

Chapter 8 Standard Conditions of NPDES Permits

Applicability:

Depending on the type of permit, Standard Conditions Part I, Part II, or Part III may be included. Standard Conditions Part I must be included with all permits.

Content:

There are three components to the Standard Conditions: Part I, Part II, and Part III. A copy of all of the standard conditions can be found on the Final Site Specific page of the Water Protection Control Branch web page (see Other Links below).

[Standard Conditions Part I](#) contain the general conditions required in all permits. Part I describes monitoring and reporting requirements and management requirements.

[Standard Conditions Part II](#) contains specific conditions for Publicly Owned Treatment Works (POTWs). Part II contains conditions for POTWs to receive industrial wastewater. The only permits that require Standard Conditions Part II are POTW permits.

[Standard Conditions Part III](#) contains conditions about sludge and biosolids from domestic wastewater treatment plants. Part III describes the handling of sludge and biosolids whether it is land applied, hauled to another permitted facility, land filled, incinerated, or stored in a surface lagoon. Part III also contains sludge facility closure, monitoring, record-keeping and reporting requirements. Part III is to be included on all domestic wastewater treatment facilities permits (both private and public).

Some generalizations can be made about when to require a specific set of standard conditions. For a POTW, the permit writer must include standard conditions Part I, II, and III. A private domestic wastewater treatment facility (e.g. a subdivision) permit must include Standard Conditions Part I and III only. A general permit for storm water will only include Standard Conditions Part I.
