   **STATE:** n.a.

   **CODE:** 08
The John B. Myers House, 180 Dunn Road, Florissant, Missouri, is a two-story, five-bay, 12-room, Classic Revival-style residence. L-shaped in plan, the house has a two-story rear (north) wing attached to the north wall of the main (south) portion. A portico dominates the main (south) facade. A one-story bay is attached to the west facade of the south portion.

**EXTERIOR**

**Over-all dimensions**

The house measures roughly 55' 3" by 39' 9". The main (south) portion is approximately 39' 9" by 31' 3"; the rear (north) wing measures 16' 3" by 24'.

**Construction materials and colors**

Basic construction materials are stone and brick: rough-cut, random-laid stone blocks for the foundations and bricks painted white and laid in common bond for the walls. The portico; window shutters, frames, and mullions; doors and doorway frames; and cornices are of wood painted white. The wood brackets and cast-iron rosette medallions of the cornice are painted dark green. Smooth-cut stone blocks form the window lintels and sills. Asphalt shingles cover the roofs. Wood shingles sheathe the wood-frame west bay and rear (east) entrance.

**Openings**

Windows. Rectangular-shaped, two-over-two light, double-hung sash windows occur on the first and second stories. Each is trimmed by a lintel and slipsill. Those on the east facade are blind and shuttered. Each side of the three-sided west bay has a rectangular, twelve-over-twelve light sash window. Basement windows are filled by rectangular-shaped, two-light sash and trimmed by a lintel.

Doorways. Main, rear, and basement entrances are on the south, east, and north facades respectively.

The main entrance, located in the center bay of the south facade, is filled by a double-leaf, wood and glass (three lights over a single panel) door topped by a one-light, rectangular transom. An Egyptian Revival-style surround trims the doorway.

**Chimneys**

Four chimneys service the Myers House. They are positioned flush with the wall surface at each end of the east and west facades of the south portion. All are of brick and have a single stack.

**Porches**

A two-story, three-bay, pedimented portico is centered across the south facade of the main portion. Paired square columns with molded capitals and
The John B. Myers House, 180 Dunn Road, Florissant, Missouri, demonstrates the remarkable persistence of the Classical Revival style of architecture into the Victorian era. Noteworthy for its elaborate detailing (ornate, two-story portico and extensive interior wall treatments), the house has survived in a relatively unaltered condition.

Previous owners
The most noted previous owners were the original owners/builders John B. and Adelaide Motten Myers.

In 1867 Myers purchased fifty acres of land less than a mile south of the old French town of St. Ferdinand (now Florissant). He had come to Missouri from Pottstown, Pennsylvania, and according to probate records had substantial land holdings in Calhoun County, Illinois. Myers was married to Adelaide Motten, a native of Alsace-Lorraine. They had three children: John, Jr.; Salena; and Zelda (born 16 days after her father's death in 1869).2

At John B. Myers' death, only the foundations and framework for the upper stories of the house were finished; Mrs. Myers is credited with completing the construction following her husband's plans.3

The survey of Missouri's historic sites is based on the selection of sites as they relate to theme studies in Missouri history as outlined in the "Missouri State Historic Preservation Plan." The John B. Myers House is, therefore, being nominated to the National Register of Historic Places as an example of the "Architecture" theme.

11. FORM PREPARED BY

NAME AND TITLE:
1. Nancy B. Breme, Research Associate

ORGANIZATION
Department of Natural Resources, State Historical Survey and Planning Office

STREET AND NUMBER:
P.O. Box 176

CITY OR TOWN:
Jefferson City

STATE: Missouri CODE: 65101

12. STATE LIAISON OFFICER CERTIFICATION

As the designated State Liaison Officer for the National Historic Preservation Act of 1966 (Public Law 89-665), I hereby nominate this property for inclusion in the National Register and certify that it has been evaluated according to the criteria and procedures set forth by the National Park Service. The recommended level of significance of this nomination is:

National [X] State [ ] Local [ ]

Name: James L. Wilson
Title: Director, Department of Natural Resources, and State Historic Preservation Officer

NATIONAL REGISTER VERIFICATION

I hereby certify that this property is included in the National Register.

7. Myers, John B., House

Pedestals support the second-story floor and the pediment. Balustrades connect the column pedestals.

Roofs
A truncated hip roof is over the south portion of the house; gable roofs cover the portico and rear wing.

Decorative features
Decorative details include: 1) lintels and sills (previously described); 2) a portico (mentioned above); 3) a boxed cornice with brackets and frieze decorated by medallions; and 4) the boxed cornice with brackets of the west bay.

INTERIOR

Basement
The full basement has three rooms: two under the south portion and one under the rear wing. The south rooms (each measuring approximately 28' 6" by 13' 6") are to either side of a central hall running in a north/south direction. The north room measures about 13' 3" x 22' 6". Ceiling heights are 8' 6" and 7' 6" in the south and north rooms respectively. All interior walls are of stone finished with plaster; floors are of concrete. The basement houses the furnace, provides storage space, and serves as a meeting place for fund raising activities ("cellar parties").

First floor
Six major rooms comprise the first floor: four in the south portion and two in the rear wing. The south rooms are arranged two to either side of a center hall running in a north/south direction. Each is approximately 14' 6" by 14' 6". North rooms include a kitchen and flower room. A bath opens off the north end of the center hall.

All rooms have painted plaster walls. Those on the east side of the south portion have "frescos" on the ceilings, cornices, and doors. Most rooms have individual fireplaces with wood mantels and original equipment for Franklin-type stoves. Random-width flooring and Classic-style wood base-boards and window and doorway trim occur in all rooms. Doorways are filled by four-panel wood doors with two-light, rectangular transoms above.

Access to the second floor is by a straight-run stairway along the east wall of the center hall. The newel post and balusters are of walnut.
Second floor
The second floor room arrangement echoes that of the first floor; most rooms have the same dimensions. The interior finishing is also similar: painted plaster walls, fireplaces in each room (an exception is the northernmost north room), and Classic-style trim.

Attic
Access to the attic is by a straight-run stairway similar to the first to second floor stairs in design and location. The unfinished attic is over the main portion of the house.

ALTERATIONS
Alterations include:
1. addition of "frescoes" on the ceilings, cornices, and doors of various rooms throughout the house (1886)
2. removal of "frescoes" in many rooms
3. replacement of the original tin roof with asphalt shingles
4. removal of a fifth chimney from the north wing
5. bricking in of the northernmost rear wing second floor doorway
6. addition of the west bay
7. removal of widow's walk on truncated hip roof of the main (south) portion
8. removal of rear two-story gallery and addition of enclosed entrance and two baths.

Local researchers date most of these alterations as occurring after 1930.

CONDITION
The Myers House is in good structural condition; repairs to the portico are nearing completion.

SITE
The house, which is atop a knoll overlooking I-270, faces south. Once part of a 50-acre farm, today approximately one acre remains with the house. Many trees surround the house obscuring it from Dunn Road travelers.

The property is surrounded by: a tavern/restaurant (originally an outbuilding of the house) on the north; Interstate I-270 on the south; acreage under commercial development on the west; and the Reubens and Coco restaurants on the east.
7. #3 MYERS, JOHN B., HOUSE

PRESENT STATUS

Prior to 1974, the Myers House was slated for demolition to allow for the construction of the Interbelt Highway 725 in St. Louis County. Following much opposition by proponents for the retention of the historic house, Missouri State Highway Department officials redesigned the roadway to avoid the house. This redesigning was dependent upon the securement of permanent guarantees that the house would be preserved in the future; such deed restrictions have been filed.

The current owners of the Myers House, Historic Florissant Inc., anticipate a full-scale restoration of the home; work has already begun under the supervision of a restoration contractor.4

FOOTNOTES

2. Statement by Mrs. Rosemary Davison, personal telephone conversation, November 1, 1974. (Mrs. Davison is the City Clerk for Florissant, Missouri, and the coordinator of the Florissant City Survey, a sub-survey of the State Historical Survey and Planning Office.)

8. #1 MYERS, JOHN B., HOUSE

The John B. Myers House built in the late 1860's is one of the few remaining examples of Palladian [Classic Revival] residential types from the Victorian period. The elegant two-story portico with its coupled columns, bracketed details under a classical pediment, is unique in the Midwest. The house plan is also a classic example of its type with large high-ceiling rooms and attached kitchen wing. The full basement with rugged stone walls, brick arches under partition walls, the mantelpieces, frescoes and other details show that this house was no ordinary farmhouse. The site itself, atop a high knoll, provides a favored view to the south and sets this house apart from any other in the county.4

Two residences similar to the Myers House were built during the 1860's in the St. Louis area: the Dr. J.R. Hereford House, Ferguson, 5 (current condition not verified) and the James Clemens, Jr. House, 1849 Cass Avenue, St. Louis.6 The Clemens House (1863) is the most elaborate of the three, its simple Classic design ornamented with Renaissance Revival details (quoins, bracketed sills, complete entablatures over windows and doorways). Cast-iron double porch columns support the two-story portico. The facial features of Mrs. Clemens, who died before the house was built, appear in cast iron above each window and in plaster and marble inside. The Hereford House (1869), on the contrary, is almost a carbon copy of the Myers House -- wood frame construction having been substituted for brick. The high degree of similarity between the two houses, even in the detailing, suggests that the same architect/builder may have been employed by Myers and Hereford. It should also be noted that Dr. Hereford had lived in Florissant prior to moving to Ferguson7 and, therefore, may have been familiar with the Myers House, having its design copied for his own home.
