the three panels above the entrance lights. These panels depict classically-draped people in what appears to be a group of Greek scholars. The entrance is reached by a flight of stone steps shielded by a stone-coped brick wall. The base of the wall is rusticated to match that of the base of the building; a stylized grooved design appears above. A stone water table and first-floor lintel course encircle the building, which is also stone-coped. Windows on the primary elevation to the right (as one views the building) of the entrance are arranged in paired groups of three; these groups have narrow, simple stone surrounds and soldier arches that return around the entire set of windows. These windows, as well as most of the others in the building, were replaced in 1987-88 by the aluminum-framed 1-over-1-over-1 panes visible in the photo; they were previously of a 3-over-3 horizontal configuration. The single windows to the left of the entrance were formerly 6-over-8, also horizontally oriented. The side elevation facing South Jefferson has a stepped-out bay that does not include the upper story; it features a narrow iron balcony with narrow wrought-iron supports below. The windows of this bay feature stone mullions. The opposite side's elevation (Texas Ave.) features tripled windows slightly stepped out from the building and with horizontal bands of grooved brickwork between floors in a Moderne detail.
