# Missouri Department of Natural Resources

## Solid Waste Management Program

### I. Requirement for Report to the General Assembly

This report provides a comprehensive accounting of the use of the scrap tire funds provided by the 50 cent fee charged on the sale of new tires. The report details the efforts of the Department of Natural Resources and its partners to cleanup scrap tires throughout Missouri and meets the department's scrap tire activity reporting requirements pursuant to the Solid Waste Management Law, Chapter 260, RSMo. The statute setting forth the requirement for the report is found at 260.273.8., RSMo, which states:

“By January 1, 2009, the department shall report to the general assembly a complete accounting of the tire cleanups completed or in progress, the cost of the cleanups, the number of tires remaining, the balance of the fund, and enforcement actions completed or initiated to address waste tires.”

The department gratefully acknowledges the assistance of the Scrap Tire Advisory Group in putting together this information.

#### Why Do We have a Scrap Tire Program?

Scrap tires are a dangerous fire hazard and breeding ground for mosquitoes. On March 11, 2005, an illegal tire dump in Polk County containing an estimated 750,000 tires blazed for several months in an abandoned quarry near Bolivar. Nineteen area fire departments, mostly volunteers, battled the blaze for days before deciding to let the fire burn out by itself. The fire burned so intensely that some equipment and hoses used by the firefighters were destroyed by the heat.

Some mosquitoes may carry the West Nile virus. Missouri had its first documented human cases of West Nile virus in 2002. Since that time, 58 percent of Missouri's 114 counties have had documented human cases.

Once a scrap tire pile begins to burn it is difficult to extinguish and thus can smolder for months. Fires from scrap tires release hazardous substances into the air. When the oil melts from the tires, it can seep into groundwater sources creating environmental problems. Intense fires leave tremendous scarring on the land.

## II. Program Milestones

**1990** – SB 530 establishes the 50 cents per retail tire fee to fund the Waste Tire Subaccount of the Solid Waste Management Fund. Fee revenue allocations are based on the following percentages:

- 90 percent- program operation costs, market development or incentive grants for products derived from waste tires, and removal of waste tires from illegal tire dumps; and
- 10 percent- educational programs and curriculum regarding solid waste management.

**1999** – SB 426 extending the fee through January 1, 2004.

**2003** – Several bills are introduced to extend the fee. None pass.

**2005** – SB 225 reinstates the fee. “Waste tire” references in the legislation are changed to “scrap tire”. Fee collections began in October 2005. The expiration date of the fee is January 1, 2010.

**2008** – Cleanups to date result in removal of over 15,000,000 scrap tires from Missouri’s environment.

**1995** – SB 60 and SB 112 changed the fee revenue allocations in the Waste Tire Subaccount to:

- 65 percent- tire clean up costs with “innocent party” sites given first priority;
- 25 percent- program operation costs;
- 5 percent- educational programs and curriculum regarding solid waste management; and
- 5 percent- grants.

**2002** – Department implements cost sharing strategy.

**2004** – Several bills are introduced to extend the fee. None pass.

**2006** – Department implements Tire Dump Roundup Program.

### III. Program Initiatives

The department uses a variety of mechanisms to remove tires from the environment and deter further illegal dumping. This section of the report details several strategies the department and its partners use to protect Missouri's natural resources and public health. The following chart details the remaining scrap tires to be cleaned up from known sites and the scrap tires actually cleaned up in SFY 2006, SFY 2007, and SFY 2008.

#### Tire Dump Roundup

Since November 1, 2006, the department has offered scrap tire cleanups at no cost to the landowner for dump sites containing between an estimated 500 and 10,000 tires. (Note: The entry of sites into this program is based on an estimate of the number of tires; as cleanups were completed, some dump sites were determined to have in excess of 10,000 tires.) Active businesses and prior cleanup recipients are ineligible for the tire dump roundup initiative. Landowners are required to sign an access agreement allowing the Department of Corrections, Division of Rehabilitative Services, Missouri Vocational Enterprises (MVE) right of entry to the property containing the scrap tire dump site. Since 2006, department staff has negotiated a total of 127 access agreements.

- For sites with less than 500 tires, the department works with charitable, fraternal, and other nonprofit organizations to complete the necessary cleanup work. Upon submission of reimbursement paperwork documenting appropriate disposal, the organization receives payment for their work.
- Additionally, for sites with less than 500 tires, the department has begun working with Missouri's twenty solid waste management districts and directly with counties and cities to establish staging areas. With increased transportation costs, staging areas have proven to be a cost effective alternative allowing for the removal of tires from a single location rather than requiring MVE to drive between

multiple locations to remove small numbers of scrap tires.

To date, a total of 536,749 tires have been cleaned up from 127 reported Tire Dump Roundup sites statewide. The following map shows all tire sites cleaned up using monies since the reinstatement of the scrap tire fee in January 2006. (See Appendix B for more detailed information.)

### Scrap Tire Roundup Cleanups From January 2006 through November 2008

### Cost Sharing

On November 1, 2002, the department implemented the “20,000 strategy” for larger sites. To date, 143 sites with a total of 711,582 tires have been cleaned up through the 20,000 strategy.

The 20,000 strategy began providing a cost-sharing alternative as an incentive to bring landowners into the cleanup process. Cost sharing allows individuals to agree to reimburse the Scrap Tire Subaccount for approximately ten percent of the total cleanup costs (as determined by the

department) for removal of scrap tires from the dump site located on the individual’s property. The following table outlines what is required for different types of landowners.

**Matrix for Cost Sharing Initiative**

Type of Site	Settlement Agreement	Access Agreement	Cost Recovery	Penalty Assessed
Non-Responsible Party – landowner not responsible for the creation of the illegal dump (using criteria established by the department.)	No	Yes	No	No
Responsible Party – privately owned property that is not used for business purposes where the landowner dumped or allowed the dumping of the tires.	Yes	Yes	Yes	No
Responsible Party – tire industry members who should have systems in place to properly dispose of the waste tires they generate.	Yes	Yes	Yes	Yes
Responsible Party – Case referred to the Attorney General’s Office (AGO).	Yes	Yes	Yes	Determined by AGO

For SFY 2006 through SFY 2008, cost recovery funds were deposited into the Scrap Tire Subaccount as follows: SFY 2006 -- \$26,565; for SFY 2007 -- \$80,016; and for SFY 2008 -- \$15,984.

**Enforcement Actions**

Department staff enforces laws regulating the handling, storage and disposal of scrap tires. Currently, there are 30 state permitted tire businesses that are held to strict standards to ensure proper disposition of tires and avoid illegal dumping. These businesses include scrap tire processors and end users, such as utility plants and cement kilns. Additionally, regulations for tire hauling and disposal have been strengthened and the department reviews the records of tire haulers regularly to ensure compliance. There are 75 tire haulers permitted by the state.

For sites created by active businesses, the department uses formal enforcement actions to pursue cleanups. Since January 1, 2006, the following enforcement actions have taken place:

**Enforcement Actions  
From January 1, 2006 to Present**

**Note:** Enforcement Actions in Progress include ongoing cases prior to January 1, 2006.

## IV. Achievements

### Cleanups Completed

As of September 30, 2008, a total of 15,211,133 tires have been cleaned up from 818 reported sites, state-wide.

The following map shows all tire sites cleaned up using monies from the Scrap Tire Subaccount. (For more detailed information, see Appendices A.1 through A.4.)

### All Scrap Tire Sites and Tires Cleaned Up

## V. Costs of Cleanups and Fund Balance

### Costs of Cleanups

Following reestablishment of the scrap tire program in 2006, costs associated with tire cleanups have consistently increased. In the long term, costs associated with tire cleanups are likely to continue to increase due to inflation and increased transportation costs.

Sites having larger numbers of scrap tires have proven to be less costly per tire cleaned up than sites with fewer scrap tires or smaller sites that are spread across larger areas because larger sites result in economies of scale (i.e., lower fuel costs – fewer miles chargeable and lower labor costs – hours spent collecting fewer tires over more acreage). The difference in cost per scrap tire cleaned up (44 cents versus 18 cents per tire) between 2006 and 2007 was the result of a very large tire cleanup completed in 2007.

For large sites, the department has used the state bidding process to obtain private cleanup contractors. For individual sites with less than 10,000 scrap tires and for small combined sites, the department executed a Memorandum of Agreement with MVE to conduct the cleanups. For dumps with less than 500 scrap tires, the department has been successful in recruiting and reimbursing nonprofit organizations to conduct cleanups in their local areas as well as conducting cleanups through partnerships with cities, counties and the solid waste management districts to create staging areas where MVE can place collection trailers.

### DNR Staff Cost Per Scrap Tire Cleaned Up

SFY 2006 Actual	SFY 2007 Actual	SFY 2008 Actual
\$0.44	\$0.18	\$0.47

The table below shows the increase in cleanup costs since reinstatement of the program through October 31, 2008.

### Cleanup Costs CY 2006 through October 2008

Calendar Year	Number of Sites	Total Cost	Total Tires	Average Cleanup Cost
2006	26	\$1,692,419	1,224,871	\$138/ton or \$1.38/tire
2007	70	\$ 939,349	381,422	\$246/ton or \$2.46/tire
2008 (1/1/08-10/31/08)	66	\$ 823,154	319,376	\$258/ton or \$2.58/tire
<b>Totals</b>	162	\$3,454,922	1,925,669	

The following table shows costs for sites cleaned up by non-profit organizations from the reinstatement date of the program through October 31, 2008.

**Costs of Non-Profit Organization Cleanups CY 2006 Through October 2008**

Calendar Year	Number of Sites	Total Cost	Total Tires	Average Cleanup Cost
2006	8	\$24,712.21	6,714	\$368/ton or \$3.68/tire
2007	7	\$20,868.55	23,635	\$ 88/ton or \$ .88/tire
2008 (1/1/08-10/31/08)	12	\$16,393.70	13,114	\$125/ton or \$1.25/tire
<b>Totals</b>	27	\$61,974.46	43,463	

**Scrap Tire Subaccount Activity and Fund Balance**

Currently, revenue from scrap tire fees is allocated based upon the following percentages:

- 65 percent - tire clean up costs with “innocent party” sites given first priority;
- 25 percent - program operation costs;
- 5 percent - educational programs and curriculum regarding solid waste management; and
- 5 percent - grants.

For the state fiscal periods ending June 30, the fund balance of the Scrap Tire Subaccount was as follows: SFY 2006 -- \$1,518,466; for SFY 2007 -- \$1,517,117; and for SFY 2008 -- \$2,066,383.

The Scrap Tire Subaccount is a self-sustaining fund. As illustrated by the following chart, new tire fees are not received at a constant rate, but rather sporadically, a fund balance is needed to allow for program continuation and to prevent delays in making timely reimbursements to organizations providing clean ups or receiving grants and to meet program operation’s payroll and associated expenses.

## Scrap Tire Subaccount Expenditures

### SFY 2006 Actual Expenditures

The scrap tire fee was reinstated during SFY 2006. Collections of the fee by tire retailers began in October 2005 and began being deposited into the Scrap Tire Subaccount beginning in February of 2006. Therefore, the above expenditures for SFY 2006 are not for an entire fiscal year's activities.

### SFY 2007 Actual Expenditures

Scrap tire surfacing material grants were awarded during SFY 2007. The majority of grants are awarded in one state fiscal year and the grantee completes the project and is reimbursed in the next fiscal year. Of the eleven grants awarded during this period, only one grant was reimbursed during this period. Program operation expenditures are not reflective of full staffing for an entire fiscal year.

### SFY 2008 Actual Expenditures

Program operation expenditures reflect actual staffing costs (i.e., some vacancies occurred during this state fiscal year).

### SFY 2009 Planned Expenditures

**Estimated program operation expenditures include full staffing costs for the entire state fiscal year.**

## VI. Scrap Tire Market Overview

Nationally, end-use markets are consuming about 85 percent of the scrap tires produced in the United States.

According to the Rubber Manufacturers Association (RMA) the national increase in consumption of tire derived fuel (TDF) is a function of three factors:

- Increased demand for alternative fuels due to elevated energy prices;
- Continued improvement in the quality and consistency of TDF; and
- More reliable delivery of a consistent TDF product.

With implementation of new federal air pollution regulations, changes have been necessary in the types of pollution control equipment used by utility plants. The utility plants became concerned the catalyst systems often a part of the new pollution control equipment would become damaged by wire contained in some types of TDF. It is believed these concerns led to decreased usage of TDF in Missouri during the past two years. It is unknown if TDF usage will revert back to previous levels as the industry researches and addresses these concerns.

The market demand for civil engineering applications of other types of scrap tire materials, such as light weight fill, drainage systems and septic drain systems remain a function of three factors:

- Cost competitiveness of tire shreds compared to traditional construction materials;
- Increased acceptance by regulatory agencies; and
- Increased recognition by scrap tire processors of market opportunities available in civil engineering applications.

The ground rubber market has increased by 75 percent using two particle size classes; ground and coarse. The greater market growth has been with the coarse particles and this is the material used in playground surfacing and running track material. One of the primary uses of ground particles is in rubber modified asphalt.

Agricultural and miscellaneous uses have remained consistent.

## VII. Scrap Tire Surfacing Material Grants

The scrap tire fee also funds a department-administered grant program promoting the use of scrap tires as surfacing material. To date, 289 grants have been awarded with \$1,563,946 paid to grantees with 9,925 tons of tire material used.

The grant program promotes the use of rubber mats and pour in place material or shredded material made from scrap tires for surfacing areas such as playgrounds, running tracks, walking trails, weight rooms or other surfacing projects approved by the department.

Grant recipients requesting rubber mats or pour in place rubber material are eligible to receive up to \$10,000 while those requesting shredded material are eligible to receive up to \$5,000. Prior recipients of scrap tire material grants are ineligible during new grant cycles. Applicants currently may receive only one scrap tire material grant award and awards are made on a competitive basis. Grant cycles through 2008 did not require matching funds. In order to help stimulate the scrap tire material market, beginning with the 2009 grant cycle, the department is planning to give extra points to applicants that provide match.

Public schools, private schools, parks, non-profit day care centers, other non-profit organizations, and some governmental organizations are eligible to submit applications. (State agencies are not eligible.)

All grantees are required to purchase scrap tire material from manufacturers whose scrap tire material contains at least 40 percent Missouri generated scrap tires. All projects are required to be located within Missouri.

The following map shows surfacing material grants awarded from the original waste tire fund beginning in SFY 1994 and continuing through SFY 2003 and those grants awarded since reinstatement of the tire fee in SFY 2007 and SFY 2008. (Appendix D contains more detailed information.)

## Scrap Tire Surfacing Material Playground Grants

## SFY 2008 Scrap Tire Surfacing Material Playground Grants

<u>Grantee</u>	<u>County</u>	<u>Grant Award Amount</u>
West Plains R-7 Elementary	Howell	\$ 10,000
Republic Early Childhood Center	Greene	\$ 10,000
Fairfax R-3	Atchison	\$ 10,000
West Plains R-7 Middle School	Howell	\$ 10,000
Platte County R-3 Pathfinder Elementary	Platte	\$ 10,000
A.D. Stowell Elementary, Hannibal District	Marion	\$ 5,000
Miller R-II Schools	Lawrence	\$ 10,000
City of Raytown Parks & Recreation	Jackson	\$ 10,000
Lafayette County C-1 Grandview Elementary	Lafayette	\$ 10,000
City of Memphis	Scotland	\$ 10,000
		\$ 95,000

## VIII. Number of Scrap Tires Remaining

Following is a map detailing the number of known scrap tire sites remaining to be cleaned up as of October 31, 2008. (For more information, see Appendix C.1 and C.2.)

### Remaining Scrap Tire Sites and Tires

**S**olid Waste Digest in a 2008 report stated that “While scrap tire management is one of the waste industry’s success stories, it will not always remain so if the vast advances of the last decade are taken for granted. The next ten years will be critical if the scrap tire industry is to build on the gains it has already achieved.”

### What Happens if the Scrap Tire Fee is not Renewed?

With current inspection and enforcement oversight, the department estimates 5% or approximately 250,000 of the scrap tires generated each year in Missouri continues to be illegally dumped. The following chart provides a comparison of the department's estimate of the number of illegally dumped tires that would likely occur between SFY 2011 and SFY 2015 if the fee is not renewed. These estimates are based on the number of scrap tires illegally dumped during the previous fee lapse period which occurred in SFY 2004 and SFY 2005.

## Appendix A.1

### Private Contractor Cleanups – As of October 31, 2008

<u>Site Name</u>	<u>Resolved</u>	<u>Type</u>	<u># of Tires Cleaned Up</u>	<u>Total Paid</u>
Backer Properties Limited Partnership	Y	PVT/RFP	3,657	\$2,450.00

**TOTALS**                      311                                              \$9,106,388                                              4,752,221

Note: The Total Number of Tires Cleaned Up (4,752,221) includes all tires cleaned up from sites where MDOC/MVE was used. In the case of Recycling Industries of MO, the private contractor did not clean up all tires and partial and shredded tires totaling approx. 39,393 tires that were subsequently cleaned up by MVE. These tires (39,393) and 744 other misc. tires cleaned up by MDOC/MVE are included in the Totals above.
