Note from the Branch Chief

The Public Drinking Water Branch of the Missouri Department of Natural Resources has an important mission to ensure safe drinking water to every visitor and resident of Missouri by regulating public water systems. The purpose of this report is to let readers know how water systems in Missouri are performing. The report is the eleventh Annual Compliance Report and covers calendar year 2006. The branch is providing the report to the U.S. Environmental Protection Agency (EPA) for inclusion in a national report summarizing the performance of the nation's drinking water supplies.

In 1974, Congress passed the Safe Drinking Water Act, the first national legislation regulating drinking water. Under this law, states may seek primacy, or approval from EPA to administer a Public Water System Supervision Program. To receive primacy, states must meet certain requirements laid out in the Safe Drinking Water Act, including adoption and enforcement of drinking water regulations at least as stringent as federal regulations. EPA granted primacy to the State of Missouri in 1979. In 1996 Congress amended the Safe Drinking Water Act to require states to provide an annual report to the public on public water systems' violations of safe drinking water regulations.

The branch provides this report not only to comply with statutory obligations mandated by the Safe Drinking Water Act, but also to focus attention and provide an understanding of the importance of quality drinking water.

A handwritten signature in black ink, appearing to read "Steve Sturgess", written on a light-colored, slightly textured background.

Steve Sturgess, Chief
Public Drinking Water Branch
Missouri Department of Natural Resources

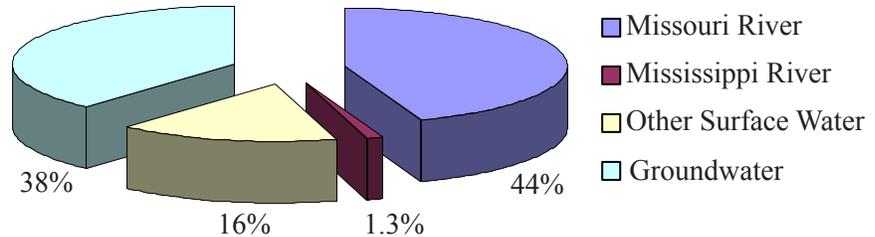

The Missouri Public Water System Universe in 2006

A Public Water System is defined as a system that provides water through piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. Water testing at systems serving fewer people than this is facilitated by local and county sanitarians and the Missouri Department of Health and Senior Services, rather than the Department of Natural Resources.

There are three types of PWSs: community, non-transient non-community and transient non-community. Examples of community systems include towns, water districts, subdivisions, mobile home parks and residential facilities such as nursing homes or prisons. Non-transient non-community systems serve the same people every day, but not in a residential setting; schools and factories are good examples. Transient non-community systems serve different people daily, such as restaurants, resorts and rest stops. These smaller systems are typically in rural areas where it is not feasible to hook up

to a city or water district. The requirements for construction, operation, monitoring, etc., vary among systems based on their type, size, and source of water.

Source of Water (Percent Population Served)

In 2006, there were 2,771 active PWSs in Missouri. Of this total, 1,487 were community, 245 were non-transient non-community and 1,039 were transient non-community systems.

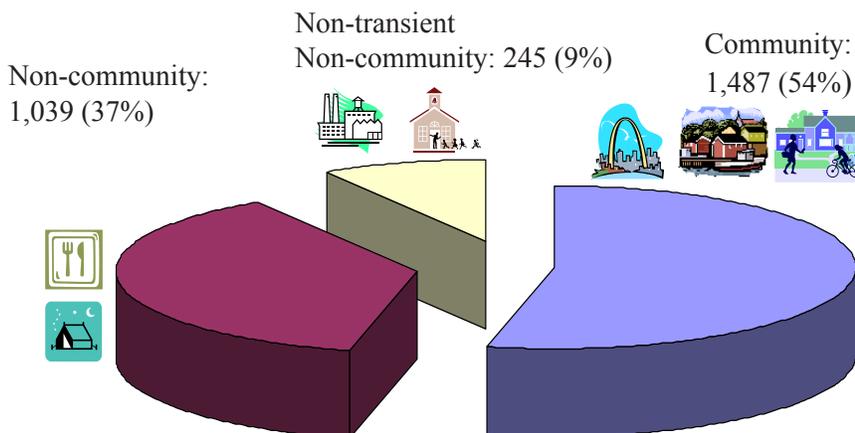

The community water systems in Missouri served more than 5 million citizens in 2006. These citizens benefit from one of Missouri's most outstanding resources: its water. There is generally a large quantity of high-quality water in Missouri. By far the largest source of drinking water for Missourians is surface water from the Missouri River. The abundant supply of water in the Missouri River and its proximity to the state's major population centers make the use of this river as a source so popular.

Historically, more people used to get their drinking water from the Mississippi River than they do now. Several intakes on the Mississippi River are no longer in use.

Groundwater is the next most used source of drinking water for Missouri's community supplies. In southern Missouri good quality groundwater is easy to obtain and typically requires very little treatment to be used for drinking water.

Some groundwater systems have the best of both worlds and use alluvial wells in valleys of the Missouri and Mississippi river system where they can get large volumes of water free of surface contaminants. Wells in the Missouri River alluvium provide groundwater to a significant population. More than half the state's population get their drinking water from the Missouri River or its alluvial wells. The importance of this resource cannot be overstated.

2006 Public Water System by Type

Analysis of Compliance by Public Water Systems in 2006

We expect a lot from our public water systems and require testing for more than 90 different regulated chemicals and microbiological contaminants during the year. A system is to be applauded for performing all required testing and meeting all maximum contaminant level (MCL) standards. When MCL violations do occur, that often is the first identification of a

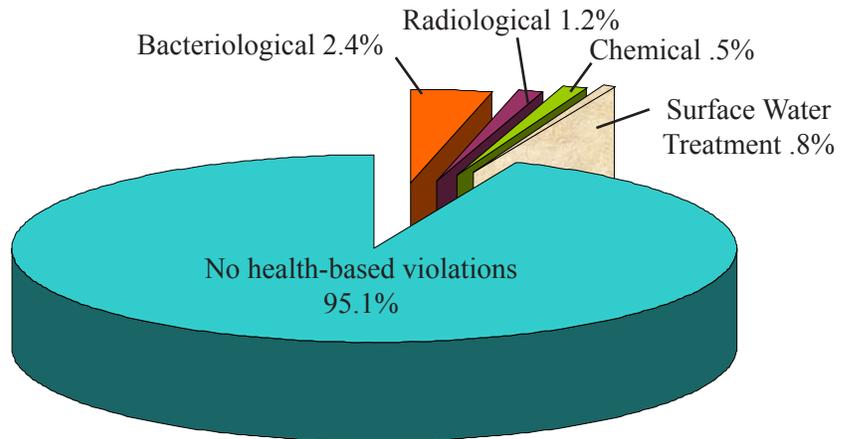

problem and can be the first step toward correcting it. Many public water systems perform testing beyond what is required by the state.

The Summary of Violations tables are counts of individual violations. Appendices A through D list specific systems by county. Each PWS has the potential to accumulate multiple violations during the year because there are multiple regulations involved and some monitoring is on a monthly schedule

For example, the monitoring requirements for the Total Coliform Rule alone create a potential for more than 30,000 violations. This puts some perspective on the violation figures shown in the tables. Another factor is the number of systems that have violations. Many of the violations are from water systems with problems that result in multiple violations during the year, while other systems may only have one or two violations. The department uses various methods to focus on the water systems that need attention.

The Missouri Department of Natural Resources and the U.S. Environmental Protection Agency use a process called Significant Non-Compliers to focus attention on the water systems with problems that are considered significant. These are the systems with serious viola-

Percent Population of Community Water Systems Meeting Health-based Standards

tions that potentially affect public health or with multiple monitoring violations. Appendix D gives the list of Significant Non-Compliers. Some of the systems listed, however, may have already resolved these problems.

During 2006 there were 88 systems on the list. This is down from 143 systems in 2005, a reduction of 38 percent. This means 2,683 of the 2,771 public water systems, or 97 percent, were not significant violators in 2006.

Those systems listed as Significant Non-Compliers typically serve a small population. They accounted for 3 percent of public water systems, but only 1 percent of the population served.

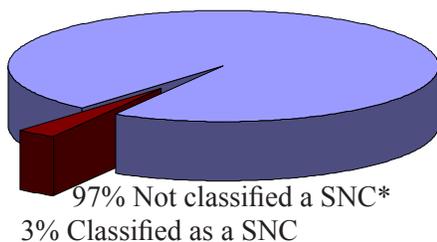

Maximum contaminant level and treatment technique violations rep-

resent the most significant impact on the public health. These occurred at a small number of public water systems serving less than 5 percent of the population.

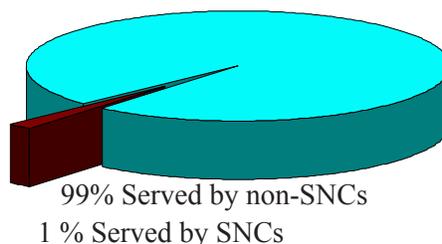

In 2006, Missouri community water systems met EPA's target of serving water that meets all health-based standards to 95 percent of the population. EPA set this target for states to reach by 2008. Since 1996, when the first Annual Compliance Report was produced, through 2003 the results for Missouri have been consistently at or above this target, though they may vary slightly from year to year. The small dip below the 95 percent target in 2004 and 2005 did not represent a reduction in water quality, but is a result of more stringent drinking water standards.

The majority of MCL and monitoring violations were for failure to meet the requirements of the Total Coliform Rule. All public water systems in the state must test for this type of bacteria every month they dispense water to the public. Monitoring violations are by far the most common. The department is particularly concerned when monitoring violations occur at public water systems that have

Significant Non-Compliers

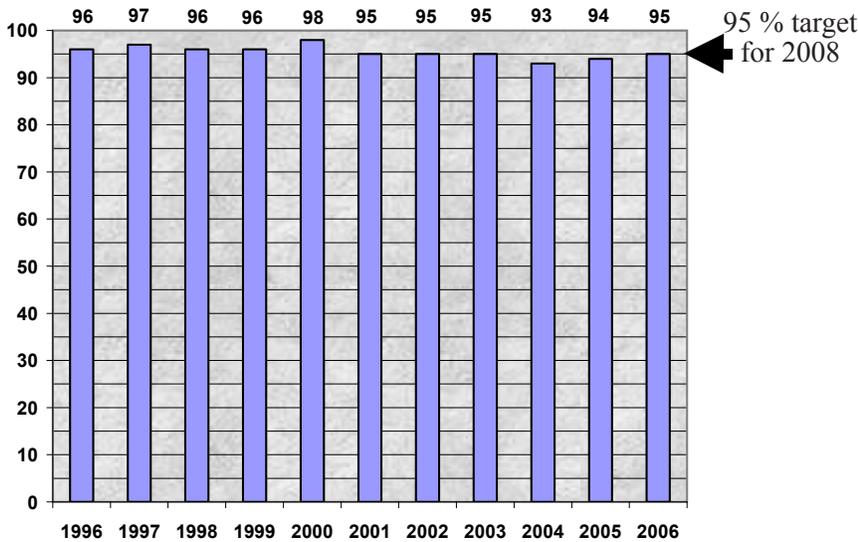

Percent of Population Served by Significant Non-Compliers

* Significant Non-Complier

Drinking Water Trends

a history of bacteriological contamination. Adequate testing is the only way to know for sure if the problems have been corrected or have reoccurred.

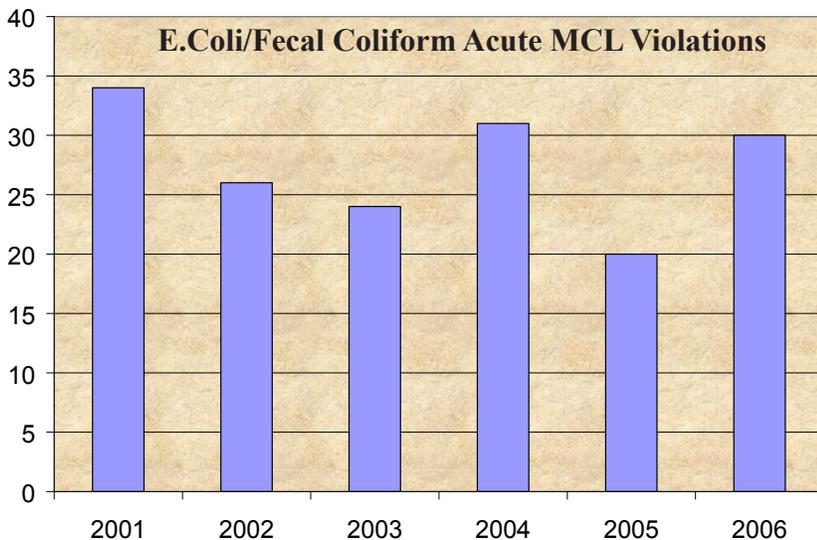

For the Total Coliform Rule, the Public Drinking Water Branch reports the following summary for the year 2006 in comparison to 2005.

- MCL violations for total coliform bacteria decreased 8 percent from 425 to 390.
- Acute MCL violations for fecal coliform/E. coli increased 50 percent from 20 to 30.

- Major monitoring violations increased 3 percent from 787 to 807.

In 2006 only one percent, 28 out of the 2,771 public water systems in the state, had acute violations for fecal coliform or E. coli. (Two of these 28 systems had two acute MCL violations each during the year, resulting in a total of 30 acute MCL violations.)

Another way to look at the number of acute MCL violations is to compare the number that actually occurred to the number possible. Since bacteriological testing is

required monthly, the 2,771 water systems had a total of 30,148 chances to get an E. coli MCL violation. The 30 that actually occurred represent only one tenth of one percent of the number possible. While these acute violations can be serious, they are rare.

Some people, however, may be more vulnerable to water-borne illness than the general population. To educate the public on this issue, all community water systems were required to make their 2006 Consumer Confidence Report available to customers by July 1, 2007. Each report must include the following warning:

“Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and CDC (national Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.”

The Consumer Confidence Report provides detailed information about the specific community water system, while this report does

not. Much of this Annual Compliance Report contains statistics and summary information with listings of health-related and chronic monitoring violations. The majority of systems do not have violations and are therefore not listed in this report. The Consumer Confidence Report provides customers with information about their own drinking water and health. It includes specifics about their water system, including the source of drinking water and the levels of naturally occurring substances in drinking water. Usually these pose no health threat and are not violations. The report must list violations of state and federal requirements for that year.

Customers of larger water systems had an individual report mailed to them or saw it published in the local newspaper. The largest systems, those serving 100,000 people or more, must post their reports on the Internet. Smaller water systems may have posted the report in their office or a public building. Approximately 94 percent of the state's community water systems are complying with the require-

ment to produce and distribute Consumer Confidence Reports. Anyone can request a copy of their report from their public water system or by calling the department's Public Drinking Water Branch at 1-800-361-4827 or (573) 751-5331.

Compliance Activities: Preserving the Quality of Drinking Water

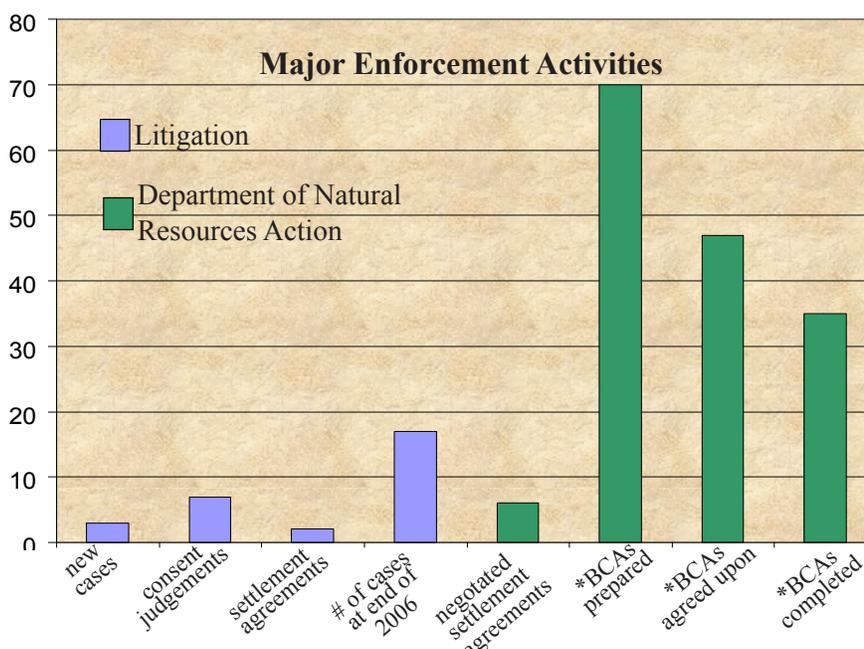

The department works closely with violators to return them to compliance in a timely manner. This includes phone contacts, on-site inspections, meetings with owners or operators and technical assistance as needed. For the more serious violations, a Bilateral Compliance Agreement between the water system owner and the department is the tool used to move the system back into compliance. Bilateral Compliance Agreements are written agreements negotiated between and signed by the system owner and department staff. This process allows the department to determine the improvements the water system needs to make without either party having to endure the time and cost of litigation.

If a water system violates a Bilateral Compliance Agreement, the department implements a negotiated settlement policy. Negotiated settlement agreements are more formal and enforceable than Bilateral Compliance Agreements and are reviewed and signed by staff from the Missouri Attorney General's Office. If the negotiated settlement agreement is unsuccessful, the department refers the case for legal action through the courts.

Public Drinking Water Branch staff work in conjunction with other agencies to protect public health. By serving on a committee with staff from the Department of Health and Senior Services, the two agencies identify ways to support and benefit each other's activities. One of those areas is enforcement activity against facilities, such as restaurants, that are regulated by both agencies.

The department established the Field Services Division in August 2005, reflecting a focus on improving local services and proactively helping communities and facilities understand and meet environmental regulations. Fundamental to this new approach has been the development of Environmental Assistance Visits. These visits are an effective tool to help regulated facilities, providing an informal and scheduled walk-through of their permit requirements. Environmental Assistance Visits also allow field staff the opportunity to work with facility operators on technical and administrative issues if necessary.

The department provides training and technical assistance in an effort to prevent the occurrence of violations. Training is routinely provided to operators and owners

of public water systems around the state, primarily concentrating on the basic principles of running a water system, performing the required monitoring and preventing contamination of the system. Technical assistance in the form of phone contacts and on-site visits is also available to help water system operators avoid or correct problems. Staff in the department's five regional and 18 satellite offices carry out most of these activities.

For all violations, public water systems are required to notify the consumers they serve. The department provides all public water systems with the necessary forms and information to effectively notify the public. The method of notification varies by the violation and system type. Systems must report back to the department how the public notice was performed. Some violations, such as the confirmed detection of fecal coliform bacteria or E. coli, warrant immediate action due to the threat to public health. For such acute violations, the department requires systems to notify customers within 24 hours to boil water before consumption. Boil water orders remain in effect until the problem has been corrected and the water is safe to consume.

For Further Information

Information about Missouri's public water systems can be obtained by writing to the Missouri Department of Natural Resources, Public Drinking Branch, Water Protection Program, P.O. Box 176, Jefferson City, MO 65102 or calling 1-800-361-4827 or (573) 751-5331. Information is also available on the department's Web site at www.dnr.mo.gov/env/wpp/dw-index.htm.

Summary of Violations Table

The following definitions apply to the Summary of Violations table.

Filtered Systems: Water systems that have installed filtration treatment [10 CSR 60-4.055].

Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates and asbestos. These contaminants are naturally occurring in some water, but can get into water through farming, chemical manufacturing and other human activities. The department has established MCLs for 17 inorganic contaminants. [10 CSR 60-4.030].

Lead and Copper Rule: This rule established national limits on lead and copper in drinking water [10 CSR 60-15.010]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule for the following six categories:

- Initial lead and copper tap monitoring and reporting: A violation where a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.
- Follow-up or routine lead and copper tap monitoring and reporting: A violation where a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.
- Treatment installation: Violations for failure to install optimal corrosion control

treatment system or source water treatment system that would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in both categories].

- Lead service line replacement: A violation for a system's failure to replace lead service lines on the schedule required by the regulation.
- Public education: A violation where a system did not provide required public education about reducing or avoiding lead intake from water.

Maximum Contaminant Level (MCL): The highest amount of a contaminant allowed in drinking water. MCLs ensure drinking water does not pose a health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

Monitoring: The department specifies which water testing methods the water systems must use and sets schedules for the frequency of testing. A water system that does not follow the department's schedule or methodology is in violation [10 CSR 60-4.010].

States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period.

A major monitoring violation for the surface water treatment rule occurs when at least 90 percent of the

required samples are not taken or results are not reported during the compliance period.

Organic Contaminants: Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. The Missouri Department of Natural Resources has set legal limits on 54 organic contaminants that are to be reported [10CSR 60-4.040 and 4.100].

Radionuclides: Radioactive particles, which can occur naturally in water or result from human activity. The Missouri Department of Natural Resources has set legal limits on five types of radionuclides: radium-226, radium-228, uranium, gross alpha and beta particle/photon radioactivity [10 CSR 60-4.060]. Violations for these contaminants are to be reported using the following four categories:

- Gross alpha: A violation for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium.
- Combined radium-226 and radium-228: A violation for combined radiation from these two isotopes above MCL of five pCi/L.
- Uranium: A violation for Uranium above the MCL of 30 Micrograms/liter.
- Gross beta: A violation for beta particle and photon radioactivity from man-made radionuclides above four millicrem/year.

Surface Water Treatment Rule:

The surface water treatment rules (Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, Long Term 1 Enhanced Surface Water Treatment Rule) establish criteria under which water systems supplied by surface water sources, or groundwater sources under the direct influence of surface water, must filter and disinfect their water [10 CSR 60-4.055]. Violations of the surface water treatment rules are reported for the following categories:

- Monitoring, routine/repeat (for filtered systems): A violation for a system's failure to carry out required tests, or to report the results of those tests.
- Treatment techniques (for filtered systems): A violation for a system's failure to properly treat its water.

Total Coliform Rule (TCR): The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause a short-term health problem. If no samples are collected during the one-month compliance period, a significant monitoring violation occurs. States are to report four categories of violations:

- Acute MCL violation: A violation where the system found fecal coliform or E. Coli, potentially harmful bacteria, in its water, thereby violating the rule.
- Non-acute MCL violation: A violation where the system found total coliform in samples of its water at a frequency or at a level that violates the rule.

For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5 percent of the samples positive for total coliform violation.

- Major routine and follow-up monitoring: A violation where a system did not perform any monitoring. [One number is to be reported for the sum of the violations in these two categories.]
- Sanitary Survey: A major monitoring violation if a system fails to collect five routine monthly samples if sanitary survey is not performed.

Treatment Techniques: A water disinfection process that EPA requires instead of a MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

Unfiltered Systems: Missouri has required filtration of all surface water sources for many years. There are no unfiltered surface systems in Missouri and therefore no violations in this category.

Violation: A failure to meet any state or federal drinking water regulation.

Appendix C

1. Major Repeat Monitoring Violations

The following systems had major repeat monitoring violations for the months listed. A major repeat monitoring violation occurs when a routine sample tests positive for total coliform bacteria and that system fails to submit any follow-up, or repeat, samples as required.

County	ID#	System Name	Month(s)
Barry	MO5212349	Stars Dine In II	March
	MO5212461	Eagle Rock Stations And Viking #354	June
Benton	MO3210326	Hilltop Bar-B-Q	April
Camden	MO3198175	Captain Rons	May
	MO3212447	Jessies Place	February
	MO3212447	Jessies Place	December
Chariton	MO2010420	Keytesville	June
Christian	MO5102421	USFS-Cobb Ridge Rec Area	October
Franklin	MO6031090	Laura Meadows Apartments	June
Hickory	MO5212772	Beckys 254 Cafe	November
	MO5252773	Starlight Lane Subdivision	October
Jefferson	MO6036077	Lake Adelle Subd	July
	MO6048048	Country Aire Estates	July
	MO6048258	Stone Mill Creek	July
	MO6048258	Stone Mill Creek	May
Lawrence	MO5048020	Vaughn Trailer Park	January
Lincoln	MO6010866	Winfield	August
McDonald	MO5292748	Ganns One Stop	May
Miller	MO3048277	Palace Lane Estates	July
