DNR Field Observations

May 30, 2013

Winds were out of the south, causing locations north of the landfill such as Northwest Industrial Park to be impacted with moderate to strong odors throughout the day. With successful abandonment of one RCP (LCS-3) today, one RCP remains to be abandoned. With completion of the remaining three perimeter sumps (#19, 22, and 24), Bridgeton Landfill has now installed all 25 of the perimeter collection sumps needed for their new interim capping system. Bridgeton Landfill will be moving forward with installation of the new EVOH capping system on the South Quarry to help reduce odors.
