- Conduct an initial health profile.
  
- Risk assessment based on monitoring data.
  - What contaminants?
  - How could people be exposed?
    - Exposure routes.
  - How much would they be exposed to?
    - Estimate dose.
  - What would be the adverse effects?
    - Characterize risk.
  - Are these risks acceptable or not?
  
- Monitoring limits based on risk assessment.
  - As long as the findings are within the limits, then it is ok.
  - If the findings are outside the limits, then it may trigger the following:
    - Corrective Action.
    - Additional Monitoring.
    - Health Profile for Assurance.
