

E R R A T A
Draft Departmental Risk-Based Corrective Action Technical Guidance
Missouri Department of Natural Resources

Issue Date: November 7, 2006

Errata notice applicable to June 2006 Version of Appendix B
Appendix B, Table B-1
Default Target Levels

In all cases, Table B-1 must represent the lowest target levels (Default Target Levels or DTLs) for any particular chemical of concern of all soil types and all pathways. The following corrections are for errors where the lowest risk-based target level is not represented in Table B-1.

Vinyl Chloride

Table B-1, Page 5 of 8: The table contains values for both the occupational scenario and the residential scenario. Listing an occupational scenario for vinyl chloride is an error, and these values should not be used at the default level. The appropriate DTLs for this chemical are the values that are listed as the residential scenario. The correct DTLs and pathways are:

	Soil	Groundwater
Vinyl chloride	1.92E-02 GWP	2.00E-03 DWG

Total Petroleum Hydrocarbons: TPH-GRO and TPH-DRO

Table B-1, page 8 of 8: The table contains incorrect values for the totals of the petroleum hydrocarbons, and it does not list the pathways from which the lowest target level was derived. The correct DTLs and pathways are:

	Soil	Groundwater
TPH-GRO	3.85E+02 INH	1.81E+01 DWG
TPH-DRO	4.15E+03 INH	3.43E+01 DWG
