

MISSOURI GEOLOGICAL SURVEY

May 9, 2019

Connie,

Below is a short summary of our issue that we would like included in the board members' info packets for the May meeting. Thank you.

Central States Water Resources (CSWR) has requested this opportunity to speak to the board members to discuss the recent approvals of variances occurring at Indian Hills allowing homeowners to drill private wells on their property without the proper setback distances from property lines, septic systems, etc. as required by the state. CSWR owns and operates the private water system at Indian Hills that provides water to these homeowners and therefore would like to discuss these recent approvals that are impacting our operation of the system now and in the future.

Jacob O. Freeman, PE
