

APPENDIX D. 2002 AREA SOURCE INVENTORY AND DOCUMENTATION

Table D-1 lists the source of the emissions estimate for each Source Classification Code (SCC) included in the 2002 base year area source inventory for the St. Louis nonattainment area. “MDNR 2002” indicates that MDNR APCP developed the emissions estimate based on methods and data in the document *Missouri Statewide Estimates for the 2002 National Emissions Inventory (NEI): Area Sources* that is included in this appendix. The emissions estimates for the prescribed burning SCCs marked with “CENRAP 2002” were developed for the Central Regional Air Planning Association (CENRAP) by Sonoma Technology. The methods and data used in the prescribed burning inventory are described in Sonoma Technology’s report *Research and Development of Planned Burning Emission Inventories for the Central States Regional Air Planning Association* (July 30, 2004) that is included in this appendix. The remaining SCCs flagged as “EPA 2002,” “EPA 2000,” or “EPA 1999” were developed by the EPA for calendar year 2002, 2000, or 1999, respectively. More information on the methods and data used by the EPA can be found on EPA’s Clearinghouse for Inventories & Emissions Factors (CHIEF) website: <http://www.epa.gov/ttn/chief/net/2002inventory.html>. In work completed for CENRAP, Pechan consolidated the area source inventory from all data sources, conducted additional quality assurance, and made corrections and revisions where needed. Pechan’s work is described in detail in the two reports in Appendix B. Ozone season weekday emissions for all area source SCCs were calculated from the annual emissions estimates using the procedures described in Appendix C. The complete 2002 area source inventory for the St. Louis nonattainment area by county and SCC is included in Table D-2.
