CITY OF WELLSVILLE, MO  
Wastewater Treatment Improvements

The Wellsville Wastewater Treatment improvements project consists of improvements to the wastewater treatment facility and collection system. The purpose of the project is to make the necessary improvements to enable the city to operate a wastewater system that meets clean water quality standards and provides reliable wastewater service.

The wastewater treatment plant improvements include the rehabilitation of approximately 1,600 linear feet of sewer line, the construction of a new sewage lift station, the rehabilitation of the current Southwest Lagoon to serve as a stormwater storage and surge basin, closure of the remaining two lagoon cells at the Southwest Lagoon and the construction of a new Submerged Attached Growth Reactor (SAGR) wastewater treatment facility with disinfection system with all necessary appurtenances.

A Clean Water State Revolving Fund (CWSRF) loan in the amount of $595,000 and a grant in the amount of $1,555,159 will be used to fund a portion of the project. Other fund sources totaling $501,208 will be used by the city to complete the project.

The project is necessary to enable the city to operate a wastewater system that meets the effluent limits and requirements of Missouri State Operating permit number MO-0050695 and protect waters of the state.

For additional information please contact Mayor Howard Steele at Wellsville City Hall, telephone (573) 684-2184.

This project is administered by the Missouri Clean Water State Revolving Fund.

Project Cost: $2,651,367  
Completion Fall 2017

This project funded wholly or in part by the Missouri Department of Natural Resources and the U. S. Environmental Protection Agency.
