Survey #  Map #  Address  City and Zip Code  N/A  Greene
70  12  1449 E. Blaine Street  Springfield  65801  N/A  Greene

Architect/Engineer  undetermined

Additional Description
The house features distinctive lintels above the front door and all of the windows. The lintels consist of a mixture of rough and smooth gray limestone, which contrasts with the dark reddish rocks used for the body of the walls. This highly intact bungalow and front boundary wall form a notable grouping, and provide a good example of early rubble construction.

History and Significance
The present owner was told the house was built in 1919 when he bought it. That date is consistent with this style and type of rockwork.

The 1922 Directory lists owners as Merl and Inez Mercer. He was a driver for Rogers and Baldwin.
1933 Sanborn, sheet 239. Solid masonry construction.
Address was 1519 Blaine until mid-20th century.

**Roof Type** 6/6 early or original

**No. of Stories** 2

**Window Opening/ Structure notes**
- steel lintels, concrete sills
- Window Opening: Structure notes

**Condition:** □ excellent □ good □ fair □ poor

**Integrity:** □ little changed □ high □ moderate □ low

**Further Description**
There are rough stone jack arches above many of the window openings, and the doorway is set beneath a full round arch. The design of the house appears to be the work of a professional.

**Environment and outbuildings**
There is a small garage at the end of the driveway which has similar rock walls. The workmanship on the garage is rougher than on the main house.
Additional Description
This house provides a nice combination of native rockwork and Tudor Revival styling. The
general massing and patterns of fenestration are typical of high style Tudor Revival houses,
while the rockwork is decidedly vernacular.

History and Significance
Area not covered in 1933 Sanborn.

The house had the address of 2623 N. Broadway in 1948, at which time it was the home of
G. Elizabeth Waespe, widow of Carl, and Margaret E., a teacher. It is likely Margaret was a
daughter. G. Elizabeth Waespe was listed as the owner.
The address changed to 2635 around 1951, and the two women were still living there in 1955.

Debbie Sheals
City of Springfield
Winter, 2004-2005
Additional Description
The building itself was built before 1933, but the rock facing was not added until the early 1950s.
The rocks used on the walls are quite varied in texture, color and type of stone. Most are split slabs of sandstone, with smooth, bubbled, and rippled surface textures. Others have distinctive fossils, and some worm rock is used as well.

History and Significance
1933 Sanborn, sheet 37. Shows a frame building on this lot, which appears to be this one; the rock was added post-1933. Labeled “S. Broadway Av. Church of Christ.”
Address was 900 Madison.
A check of later Sanborn maps shows that the address changed to 801 S. Broadway around 1948-50, and the rock was added between then and 1956. A large rear addition was apparently put on at the same time the rock was added. The garage is not shown on the 1956 Sanborn map.
This church was surveyed in 1984 as well.

Survey #  Map #  Address  City and Zip Code  vicinity  County

Architect/ Engineer  undetermined

Additional Description
This large park has a significant collection of rock structures, as well as a large early shelter house. The park benefitted from the works of the WPA during the depression, and the letters "WPA" are stamped into the concrete near the rock wall lining the streambed at the south end of the property. That same streambed wall has the words "Phelps Grove Park" spelled out in the rockwork of the wall on the north side of the stream between the two bridges.

History and Significance
This park occupies part of the original 1050 acre farm of John Smith Phelps. It was home to the Springfield Zoo until 1923, when the zoo was moved to its present location on the northern edge of town. One early photo, (dated 1912) shows a large set of entry gates on National of the same type of rubble stone seen elsewhere on the grounds.
1933 Sanborn, sheet 49. The only building or structure recorded in the park on that map is the main shelter house. The map does show that the park at that time extended eastward to S. National, via a narrow strip of land which ran south of Bennet.
A history of the work of mason John Solomon Owen notes that he and his sons, Doc and John, worked in this park for the WPA in the 1930s.

City of Springfield
Prepared by Organization

**Date:** Winter, 2004-2005
Additional Description
A highly intact collection of rock landscape features, as well as a large, impressive rock poolhouse and a large pool. A set of gray limestone gateposts on Campbell bear the date 1925 and the words “Fassnight Park.” A large datestone on the poolhouse bears the date 1927, and notes that the park, the pool, and the building were all paid for “out of a special mill tax fund levied by Springfield.” The stone also noted that the park was “dedicated to recreation and the civic uses of the community.” The pool house is of rubble construction, while the bridges and many other landscape features are faced with sawn slabs. The slab bridges and other features may have been added after the pool and poolhouse.

History and Significance
This is one of the city’s oldest pools and poolhouses. It is also one of the more cohesive collections of historic rock buildings and structures in the survey group.

1933 Sanborn, sheet 50. Map shows the pool house (rock structure), the pool, and a rock pump house east of the pool. (The pump house is no longer extant.)

Window Opening/ Structure notes

Further Description
Just the front wall is rock; it has a number of ornamental figures, including two-color sunbursts, and plant shapes made with smooth limestone pieces. Some marble chips are used as well. Masonry attributed to John Solomon Owen.

Environment and outbuildings
Next to a large feed company complex, which includes several large grain elevators to the south. Now part of that property, was separate until around 1970.
Additional Description
Ornamental forms in the rockwork include starburst of stone chips with bricks or rounded rocks in the center, arching shapes of slivers of rock, and branched plant figures of thin strips of sawn limestone. Base rock is rubble of varying sizes, all with reddish tints.

This large, metal-sheathed building has a post-1950s addition on the back wall. The rock may have been added to the front after the building was finished. All door and window openings appear to be intact; the wall sheathing on secondary walls is mostly newer.

History and Significance
This is identified as the work of John Solomon Owen in an article written by his granddaughter, Marilyn K. Smith.
Buildings in the survey group with similar ornamental motifs in the rock include the Temmons Temple, at 934 E. Webster, and the Charles Braun House at 1557 S. Kimbrough. The church has several sunbursts that are nearly identical and the house has the same type of branched plant form.
1933 Sanborn, sheet 215. This building was in place, and shared the lot with a "bulk oil station", located to the east of it. The main block of the building has a metal structure; just the facade is masonry. It was labeled as "Tile Stone Faced" on the Sanborn. The building was labeled "Boiler and Sheet Iron Works." Address was the same in 1933.

Further Description
Rough fieldstone/ boulder walls with sawn concrete slab edging. Limestone is used to form diamond shaped accents in walls also, and fieldstone includes starburst patterns. This house may have been built from professionally designed plans.

Environment and outbuildings
A small rock garage behind this house was part of this property when new. It is now part of a neighboring lot.

No. of Buildings 2  No. of Structures 0  No. Contributing 2  No. Contributing 0  Contractor / Builder undetermined
Mason John Solomon Owen
Prepared by Debbie Sheals
City of Springfield
Organization Winter, 2004-2005
Additional Description

The house utilizes a combination of rough, reddish rubble and light, smooth limestone that is distinctive, and seen on several other survey properties. The limestone pieces are smooth-sawn on most sides with rough edges: a couple of the stones on the porch posts have rock faces and toothed margins typical of much more high-style stone work: they may be salvaged. There is also at least one starburst in the rubble work similar to those made by John Solomon Owen. (Other buildings he may have worked on include 700 Central, and 1557 S. Kimbrough; the later is very close to this one.)

History and Significance

City Directories show that this house was built between 1926 and 1932, probably for F. Roscoe Hawkins who lived here from before 1932 to after 1955.
1933 Sanborn, sheet 42. This lot also had a rock garage to the rear of the lot. The address was 1557 West Drive. (an earlier address was 7 West Dirvie.) The 1933 map also showed a rock and tile or brick building to the north, at the back of what was 1563 West Drive. It was labeled "Contractors W. H. O. 1563-1/2 ". It may have been used during park upgrades. One source noted that masons working in the park across the street did several of the rock houses in the area.

Environment and outbuildings
On the early route of Route 66; another commercial garage around the corner (210 Nettleton) has a similar date stone and rock construction methods.

Further Description
The building is two stories tall on one end, with single story service bays along one side. The ground floor is commercial, and the second floor may be residential. Date stone in second floor facade reads “Claud and Esther Carsten 1947”; it matches the date stone on 210 Nettleton.

Architect/Engineer: undetermined

Additional Description
The west wall of the second story is frame; the structure for the entire building is likely frame, with stone veneer. The veneer covers all other walls, including those on the back of the building. The service bays have doors on the back wall as well as the south wall, which faces the road. The road in front was Route 66 when this building was built.

History and Significance
City directories show that this building and the one at 210 N. Nettleton were owned by the Carsten family for several years. In 1955 for example, Alvin A. Carsten operated a shop at this location and lived at 210 Nettleton.

1956 Sanborn, sheet 28.

little changed high moderate low

Porch or Storefront Type Comments

Construction Date:

*1938

* = construction date is based upon specific source(s).

Environment and outbuildings

This is one of two rock outbuildings in Smith Park; there is also a large frame house. Rock structures in the park include retaining walls along the stream and tennis courts.

Further Description

Concrete date stone on wall reads “NYA 1938”. The walls feature a combination of buff colored sandstone edged with pale gray limestone. The edge blocks are more squared than those used on the body of the walls.

NOTE: See also Inventory #90.
**Survey #** | **Map #** | **Address** | **City and Zip Code** | **vicinity** | **County**
---|---|---|---|---|---
89 | 25 | 1536 E. Division Street | Springfield 65801 | N/A | Greene

**Architect/Engineer**: undetermined

**Additional Description**

This is one of the more styled of the survey properties, and has a notable level of finish for a support building.

**History and Significance**

Not covered by the 1933 Sanborn; appears to be in what was then the "Glenstone Public Golf Course."

By the time of the 1956 Sanborn, it appears that area was part of a large government, probably military, complex.

**Sources**

- Site visit
- Sanborn Fire Insurance Maps, 1910-1957

Condition: □ excellent □ good □ fair □ poor
Integrity: □ little changed □ high □ moderate □ low

Further Description
The walls have a variety of stone types, and include rough chunks of concrete. Large, roughly squared, blocks of limestone mark the front corners. The large openings of the facade contain a mix of paneled wood doors and newer framing; this may have been a garage.

Environment and outbuildings
This is near the Division Street entrance of Smith Park, close to the garage that is also recorded here. See inventory form # 89 for a resource count and description.

Further Description  
Flower motif of the chimney rockwork seen on several other study properties. The rock on the house includes sawn limestone, worm rock and sandstone fieldstone. It is possible that this stone was added after the house was built. A rear addition has similar rockwork.

Further Description

The grounds around the Zoo contain a cohesive collection of stone landscape structures, including retaining walls and gateposts, stairways, picnic shelters, and barbecue pits. The zoo grounds were not evaluated.

Environment and outbuildings

Mature trees and established landscaping enhance the grounds, and there are few modern intrusions.

**Construction Date:** ca. 1950 (rock added)

= construction date is based upon specific source(s)

**Further Description**

The rock and brick facing on this house could have been added later. The porch features two colors of brick, with glass blocks and rock faced concrete blocks. The body of the walls are slab and boulder, accented with two color brick corners.

**Environment and outbuildings**

Just south of the Grant Beach survey area. Looks like an outbuilding was recently demolished in the back yard.

111 23 825 N. Grant Avenue Springfield 65801 N/A Greene
Survey # Map # Address City and Zip Code vicinity County

Architect/ Engineer undetermined

Additional Description
Good example of an earlier house that was updated with rock facing at a later date. It is also a good example of the combination of brick and glass blocks along with the rock.
The style of the rockwork is similar to that on buildings attributed to Ed Waddell. Waddell is said to have done the very similar rockwork on the Trail's End Motel, on Route 66 in Springfield, in 1948.

History and Significance
Directories:
1933 Sanborn, sheet 212. There was a frame house with a large masonry garage at the back of the lot. The house there has the same footprint as this one, and appears to be the same house, the address was 855 Grant.
1948-1956 Sanborn edits show that the veneer was added to this house between 1948 and 1956.
The veneer was probably added by Mrs. Estes, to cut down on maintenance costs.

Survey # Map # Address City and Zip Code vicinity County

Architect/Engineer undetermined

Additional Description
An unusual combination of a curving glass block wall and more traditional rockwork.
This house is a near twin to the house next door, at 2621 N. Grant.

History and Significance
Area not covered in 1933 or 1956 Sanborn.
Mrs. Blasi's family built the house and she has lived in it ever since. Other family members
lived in the house next door, at 2621 N. Grant. That house was built at the same time as this
one and is very similar.
Mrs. Blasi remembers that the house was built by a retired Army Colonel, but did not remeber
his name.
A large frame house south of this was owned by her parents when this one was built. That
house has a long rock wall in front of it now.

Integrity: ☑ little changed ☐ high ☐ moderate ☐ low

Further Description
A large well-crafted Bungalow with a screened porch and concrete or limestone caps on the porch rails and walls. The walls feature a mix of stone types, including sandstone and chert. Windows, dormer wall shingles and other features are highly intact.

Environment and outbuildings
A garage at the end of the driveway has similar rock walls, but appears to be much newer. The walls of the garage are of poured concrete, with rubble facing.

Prepared by Organization Date
Missouri Historic Property Inventory Form
State Historic Preservation Office of Missouri
P.O. Box 176, Jefferson City, Missouri 65102

Additional Description
This is one of the larger intact rubblestone bungalows of the study group. The garage, although newer, contributes to the overall grouping. The property also retains a feel for what was probably a rural setting when the house was built.

History and Significance
There is little information about the early owner of this property, as it was out of the city limits for much of its early history.

The area was not covered in the 1933 or 1956 Sanborn maps. A 1927 land atlas was unclear as to ownership of this land.

Survey # Map # Address City and Zip Code vicinity County

Architect/Engineer: undetermined

Additional Description
Although one article about stone mason John Owen referred to this as a grocery store, it appears to have always served a residential function. Sanborns indicate that the grocery store at this location was actually just east of this house.

History and Significance
1933 Sanborn, sheet 229.
A frame store was located on the lot just east of this, and this site was occupied by a small frame house. The address was 1206 High St.
In the 1956 Sanborn, this house was shown as frame, veneered with stone, and the garage was shown as tile with stone facing. It is likely the garage was built when the rock was added to the house.
The 1955 directory shows that Ivan Letterman was living here, but did not own the property.

Environment and outbuildings

This house was built in 1941 by Clyde Skidmore; his wife still lives there. (He had never done rock work before.) The rock is from a creek at Fair Grove; Mr. Skidmore split the slabs to face the house. Two-color brick accents openings and wall edges.

Additional Description
The joints between the stones are beaded on the side walls, and flat beneath the porch. The porch is a later addition. The front door sits within an arched opening in the stone facing. A rear addition has frame and brick walls.

History and Significance
Notable as a house built by the family who has lived in it since it was completed in 1941. It is also a good example of high quality rock work, done by an inexperienced builder. It is one of only a few houses in the study group to be occupied by an original owner.

The Skidmore’s operated an upholstery business for decades. Their shop was at 1821 N. Broadway in 1952.

### Additional Description

Nice example of rubble construction. The joints of this house are almost flush with the surface of the wall stones, which is unusual for rubble buildings in the study group.

### History and Significance

Area not covered in 1933 or 1956 Sanborns, so the early street address is not known. (All or most street numbers changed around 1948-1950.) Eaton Lordis is listed as the owner of the property in 1948 and 1955, but is not in the 1944 city phone book.

Further Description
A large, high-style example of Ozark rock masonry. "1921" is carved into the keystone above the front steps. The arches on the porch are of poured concrete. The light-colored stone is sawn limestone and the darker stones are sandstone fieldstone.

Environment and outbuildings
A small garage to the rear is about the same age as the house. It has simpler rockwork walls.

Page 1 of 2
**Additional Description**

One of the largest and most elaborate examples of fieldstone construction with sawn limestone edging. Highly intact and quite impressive.

The arches of the porch are of poured concrete, and the porch floor is made of large blocks of sawn limestone. The walls of the house are very thick, and appear to be solid masonry.

**History and Significance**

Area not covered in 1933 Sanborn. (Out of city limits.) In the city limits in 1956, but not covered.

1955, Emil A. Hoffman was the owner of this house.

1952 E. A. Hoffman was listed as living at RFD 6, possibly this same house. He was not in the 1948 phone book.

Page 1 of 2
Additional Description

The former barn now has a large frame addition on the facade. It now has a separate address, 2629 N. Howard. There is some newer siding on a side porch and a rear addition; overall the house is quite intact.

History and Significance

The house was built in 1918, per the current owner. She had heard that it was built by a man and his sons, but did not remember their name.

City directories show that it was owed by Cornelius Pering and later, Amanda Pering, from before 1922 until after 1955. They and their sons are the likely builders.

The owner thought the barn was converted to rental residential just after the property left the original owners’ family.

This area was not covered in 1933 or 1956 Sanborns; it was still just barely out of the city limits in the 1950s. Up until around 1950, the address was 2525 N. Howard.

A rock garage to the rear is now attached, but appears to have been separate when new.

High quality rock work. The house has larger blocks at the edges and smaller more random shapes on the body of the walls. The darker brown rocks surfaces are weathered, and the buff coloring is on surfaces which appear to have been split when the rock was applied.

Debbie Sheals, City of Springfield
Prepared by Organization Date
Winter, 2004-2005
Additional Description
One of the more distinctive examples of rockwork which combines dark, weathered surfaces with the lighter inner surfaces exposed when thick slabs were split. The dark painting on the wide mortar joints provides further contrast.

History and Significance
Area not covered in 1933 or 1956 Sanborn.
City directories indicate that this part of the street was vacant in 1940 and 1946. The first known owner of the property is Eugene L. Lyons, who owned it in 1948 and 1955, according to directory entries.

Further Description
Some of the finest rock work of the study group. Other figures include a bird, an arrowhead and a nearly perfect circle. Windows are topped with jack arches, and the arches on the porch are concrete.

Environment and outbuildings
There is a large two car garage and a smaller frame shed in the back yard.

Debbie Sheals  City of Springfield
Prepared by  Organization  Winter, 2004-2005
Additional Description
The occupant thought the house was built in the teens and the rock was added later. The rock appears to be original, however, and historic records are inconclusive as to a construction date. The rock was definitely in place by the time the property was mapped for the 1956 Sanborn.

History and Significance
1933 Sanborn, sheet 237 vacant lot, with no address. 1956 Sanborn, this house had its current address, and note it was veneered, as were several other houses on the block.
1927-1931 directories. Claude (or Claud) Campbell at 2221 N. Kellet
1933-1940 directories and phone books, Claude Campbell at 2229 N. Kellet
1948 directory, Claude J. Campbell, owner, address was 2331 N. Kellet. (present address)
1955 directory, Claude Campbell, owner, address was 2331 N. Kellet.
A likely interpretation of the above information is that Mr. Campbell lived in another house on Kellet before the mid 1930s, when he moved to this newly built residence, which got a new address around 1949.

Further Description
The storefront and interior are highly intact. The rock walls are as well, but have been painted in places, and the joints have been repainted with wider profiles. It appears that the joints were once raked. This was built as a grocery store, and has housed Missouri Rug since 1941.

Environment and outbuildings
In a largely residential area now. Was on the edge of town when new. There is a newer addition to the back of the building.

Debbie Sheals City of Springfield
Prepared by Winter, 2004-2005
Organization Date
Additional Description

The highly intact interior and storefront easily outweigh integrity issues associated with exterior repainting. This is the largest intact commercial property in the study group. The interior does not appear to have seen any changes of note since the building was erected. Original features include a pressed metal ceiling and a wood and glass storefront.

History and Significance

The current owner of the store has heard that the rocks for the building came from the Calhoun farm. Directories indicate it was built by or for M. H. Wills, who operated the grocery store and lived on the property until around 1931. Hamlet Goudelock owned it in 1932, and operated the grocery store there until the property was purchased by Missouri Rug Cleaners in 1941. 1933 Sanborn, sheet 35. Address was 840 Waverly. This building shared a lot with a frame house at 836 Waverly. The map shows some brick or tile on the back wall; the rest of the building has a rock structure.

Page 1 of 2
Additional Description
The rubble walls and the form of the building are similar to those of a house nearby, at 612 Portland.
Although the owner thought it had been built around 1906, construction methods and styling are more typical of the 1920s or 1930s.

History and Significance
1933 Sanborn, sheet 50. The map showed a frame garage and another long frame outbuilding to the rear. The lot was much larger than it is now, and included two other large frame houses to the north. Address was 1785 S. Kimbrough.
The address 1785 first showed up in city directories between 1922 and 1927. Isaac D. and Hulda Casebeer were the owner/occupants in 1927. He is listed in an earlier directory as a printer at the Springfield Laborer.
The house was rented to Wm. Eastern in 1932, and owned by Eugene E. Heer in 1937.
The house was owned by prominent local oil dealer Charles Baum in 1955.

**Further Description**

This is now a duplex, but was built as a single family house. The conversion did not make major changes, however, and all or most interior woodwork etc. remains. The concrete window surrounds appear to have been poured in place, as do the concrete edge pieces.

---

**Environment and outbuildings**

Close to the Mid-Town Historic District, facing Washington Park. There is a poured concrete retaining wall along the street sides of this corner lot.

Further Description
The house has rear dormers and second floor living space. It is probably the same age as the
nearly identical house next door, which was also built ca. 1938. An attached garage on the side of
the house is original. There are simple rock jack arches above the front door and windows.

Environment and outbuildings
This house is very like the house to the east, at 1486 McDaniel. They have the same plan, with
slightly different wall rock.
History and Significance
1933 Sanborn, sheet 33. This lot and the one at 1486 were both empty.
1956 Sanborn shows a ca. 1948 paste-in with this house, at the address of 1322 E. McDaniel.
The 1940 city directory shows it to be owned by Thos. Prophet at that time.

Further Description
This form is for the rock gateposts and fence on these lots only. Rock gateposts and walls mark the edges of several yards in this area, which appears to have been a private residential development when new. The house at 1455 Meadowmere, has similar rock on its front porch.

Environment and outbuildings
Similar gateposts and walls include walls a block north and east of these, on Pickwick (N) and Meadowmere (E), a set of posts at Weller and Catalpa, and a pergola at 1507 Meadowmere.

Further Description

Almost, but not quite, too high style for this study, this house is a great early example of free-form rockwork, and one of the most impressive houses in the study group. The walls are solid stone, with the interior plaster applied directly to the rock of the walls.

Environment and outbuildings

There is a small hip roofed garage at the end of the side driveway.

Page 1 of 2
Additional Description
This house is unusual for the study group, in that it is built almost entirely of gray limestone, as opposed to the reddish sandstone and other rock used for many buildings of this genre. It uses roughly tooled squared stones at the corners, and a more free-wheeling mix of shapes for the body of the walls. The arches over the windows are of special note. It is also an unusually early example of Craftsman styling.

History and Significance
1933 Sanborn, sheet 47. The address was 1009 Meadowmere. This became a local landmark in 1991; a plaque inside the house reads "This Craftsman style bungalow was built by H. Edwin Elkins in 1914 for his bride Velma....Mr. Elkins was an architect and bridge designer for the Frisco railroad. He also helped build other historic sites, including the Public Library, Lincoln High School, Shrine Mosque and the gymnasium at Central High School." Local history holds that Velma did not like living so far from what was then the center of town, and they moved after a short time. Directories show that they lived in various houses through the 1920s and 30s, and that he was a foreman for the WPA during the depression. Another article noted that he supervised stonework for the WPA.

**Further Description**

Unusual combination of smooth red brick and rough pale gray limestone. Sawn limestone slabs are used to cap the porch railings.

**Environment and outbuildings**

This has roughly the same plan and roof line as the frame house right next door. A single garage at the end of the driveway has matching masonry.

Further Description

The porch columns appear to be newer, all else is early or original. The mortar joints were a dark red; the color remains in protected areas. Rock jack arches adorn the window tops of the main floor and the basement.

Further Description
This house has a large enclosed back porch which appears to be original. Red and tan wire-cut bricks quoins accent corners and openings, and large fieldstones accent the rock walls. Very large quartz crystals accent the wall of the front porch.

Environment and outbuildings
There is a large two car garage at the back of the lot; it has the same type of rockwork. A house with similar construction detailing is next door, at 1841 E. Monroe.

Page 1 of 2
Additional Description
This is one of the more creative combinations of masonry materials in the study group. The large knobby quartz crystals near the front door are of particular note, and the garage at the back of the house features the same extensive use of bi-color brick accents.

History and Significance
Not covered on the 1933 or 1956 Sanborns.

This house was probably built between 1940 and 1948. Directory listings for the street did not go past the nearby railroad tracks in 1940, but the address did show up in 1948, it appears to have been a rental then. It was occupied by Wayne F. Parnell.
Earl E. Dutton is listed as the owner in 1952 and 1955.

### Additional Description
This house offers one of the more striking contrasts of large, flat, light colored slabs and dark rounded boulders, all set off by dark beaded joints. The sandstone slabs are unusually uniform in color.

### History and Significance
Area not covered in 1933 Sanborn.

1956 Sanborn, sheet 238. This was pasted onto an existing map around 1948, the same year A. Wayne Chittendon was listed as owning and residing at 2557 N. National. (There was no listing for 2558.) That directory noted that A. Wayne Chittendon was a building contractor.

Elton Z. Chittendon was listed as owning and living at 3258 N. National in 1958, and it appears that this is the same house listed in the 1948 directory.

Further Description

This property has in interesting grouping of buildings, which is very similar to the buildings at 2702 National, nearby. The house has a somewhat large side addition and newer windows; all else is intact.

Environment and outbuildings

Besides the house, there is a large double garage and a Gambrel roofed barn, both with matching rockwork walls, and both intact and in good condition.
Additional Description
This area was on the very edge of town when the buildings were built, which may explain the "urban farmstead" layout. There is still a good deal of open land around the back of the property. It is one of three such groupings along this stretch of National.

History and Significance
Area not covered in 1933 or 1956 Sanborn; it was out of the city limits in the 1930s. This address does not show up until the 1958 directory, at which time it was occupied by Robert and Betty Ann Baker. He was a plumber for Kraft at the time, according to the directory.

**Further Description**

This group of buildings could be described as an urban farmstead. The property includes the house, a double garage and shop, and a root cellar stair enclosure; all with the same type of slab rock and brick wall treatments. The south end of the house may be a later addition.

**Environment and outbuildings**

Located near Highway 44, in what was probably a rural setting when the house was built.
Additional Description
This area was on the very edge of town, when the buildings were built, which may explain the urban farmstead layout. It is one of three such groupings along this stretch of National. The root cellar enclosure is the only such structure in the study group.

History and Significance
Area not covered in 1933 or 1956 Sanborn. It was out of city limits in ‘33 and just within in 1956. The address appears to have undergone several changes in the mid-20th century.

1948 Directory: John C. Carter, 2749 N. National (address for this property at the time)
1952 Phone book: John Carter, 2820 N. National
1955 Directory: John C. Carter, owner, 2849 N. National

**Further Description**

The walls feature a combination of reddish fieldstone rubble and light gray limestone. Most of the limestone is relatively unfinished as well. The limestone sills differ in that they are sawn, with rock-faced edges. Porch arches are of poured concrete.

**Environment and outbuildings**

A small double garage to the north looks newer than the house, it has much simpler rockwork, with no limestone accents. Two other outbuildings are newer.

1.5 Gable

Digital photo date and number(s):  
1/05 01-07
Additional Description

Even though this house is just outside the Springfield city limits, its connection to John Solomon Owen merits including it in this group. The limestone arches in the body of the walls are a common ornamental motif used by Owen.

The other two outbuildings are: A large metal shop located right behind (east of) the house, and a smaller frame outbuilding directly east of the garage. Both appear to be less than fifty years old.

History and Significance

This house was built for Judge Ben Diemer, who founded the Greenlawn Cemetery located just to the north. It reportedly replaced an earlier house on the same site, after that building burned. This house and an early office for the cemetery are said to have been built from rocks that had been removed from the cemetery. (The office is still in place on the cemetery grounds.)

The mason, and probable contractor, is said to have been John Solomon Owen, a local mason whose work often included this combination of rock types and the arching ornamental patterns. The house was featured in a local magazine article about Owen, where his daughter identified it as his work. (See sources, below)

Debbie Sheals City of Springfield Winter, 2004-2005
Prepared by Organization Date
Additional Description
The second floor of the north half of this building appears to have been added later, presumably in 1941, the date on the date stone there. The two ground floor sections may have been built at separate times as well. The 1956 Sanborn indicates that the one story section is solid masonry, while the two story section is at least partly veneered.

History and Significance
City directories and phone books show that this building and the one at 1501 College were owned by the Carsten family for several years. In 1955 for example, Alvin A. Carsten operated a shop at 1501 College and lived in this building. In 1948, this building housed the Bush Bros. Cabinet Shop, Loren C. Carsten Garage, and Race Williams Soap and Chemical Shop.

1956 Sanborn, sheet 28.

Describe major features; identify and date changes and alterations

The paint on the joints has weathered off in exposed areas. The porch features a nicely executed jack arch above the main opening. The owner thinks the house was built in the 1910s, but the 1920s seems more likely.

**Further Description**

The rock walls show a great variety of shape and color. Flat slabs are accented with rounded boulders. The garage has beaded joints and brown mortar; others joints are flat. The garage also has more rough rocks in the walls.

**Environment and outbuildings**

This is part of a small grouping which includes the main house, a large rock garage and a smaller second house.

Additional Description
A small notable grouping of similar rock buildings, built at different times. The smaller house, which is the older of the group, has more uniformly colored rock facings than do the other two buildings. It also is different in that it is faced only with slabs, while the other two use a slab and boulder combination.

History and Significance
1933 Sanborn shows this street was named Meredith at the time. The smaller of the two houses may have been in place, at what was then 1929 Meredith. No garage shown. The small house had a solid masonry structure.

On the 1956 Sanborn, these were still separate properties; the main house had an address of 2049 N. Park, and the smaller house was at 2053. The main house was still just a frame building at that time.

The 1955 city directory shows that the main house was under construction at that time; it is assumed the veneer was added as a final step in that construction process.

Thenia E. Vaughn was the owner of the smaller house in 1948 and 1955. Ivory A. Campbell owned the lot for the larger house in 1948.

Debbie Sheals City of Springfield Winter, 2004-2005
Prepared by Organization Date
Additional Description
A relatively late example of rubble construction, this house is highly intact and in good condition. It is similar in construction to the rock house at 1557 S. Kimbrough, which was built ca. 1925 less than a block to the west.

History and Significance
1933 Sanborn, sheet 50. This house occupied a much larger lot in 1933, and it was the only house on the block facing Portland. There was also a rock garage at the end of the driveway next to the house.
The address was 512 Portland.
There are no directory listings for this lot in 1931, but the house was completed by the time of the 1933 Sanborn.
Harry Cox was listed as the owner in 1940, and it was in Isabelle Cox's name from the late 1940s into the mid-1950s or later.

Additional Description
The corner entry form is common to neighborhood commercial buildings in the area.

History and Significance
1933 Sanborn, sheet 236. There was a smaller frame store at this location. Address was 2100 Robberson. 1956, this store in place, veneer construction.

The 1937 City directory shows this as the Mack Pamplin Grocery Store; Pamplin was the owner of the property.

Further Description
This wall is in the yard of a ca. 1910 house. The fence has taller corner posts and poured concrete caps. Rockwork includes an ornamental combination of large boulders and small limestone chips. Similar to other rock work by John Solomon Owen.

Environment and outbuildings
It runs along the side of the yard, and there is a small post near the driveway at the back of the lot.

Page 1 of 2
Additional Description

The different colors of the wall rocks are a result of the mason's choice of rock surface. The entire house is faced with split field stones—the weathered side of the stones are the dark color used for the lower part of the walls, while the lighter, newly split surfaces, were used for the upper walls. This is notably high quality rockwork for the study group.

The rockwork on the back building is much less refined, and appears to be all fieldstone.

History and Significance

Area not covered in 1933 or 1956 Sanborn.

Street numbers on this street changed several times on the 1930s; this was #1953-1953-1/2 in the late 1930s early 1940s.

The first known resident of the house is William Ingraham, who was renting the property in 1831, per the city directory.

Roy York, who lived there in 1937, is the first known owner.

Directories and phone books show that Thos Simms had his home and plumbing business here in 1940, and that Chas. T. Lanning was living at number 1953-1/2, presumably in the back building.

Jas A. Brashears owned the property in the late 1940s and early 1950s.

**Further Description**

The gateposts facing National read "Silver Springs Park 1933." There is a wide variety of rock work in the park. Gateposts are of slab with beaded joints, retaining walls for the stream are of mixed stone with wide flat tucked joints, and other structures have flat joints and figures of rock.

**Environment and Outbuildings**

Historic rock structures include: 2 sets of gateposts, an amphitheater, horseshoe pits, BBQ grills, stream bed walls, springhead enclosure. A shelter house and pool house are newer.

Additional Description

This is the only park of the survey group to include an amphitheater, which is tucked into the hillside, with rock walls forming curved terraces. Those walls also have short rounded rock posts, most of which are ornamented with sunburst designs in the rockwork. The horseshoe pits are also enclosed with a low rock wall, and the entire long path of the stream has rock work lining its banks. Similar rock lining marks the active springhead, which feeds into the stream near the playground and shelter house.

Other structures include a ball diamond and basketball court.

History and Significance

1933 Sanborn, sheets 216, 222.
Only one building was shown in the park, a frame “Dance Hall” located east of the current park boundary.

1956 Sanborn, sheets 216-222. The dance hall was labeled “Recreation Center, Colored” and a new pool and rock bathhouse had been added. (That bath house is no longer extant.) A history of Springfield noted that “Silver Springs Park was purchased in 1938 for use by the African-American community. It was equipped with a swimming pool, tennis court, ball diamond, playground equipment and a community building.” (“Crossroads,” p. 90.)

Further Description

The park features a cohesive collection of rock structures and buildings, including barbecue grills, park shelters, retaining walls and steps, a large roller rink, and entry gates. One of the barbecue grills has a concrete plaque that reads "NYA 1939".

Environment and outbuildings

There are over a dozen different intact rock structures and buildings that appear to be over fifty years old.

Debbie Sheals  City of Springfield  Winter, 2004-2005
Prepared by Organization Date
Construction Date: ca. 1930s

Further Description
The sawn limestone on the house appears to be a veneer, and may have been added later. A formal water table at the front of the house is unusual.

Environment and outbuildings
A newer shed is at the back of the lot. There are rock posts in the yard as well.

22 16 3201 W. Turner Street Springfield 65801 N/A Greene
Survey # Map # Address City and Zip Code vicinity County

Architect/Engineer undetermined

Additional Description
A fairly unusual application of flat, sawn limestone pieces used to veneer an existing house.

History and Significance
Area not covered in 1933 or 1956 Sanborn. Tyler does not appear in any directories up to 1962.
An article about Clyde Wilson, who built the house just south of this one in the mid-1960s, noted that he had added limestone pieces to at least one existing house in the past. It seems likely that he did this one as well. A rock-faced church around the corner has similar detailing, and may be also be his work.

Further Description:

Wall masonry includes glass slag, ceramic and marble floor tiles, sandstone and limestone. Some of the wall stones are scored with various patterns, and the layout of the masonry includes many figures and ornamental patterns. "W" is worked into the wall over the front door.

Environment and Outbuildings:

There is a good deal of distinctive masonry in this area, including wildly varied polychromatic brick. One small frame outbuilding sits behind the house.

No. of Structures 0  No. Contributing 0

Wilkerson, Clyde Contractor / Builder

Wilkerson, Clyde Mason

Debbie Sheals City of Springfield Winter, 2004-2005

Prepared by Organization Date
Additional Description
This is a late example and slightly different type of masonry, worth including in this study for the intricate patterns and wide variety of materials used.
In addition to the “W” and the pattern shown on page one of this form, there is a large flower centered in the side elevation, and varied, ornate patterns above most door and window openings.

History and Significance
Area not covered in 1933 or 1956 Sanborn. Tyler does not appear in any directories up to 1962.
An article about builder and first owner Clyde Wilson that appeared in "Springfield!" magazine noted that he used a special table saw to cut the stones for this house, and that he used stones from as far away as the Rocky Mountains to adorn the walls. The article also noted that he had done other construction and masonry work over the years, including building a pair of brightly patterned brick houses directly across the street from this one. The article noted that he added limestone pieces to an existing house elsewhere prior to building this one. The house directly north of this one, at 3201 Tyler, may have been done by him as well, and a rock-faced church around the corner has similar detailing.

Additional Description
Date stone on the front corner reads “Church of God in Christ, Erected 1932, Eld. C. Timmons Pastor”. The rockwork on this church features several ornamental figures and shapes. There are several places with curving rows formed by stacking long thin chips of stone to form bands. There are also several full and half circle sunburst patterns, in a wide range of sizes. The centers for those ornaments include rounded stones of the same color and even reddish blocks that appear to be cast-off brick pieces. That combination of a brick-red center with limestone chips in a sunburst pattern is also found on the nearby L. J. Kent Building, on Central Avenue. These two are almost surely the work of the same mason.

History and Significance
1933 Sanborn, sheet 215
Labeled “Church of God in Christ”, with a street address of 1049 Texas. There were also two small frame houses and two frame outbuildings on the lot.

A sign over the entrance porch on the church today reads “Church of God in Christ Temmons Temple.”

Further Description
The main house was built in 1949, and was expanded eastward around 1965. The house is still occupied by its builder, Mr. George Quinn, and his family. The walls are 8" thick. Mr. Quinn has painted the mortar joints 2 or 3 times since he built the house.

Environment and outbuildings
This house sits near the city limits in a largely undeveloped area. There is a matching stone garage set back behind and to the side of the house.

Survey # Map # Address City and Zip Code vicinity County

Architect/ Engineer undetermined

Additional Description
All sections of the house have concrete footings that are 32" deep and 24" wide. The walls are constructed of a layer of oak studs, faced with sheathing and 30# felt, against which Mr. Quinn laid up an 8 inch thick masonry wall. The rocks are on the outside of the wall, and the inside is of poured concrete. Metal ties were added for reinforcement, and Mr. Quinn used a trowel to measure the thickness of the wall as he worked his way up.

History and Significance
Out of area covered by Sanborns.
George Quinn built this house in 1949, and lives there yet today. He learned how to do the rockwork from a local minister named James Milton, and got the rock for the walls from a creekbed nearby.

Notable as a house built by an inexperienced builder who followed local building tradition and used readily available materials.
Special also because it is still occupied by the builder and his family.
