

2.3.2.1 Permitting Framework and Scope/ Permit Program Areas/ Industrial Sources/Categorical Industries

Applicability:

The Missouri Effluent Regulations require industrial, agricultural and other non-domestic water contaminant sources, point sources or wastewater treatment facilities to meet the applicable control technology currently effective as published by the U.S. EPA in 40 CFR 405-471. The facilities that must meet these requirements are commonly referred to as Categorical Industries.

Content:

Department of Natural Resources Regulation, 10 CSR 20-7.015(9)(G)1, adopts by reference the federal effluent regulations for industrial sources. Each of the 56 categories of industry addressed in the federal regulations has applicable technology-based effluent standards. These categorical standards include limits for Best Practicable Control Technology (BCT), Best Available Control Technology (BAT) and New Source Performance Standards (NSPS).

The North American Industry Classification System (NAICS) is being phased into many federal programs to replace the older Standard Industrial Classification system (SIC). Both systems standardize categories for industry and assign a unique number to each category. The categorical industry effluent limitations reflect the SIC system since it is still in use in the NPDES Program. Permit application forms for industries (and all facilities) require the SIC Code.
